An authoritative and entertaining exploration of Australia's distinctive birds and their unheralded role in global evolution. Renowned for its gallery of unusual mammals,

Australia is also a land of extraordinary birds. But unlike the mammals, the birds of Australia flew beyond the continent's boundaries and around the globe many millions of years ago. This eye-opening book tells the dynamic but little-known story of how Australia provided the world with songbirds and parrots, among other bird groups, why Australian birds wield

surprising ecological power, how Australia became a major evolutionary center, and why scientific biases have hindered recognition of these discoveries. From violent, swooping magpies to tool-making cockatoos, Australia's birds are strikingly different from birds of other lands—often more intelligent and aggressive, often larger and longer-

lived. Tim Low, a renowned biologist with a rare storytelling gift, here presents the amazing evolutionary history of Australia's birds. The story of the birds, it turns out, is inseparable from the story of the continent itself and also the people who inhabit it.

What name could be a more apt description of Australia than 'The Land of Parrots', a name inspired by late sixteenth-century maps showing a southern region labelled 'Psittacorum regio'? This beautiful book takes a close look at parrots in Australia, from the first published illustration of an Australian parrot—a Rainbow Lorikeet collected live on Cook's 1770 voyage—to William T. Cooper's twentieth-century watercolour of the elusive Night Parrot. With

introductory essays by ornithologist Penny Olsen, *Flocks of Colour* covers two and a quarter centuries of discovery and illustration of Australia's avifauna. It features a rich portfolio of images of all the Australian parrots, by various artists including John Gould, Edward Lear, Neville W. Cayley and William T. Cooper, selected from the collections of the National Library of Australia, The foreword is by Joseph Forshaw, a world expert on the parrot family.

This second edition of *Australian Bird Names* is a completely updated checklist of Australian birds and the meanings behind their common and scientific names, which may be useful, useless or downright misleading! For each species, the authors examine the many-and-varied common names and full scientific name, with derivation, translation and a guide to pronunciation. Stories behind the name are included, as well as relevant aspects of

biology, conservation and history. Original descriptions, translated by the authors, have been sourced for many species. As well as being a book about names, this is a book about the history of the ever-developing understanding of birds, about the people who contributed to this understanding and, most of all, about the birds themselves. This second edition has been revised to follow current taxonomy and understanding of the relationships between

families, genera and species. It contains new taxa, updated text and new vagrants and will be interesting reading for anyone with a love of birds, words or the history of Australian biology and bird-watching.

For well over a century, the Night Parrot lured its seekers into Australia's vast, arid outback. From the beginning it was a mysterious bird. Fewer than 30 specimens were collected before it all but disappeared, offering only

fleeting glimpses and the occasional mummified body as proof of its continued existence. Protected by spinifex and darkness, the parrot attained almost mythical status: a challenge to birdwatchers and an inspiration to poets, novelists and artists. Night Parrot documents the competitiveness and secrecy, the triumphs and adventures of the history of the bird and its followers, culminating in the recent discovery of live birds at a few widely scattered locations. It

describes what we are now unravelling about the mysteries of its biology and ecology and what is still left to learn. Complemented by guest essays, illustrations and photographs from a wide variety of sources, this book sheds light on Australia's most elusive bird.

In her comprehensive and carefully crafted book, Gisela Kaplan demonstrates how intelligent and emotional Australian birds can be. She describes complex behaviours such as grieving, deception, problem solving and the use of tools. Many Australian birds cooperate and defend each other, and exceptional ones go fishing by throwing

breadcrumbs in the water, extract poisonous parts from prey and use tools to crack open eggshells and mussels. The author brings together evidence of many such cognitive abilities, suggesting plausible reasons for their appearance in Australian birds. *Bird Minds* is the first attempt to shine a critical and scientific light on the cognitive behaviour of Australian land birds. In this fascinating volume, the author also presents recent changes in our understanding of the

avian brain and links these to life histories and longevity. Following on from Gisela's well-received books on the Australian Magpie and the Tawny Frogmouth, as well as two earlier titles on birds, *Bird Minds* contends that the unique and often difficult conditions of Australia's environment have been crucial for the evolution of unusual complexities in avian cognition and behaviour.

Australian Parrots and Cockatoos

Since the sixties the interest in Australian

Parakeets has increased enormously. Although initially many aviculturists could not afford to buy most species, they can now be found anywhere. All these colorful birds in our aviaries make for a rewarding hobby. In this book the Australian Parakeets are conveniently classified according to genus, species and subspecies, and in extensive description of the various characteristics, places of origin and way of life is given. The author also pays careful attention to

the various aspects of keeding, feeding and breeding the birds and furthermore describes the recently occurring mutations. The brilliant colour photographs of all (sub)species made by Cees Scholtz are an essential addition to the text. All this detail has led to a particularly instructive and interesting book, in which the author describes all (sub)species in a most lucid and knowledgeable manner. *Australian Bird Names* Parrots and finches, with their spectacularly

colourful plumage, are the birds most commonly kept in cages and aviaries. This lavishly illustrated book, with lifelike watercolour paintings and pencil drawings by the author, will provide many hours of pleasure for both the professional and amateur ornithologist.

This book is the most up-to-date guide to Australian birds available. Written in everyday language, with crisp, brilliant digital images taken in the wild, this authoritative guide includes: - The first entry and photograph of the previously believed extinct Night Parrot - The recently recognised as a full specie Lesser Sooty

Owl - The Thick-billed Grasswren - All seven species of Quail-thrush - The Paperbark Flycatcher - Rare photographs of the male Superb Lyrebird in courtship display - The Bustard in courtship plumage - The male Magnificent Riflebird in its courtship dance - The first photograph of a nesting colony of Australian Swiftlets taken in a deep, dark cave in tropical Queensland . . . and much more. Beyond a field guide, this book is divided into 27 chapters, with each chapter opening

with fascinating background information. The easily accessible information on each bird includes: common and scientific names, size, description, behaviour, preferred habitat, feeding habits, voice, status and breeding. Distribution maps are arranged next to the photographic illustrations of the bird. A binocular icon indicates 'hot spots' to find particular birds. All wild birds that have been regularly recorded on the Australian mainland, Tasmania and offshore

continental islands and oceans, including sub-species where the differences are recognisable in the field, have been included and photographed. Features over 1400 photographs by some of Australia's best wildlife photographers, including Colin Cock, Michael Schmid, Eric Sohn Joo Tan, Duade Patton, John Anderson, Alwyn Simple, Peter Jacobs, Andrew Bell, Tony Ashton, Nolan Caldwell, Chris Wiley, Maureen Goninan, Marlene Lyelle and George Adams to name

but a few. This book will be enjoyed by beginners and seasoned 'birdos' alike.
