Rezherad looked at the princess and then stood up from her chair. She reached back with her hand and pulled out her sword which was hidden in a sheath slung over her back. Fahiram gave a silent nod and in the next moment, she stood ready with the same weapon. Stealthily, they approached the table where the peasant was still trying to pull the jug of wine from the drunk man's grasp. They gave one another a signal with a hand: a letter X which they wrote in the air, and then Fahiram led her sword from the man's left shoulder, across his neck to his front where the blade met Rezherad's sword, brought there from the other side. The man's eyes grew wide and he stared, frozen, at the two swords, which could cut off his head at any moment like scissors. Without moving his body, he set the jug of wine down on the table with care, adding a few coins from the pocket of his jacket.

The only comprehensive set of guidelines for secure Java programming - from the field's leading organizations, CERT and Oracle • • Authoritative, end-to-end code-level requirements for building secure systems with any recent version of Java, including the new Java 7 • Presents techniques that also improve safety, reliability, dependability, robustness, availability, maintainability, and other attributes of quality. • Includes extensive risk assessment guidance, plus references for further information. This is the first authoritative, comprehensive compilation of code-level requirements for building secure systems in Java. Organized by CERT's pioneering software security experts, with support from Oracle's own Java platform developers, it covers every facet of secure software coding with Java 7 SE and Java 6 SE, and offers value even to developers working with other Java versions. The authors itemize the most common coding errors leading to vulnerabilities in Java programs, and provide specific guidelines for avoiding each of them. They show how to produce programs that are not only secure, but also safer, more reliable, more robust, and easier to maintain. After a high-level introduction to Java application security, eighteen consistently-organized chapters detail specific guidelines for each facet of Java development. Each set of guidelines defines conformance, presents both noncompliant examples and corresponding

compliant solutions, shows how to assess risk, and offers references for further information. To limit this book's size, the authors focus on 'normative requirements': strict rules for what programmers must do for their work to be secure, as defined by conformance to specific standards that can be tested through automated analysis software. (Note: A follow-up book will present 'non-normative requirements': recommendations for what Java developers typically 'should' do to further strengthen program security beyond testable 'requirements'.)

Behind the steady stream of new products, technologies, systems and services in our modern societies there is prolonged and complicated battle around the role of users. How should designers get to know the users' interests and needs? Who should speak for the users? How may designers collaborate with users and in what ways may users take innovation into their own hands? The New Production of Users offers a rare overview of these issues. It traces the history of designer-user relations from the era of mass production to the present days. Its focus lies in elaborating the currently emerging strategies and approaches to user involvement in business and citizen contexts. It analyses the challenges in the practical collaborations between designers and users, and it investigates a number of cases, where groups of users collectively took charge of innovation. In addition to a number of new case studies, the book provides a thorough account of theories of user involvement as well as and offers further developments to these theories. As a part of this, the book relates to the wide spectrum of fields currently associated with user involvement, such as user-centered design, participatory design, user innovation, open source software, cocreation and peer production. Exploring the nexus between users and designers, between efforts to democratize innovation and to mobilize users for commercial purposes, this multi-disciplinary book will be of great interest to academics, policy makers and practitioners in fields such as Innovation Studies, Innovation Policy, Science and Technology Studies, Cultural Studies, Consumption studies, Marketing, e-commerce, Media Studies as well as Design research.
