Complex Magazine and Guide Springer Science & Business Media

Many books and courses tackle natural language processing (NLP) problems with toy use cases and well-defined datasets. But if you want to build, iterate, and scale NLP systems in a business setting and tailor them for particular industry verticals, this is your guide. Software engineers and data scientists will learn how to navigate the maze of options available at each step of the journey. Through the course of the book, authors Sowmya Vajjala, Bodhisattwa Majumder, Anuj Gupta, and Harshit Surana will guide you through the process of building real-world NLP solutions embedded in larger product setups. You'll learn how to adapt your solutions for different industry verticals such as healthcare, social media, and retail. With this book, you'll: Understand the wide spectrum of problem statements, tasks, and solution approaches within NLP Implement and evaluate different NLP applications using machine learning and deep learning methods Fine-tune your NLP solution based on your business problem and industry vertical Evaluate various algorithms and approaches for NLP product tasks, datasets, and stages Produce software solutions following best practices around release, deployment, and DevOps for NLP systems Understand best practices, opportunities, and the roadmap for NLP from a business and product leader's perspective

Security Owner's Stock Guide Springer Science & Business Media
A comprehensive guide to mapping software explains how to interface one's GPS receiver with a computer to create maps, annotate aerial photos, and create 3-D maps. Also includes where to find free software and maps, how to use aerial photos and satellite imagery, and how to view favorite backcountry locations in 3-D.

GPS Mapping Academic Press

Though an increasing number of criminals are using computers and computer networks, few investigators are well versed in the

issues related to digital evidence. This work explains how computer networks function and how they can be used in a crime.

Ebony Lippincott Williams & Wilkins

Beginning with the impassioned, never-before-published title poem, here is the life's work of a beloved Kashmiri-American poet. Agha Shahid Ali died in 2001, mourned by myriad lovers of poetry and devoted students. This volume, his shining legacy, moves from playful early poems to themes of mourning and loss, culminating in the ghazals of *Call Me Ishmael Tonight*. The title poem appears in print for the first time. from "The Veiled Suite" I wait for him to look straight into my eyes This is our only chance for magnificence. If he, carefully, upon this hour of ice, will let us almost completely crystallize, tell me, who but I could chill his dreaming night. Where he turns, what will not appear but my eyes? Wherever he looks, the sky is only eyes. Whatever news he has, it is of the sea.

Sahara Overland Springer Science & Business Media

Voice assistants, automated customer service agents, and other cutting-edge human-to-computer interactions rely on accurately interpreting language as it is written and spoken. Real-world Natural Language Processing teaches you how to create practical NLP applications without getting bogged down in complex language theory and the mathematics of deep learning. In this engaging book, you'll explore the core tools and techniques required to build a huge range of powerful NLP apps. about the technology Natural language processing is the part of AI dedicated to understanding and generating human text and speech. NLP covers a wide range of algorithms and tasks, from classic functions such as spell checkers, machine translation, and search engines to emerging innovations like chatbots, voice assistants, and automatic text summarization. Wherever there is text, NLP can be useful for extracting meaning and bridging the gap between humans and machines. about the book Real-world Natural Language Processing teaches you how to create practical NLP applications using Python and open source NLP libraries such as AllenNLP and Fairseq. In this practical guide, you'll begin by creating a complete sentiment analyzer, then dive deep into each component to unlock the building blocks you'll use in all different

kinds of NLP programs. By the time you're done, you'll have the skills to create named entity taggers, machine translation systems, spelling correctors, and language generation systems. what's inside Design, develop, and deploy basic NLP applications NLP libraries such as AllenNLP and Fairseq Advanced NLP concepts such as attention and transfer learning about the reader Aimed at intermediate Python programmers. No mathematical or machine learning knowledge required. about the author Masato Hagiwara received his computer science PhD from Nagoya University in 2009, focusing on Natural Language Processing and machine learning. He has interned at Google and Microsoft Research, and worked at Baidu Japan, Duolingo, and Rakuten Institute of Technology. He now runs his own consultancy business advising clients, including startups and research institutions.

San Diego Magazine Penguin Books India

A complete training and conditioning program is now available for coaches, parents, and strength and conditioning experts who work with young athletes, ages 6 to 16. 300 illustrations.

Perspectives on Linguistic Pragmatics Springer

Fun for Flyers Student's Book provides full-colour preparation material for the Cambridge Young Learners English Test: Flyers. Fun activities balanced with exam-style questions practise all the areas of the syllabus in a communicative way. The material is specifically designed to focus on those areas most likely to cause problems for young learners at this level. The Audio CDs, available separately, include listening material to accompany the Student's Book. The website to accompany the Fun for Starters, Movers, Flyers series includes interactive versions of some activities from the Student's Books.

Etruscan Inscriptions Cambridge University Press

This is a history of "guerilla television", a form of TV which was part of an alternative media tide sweeping the United States in the 1960s. Inspired by the fracturing issues of the decade and the theories and writings of various exponents, guerilla television put forth "utopian" programming.

