Principles of Macroeconomics for AP® Courses PublicAffairs
"A truly excellent book that explains where our pandemic response went wrong, and how we can understand those failings using the tools of economics." —Tyler Cowen, Holbert L. Harris Chair of Economics at George Mason University and coauthor of the blog Marginal Revolution Have you ever stopped to wonder why hand sanitizer was missing from your pharmacy for months after the COVID-19 pandemic hit? Why some employers and employees were arguing over workers being re-hired during the first COVID-19 lockdown? Why passenger airlines were able to get their own ring-fenced bailout from Congress? Economics in One Virus answers all these pandemic-related questions and many

more, drawing on the dramatic events of 2020 to bring to life some of the most important principles of economic thought. Packed with supporting data and the best new academic evidence, those uninitiated in economics will be given a crash-course in the subject through the applied case-study of the COVID-19 pandemic, to help explain everything from why the U.S. was underprepared for the pandemic to how economists go about valuing the lives saved from lockdowns. After digesting this highly readable, fast-paced, and provocative virus-themed economic tour, readers will be able to make much better sense of the events that they've lived through. Perhaps more importantly, the insights on everything from the role of the price mechanism to trade and specialization will grant even those wholly new to economics the skills to think like an economist in their own lives and when evaluating the choices of their political leaders.

In readable language, he shows how to critique economic policies in terms of the incentives they create, rather than the goals they proclaim. With clear explanations of the entire field, from rent control and the rise and fall of businesses to the international balance of payments, this is the first book for anyone who wishes to understand how the economy functions. This fifth edition includes

a new chapter explaining the reasons for large differences of wealth and income between nations. Drawing on lively examples from around the world and from centuries of history, Sowell explains basic economic principles for the general public in plain English.

This textbook addresses the main economic principles required by agricultural economists involved in rural development. The principles of 'micro-economics' or 'price-theory' are of relevance to economists everywhere, but this book reinforces the message of their relevance for rural development by explaining the theory in the specific context of the agricultural and food sectors of developing countries. Hypothetical and actual empirical illustrations drawn almost exclusively from such countries distinguish this book from other economic principles texts that draw their examples almost invariably from industrialised

countries, and also from books more oriented to the issue of rural development. The first half of the book deals with the underlying principles of production, supply and demand. These are essential tools for the study and management of the agricultural sector and food markets. In the second half, supply and demand are brought together into a chapter of equilibrium and exchange. This is followed by chapters on trade and the theory of economic welfare. In the final chapter it is shown that much of the material in the earlier chapters can be combined by agricultural economists into a system for analysing and comparing the effects of alternative agricultural policies. The ability of agricultural economics to provide a consistent framework for the analysis of policy problems thus enables it to make a key contribution to rural development.

The General Theory of Employment, Interest, and Money, written by legendary author John Maynard Keynes is widely considered to be one of the top 100 greatest books of all time. This masterpiece was published right after the Great Depression. It sought to bring about a revolution, commonly referred to as the 'Keynesian Revolution', in the way economists thought—especially challenging the proposition that a market economy tends naturally to restore itself to full employment on its own. Regarded widely as the cornerstone of Keynesian thought, this book challenged the established classical economics and introduced new concepts. 'The General Theory of Employment, Interest, and Money' transformed economics and changed the face of modern macroeconomics. Keynes' argument is based on the idea that the level of employment is not determined by the price of labour, but by the spending of money. It gave way to an entirely new approach where employment, inflation and the market economy are concerned.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities

can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be

organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, *THE COMMANDING HEIGHTS* shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.

The major aim of this thesis is to formulate the principles of economic justice and propose a just economic system which would critically guide Christian praxis in a secular pluralist society in general and Korea in particular. It is done through a critical dialogue with major Western and Latin American theologians and thinkers. First we have a brief historical overview of the socio-political condition in Korea and the Korean Protestant Church's response to show the importance of the question of economic

justice for Korean Christians and the impasse in which they find themselves (Chapter 1). Our critical dialogue with the Western and Latin American thinkers starts with the consideration of the most fundamental issue of theological method (chapter 2). We establish our own theological method which involves the reciprocal relationship between theory and praxis at all levels of enquiry and the reciprocal interactions between philosophical, socio-analytic and hermeneutic mediations. After establishing the legitimacy of the notion of economic justice (chapter 3), we formulate our own principles of economic justice employing the

philosophical method of hypothetical reflective equilibrium (chapter 4). We then propose democratic communitarianism as an alternative just economic system through a critical appropriation of the Marxist theory of exploitation and capitalist mainstream economics (chapter 5). We then elaborate theological views of the person, society (chapter 6) and the principles of economic justice underpinning the preceding discussions (chapter 7). Finally we return to our own context, Korea, to show the relevance of democratic communitarianism and its corresponding principles of economic justice (chapter 8).
