Clifford Algebra And Spinor Valued Functions A Function ... Introduction and basic properties. A Clifford algebra is a unital associative algebra that contains and is generated by a vector space V over a field K, where V is equipped with a quadratic form $Q : V \rightarrow K$. The Clifford algebra $Cl(V, Q)$ is the "freest" algebra generated by V subject to the condition $v^2 = -Q(v)$, where the product on the left is that of the algebra, and the 1 is its multiplicative ... Clifford algebra - Wikipedia The Clifford algebra is an associative algebra that can be constructed from Euclidean space and its inner product in a basis-independent way. Both the spin group and its Lie algebra are embedded inside the Clifford algebra in a natural way, and in applications the Clifford algebra is often the easiest to work with. Spinor - Wikipedia Abstract. The aim of this chapter is to gather some basic results concerning real and complex Clifford algebras. All material covered is classical, exception made of the approach given in §§4.7 - 4.8 to the explicit realization of spinor space and a Hermitian structure on it. Clifford Algebras and Spinor Spaces | SpringerLink The Clifford Algebra is $f_j^2 = -1, g_i^2 = 2ij$: (1) The point of studying Clifford algebra is that once you find representations of Clifford algebra you can immediately construct representations of Spin(N). Generators of rotations in Spin(N) are given by $M_{ij} = \frac{1}{2} \gamma_i \gamma_j$ [Notes on Clifford Algebra and Spin(N) Representations] In this construction the representation of the Clifford algebra $Cl(V, g)$, the Lie algebra $so(V, g)$, and the Spin group $Spin(V, g)$, all depend on the choice of the orthonormal basis and the choice of the gamma matrices. This can cause confusion over conventions, but invariants like traces are independent of choices.
