### Commercial Directory Routledge

Originally compiled and written by North Korean defector and author Lim Il, this English-language edition, thoroughly annotated by Dr. Adam Zulawnik, is a fascinating collection of 34 interviews with highly prominent North Korean defectors residing in South Korea, ranging from religious figures, to artists, politicians, North Korea experts, and even divers and subway train operators. The 33 interviews herein are listed chronologically according to the interviewees' date of arrival to South Korea and span almost 70 years. The book also includes six special columns addressing key issues pertaining to North Korean defectors and their lives in South Korea, such as the relationship between North Korean defectors and their South Korean counterparts (South Korean defectors to North Korea; nomenclature (how North Korean defectors have been referred to in South Korean society over time); arrival and settlement provisions from the South Korean government; the nuanced difference between defectors, defector-residents, and the displaced; North Korean defector-residents and their position in South Korean politics; and a short biography of five notable North Korean defector-residents who were not interviewed. The English translation also contains an exclusive 34th interview with Lim Il, the source text author which was carried out towards the end of the project in October 2020. The book is a valuable testament to North Korean defector-residents and unique in that it provides a candid account of each individual's experience. It will prove to be especially useful to students and scholars seeking to understand the complex dynamics of North Korean society and the status of exiles in South Korea, and a vital resource for students of Korean Studies. *Mathematics N1* HSRC Press

This book contains eight papers from a detailed study of technical college provision in KwaZulu-Natal, South Africa, that raised the following four issues relevant to the transformation of technical colleges across South Africa: (1) the teaching and learning environment at technical colleges is suboptimal; (2) social relations at the technical colleges are tense, with few institutions having successfully come to terms with the rapid deracialization of student enrollments in recent years; (3) the labor market surrounding technical colleges appears totally dysfunctional, with few students obtaining employment after technical college training; and (4) the separate development policies of the past necessitate institutional restructuring. The following papers are included: "A Study of Technical Colleges in KwaZulu-Natal: A

Methodological Introduction" (Andre Kraak, Graham Hall);

"Problems Facing Further Education and Training" (Andre Kraak);

"Planning Imperative: New Policy Framework in FET [Further Education and Training]" (Andre Kraak); "Socio-Economic and Educational Profile of KwaZulu-Natal" (Nisaar Mahomed);

"Quantitative Overview of the Technical Colleges of KwaZulu-Natal" (Graham Hall); "Learning, Teaching and Management Environment: Evidence from Qualitative Studies" (Andre Kraak);

"Autonomy and Responsiveness: Evidence from the Qualitative Case Studies" (Andre Kraak); and "Critical Overview: The Need for Labour Market and Institutional Reform" (Andre Kraak). The bibliography contains 52 references. (MN)

*Change Management in TVET Colleges African Minds*

Technical and vocational education and training at technical schools are major contributing factors in combating poverty, unemployment, and inequality. The primary purpose of technical and vocational education and training is to prepare students and learners for the world of work and for a smooth transition from education institutions into the workplace. As the Fourth Industrial Revolution continues to create more radical changes in the labor market, experts are calling for a reform of education, including vocational education and training and adult and professional education. *New Models for Technical and Vocational Education and Training* is an essential scholarly research book that examines TVET and CET colleges and programs that provide intermediate skills to enhance students' chances of employability and entrepreneurship in Industry 4.0. The book explores knowledge in respect to workforce preparation, digital skills development, teaching and learning of TVET, flexibility and articulation of TVET to respond to work-integrated learning, and reskilling and upskilling to avoid skill mismatches. It is ideal for TVET schools, academicians, curriculum designers, managers, training officers, administrators, vocational professionals, researchers, and students.

South Africa has made huge gains in ensuring universal enrolment for children at school, and in restructuring and recapitalising the FET college sector. However, some three million young people are not in education, employment or training and the country faces serious challenges in providing its youth with the pathways and support they need to transition successfully into a differentiated system of post-school education and training. Across nine evidence-based chapters, 17 authors offer a succinct overview of the different facets of post-school provision in South Africa. These include an analysis of the impact of the national qualifications system on occupational training, the impact of youth unemployment, the capacity of the post-school system to

absorb larger numbers of young people, the relationship between universities and FET colleges, the need for more strategic public and private investment in skills development, and a youth perspective on education and training policy. The authors have a number of recommendations for improving the alignment between schooling, further education and training, and university education - interventions that could shape the future of our youth.

**Papers Presented at a Conference Held at the University of Port Elizabeth on 10 and 11 April 1992 and Jointly Organized by the University of Port Elizabeth and the National Education Coordinating Committee** CRC Press

This text analyses how technical colleges have responded to the emerging field of further education and training (FET) in South Africa. The data and theories presented are the result of research conducted by the Human Sciences Research Council, including surveys of technical college graduates and employers on their satisfaction with college graduates and institutional profiles of local labor markets. The international case studies of vocational and technical education demonstrate the interrelatedness of education and training systems.

This collection presents new investigations into the role of heritage languages and the correlation between culture and language from a pedagogic and cosmopolitical point of view.

**Transforming Further Education and Training in South Africa: Qualitative findings and analysis** Elsevier

This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies, featuring more than 950 journals published in the U.S. and abroad. The database also covers conference papers and proceedings, special reports from international agencies, non-governmental organizations, universities, associations and private corporations. Other materials selectively indexed include significant monographs, government studies and newsletters.

This volume represents the proceedings of the 2013 International Conference on Innovation, Communication and Engineering (ICICE 2013). This conference was organized by the China University of Petroleum (Huadong/East China) and the Taiwanese Institute of Knowledge Innovation, and was held in Qingdao, Shandong, P.R. China, October 26 - November 1, 2013. The conference received 653 submitted papers from 10 countries, of which 214 papers were selected by the committees to be presented at ICICE 2013. The conference provided a unified communication platform for researchers in a wide range of fields from information technology, communication science, and applied mathematics, to computer science, advanced material science, design and engineering. This volume enables interdisciplinary collaboration between science and engineering technologists in academia and industry as well as networking internationally. Consists of a book of abstracts (260 pp.) and a USB flash card with full papers (912 pp.).

*Serials Holdings in the Linda Hall Library New Models for Technical and Vocational Education and Training*

The Technical and Vocational Education and Training (TVET)

college environment is marked by increasingly stark juxtapositions between what needs to be achieved in the post-school education sector and the increasing difficulty of current conditions. The 'triple challenge' of poverty, inequality and unemployment weighs heavily on the social, political and

economic fabric of the country and expectations are high that the TVET colleges can make a pivotal contribution to counter these challenges. Despite laudable increases in TVET enrolment, the education system needs to work harder to accommodate the weight of demand for post school further education and training (FET) band qualifications from young people not in education, employment or training. At the same time, it is vital to secure adequate quality in TVET programmes which depend so much on the competence and commitment of college lecturers. This collection offers a set of research papers that provide new analytic and empirical material on:

- The political economy of TVET types in different countries which, by comparison, illuminate the South African case;
- A periodisation of government interventions in the TVET sector over the last three decades;
- The unsettled state and status of TVET lecturers in relation to their job requirements and conditions of service;
- The halting evolution of collegial relationships between college lecturers towards higher collegiality;
- Employer expectations of college graduates and how colleges are responding; and
- An analysis of the outcomes of a college improvement intervention in Limpopo and the Eastern Cape. This book will offer valuable information and insights for decision-makers as well as analysts of institutional change concerning links between education and economic growth, with particular regard to TVET graduates' employment rates.