Sengoidelc Simon and Schuster

2018 version of the OSINT Tools and Resources Handbook. This

version is almost three times the size of the last public release in 2016. It reflects the changing intelligence needs of our clients in both the public and private sector, as well as the many areas we have been active in over the past two years.

Pi: A Source Book Oxford University Press, USA

This book presents and analyzes the concept of online brand communities, an emerging and exciting topic in marketing and eCommerce. First, it lays out the foundations like the evolution of the Web and the so-called Social Web, its utility for users and businesses, and the evolution of the marketing mind-set to adapt the Social Web. On this basis, the book then presents a detailed analysis of online brand communities, examining the concept of virtual community with a specific focus on virtual brand communities. In this context the book also explores recent trends related to branding and brand management. Next, it proposes a classification system for online brand communities, taking into account questions like the motivating factors for consumers to join, participate and stay in a community. The process of value creation in communities is examined from both business and consumer perspectives. The book draws to a close with a brief presentation of the process broadly accepted for the successful development of online brand communities.

Practical Natural Language Processing CreateSpace

The definitive book on The Station nightclub fire on the 10th anniversary of the disaster

The Student's Pali-English Dictionary Syracuse University Press

This volume provides insight into linguistic pragmatics from the perspective of linguists who have been influenced by philosophy. Theory of Mind and perspectives on point of view are presented along with other topics including: semantics vs. semiotics, clinical pragmatics, explicatures, cancellability of explicatures, interactive language use, reference, common ground, presupposition, definiteness, logophoricity and point of view in connection with pragmatic inference, pragmemes and language games, pragmatics and artificial languages, the mechanism of the form/content correlation from a pragmatic point of view, amongst other issues relating to language use. Relevance Theory is introduced as an important framework, allowing readers to familiarize themselves with technical details and linguistic terminology. This book follows on from the first volume: both

contain the work of world renowned experts who discuss theories relevant to pragmatics. Here, the relationship between semantics and pragmatics is explored: conversational explicatures are a way to bridge the gap in semantics between underdetermined logical forms and full propositional content. These volumes are written in an accessible way and work well both as a stimulus to further research and as a guide to less experienced researchers and students who would like to know more about this vast, complex, and difficult field of inquiry.

Digital Evidence and Computer Crime Springer Science & Business Media

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

Total Training for Young Champions O'Reilly Media

Now in its Sixth Edition, Surgical Recall allows for rapid-fire review of surgical clerkship material for third- or fourth-year medical students preparing for the USMLE and shelf exams. Written in a concise question-and-answer format—double-column, question on the left, answer on the right—Surgical Recall addresses both general surgery and surgical subspecialties. Students on rotation or being PIMPed can quickly refer to Surgical Recall for accurate and on-the-spot answers. The book includes survival tactics and tips for success on the boards and wards as well as key information for those new to the surgical suite.

Subject to Change Springer

Systematically develop the concepts and tools that are vital to every mathematician, whether pure or applied, aspiring or established A comprehensive treatment with a global view of the subject, emphasizing the connections between real analysis and other branches of mathematics Included throughout are many

examples and hundreds of problems, and a separate 55-page section gives hints or complete solutions for most.

The Life and Letters of St. Francis Xavier UPNE

Covers over 10,000km from the High Atlas to the Mauritanian border, with detailed GPS off-road routes for 4WDs, motorcycles, campervans and mountain bikes.--Bertram.

Marine Artillery Survey Operations Human Kinetics

How can an evangelist convert a hardboiled sophisticate? Why does a prisoner of war sign a "confession" that he knows is false? How is a criminal pressured into admitting his guilt? Do the evangelist, the POW's captor, and the policeman use similar methods to gain their ends? These and other compelling questions are discussed in this definitive work by William Sargant, who for many years until his death in 1988 was a leading physician in psychological medicine. Sargant spells out and illustrates the basic technique used by evangelists, psychiatrists, and brainwashers to disperse the patterns of belief and behavior already established in the minds of their hearers, and to substitute new patterns for them.

Morocco Overland

Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve

wider potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.

Open Source Intelligence Tools and Resources Handbook

This textbook provides an introduction to digital forensics, a rapidly evolving field for solving crimes. Beginning with the basic concepts of computer forensics, each of the book's 21 chapters focuses on a particular forensic topic composed of two parts: background knowledge and hands-on experience through practice exercises. Each theoretical or background section concludes with a series of review questions, which are prepared to test students'

understanding of the materials, while the practice exercises are intended to afford students the opportunity to apply the concepts introduced in the section on background knowledge. This experience-oriented textbook is meant to assist students in gaining a better understanding of digital forensics through hands-on practice in collecting and preserving digital evidence by completing various exercises. With 20 student-directed, inquiry-based practice exercises, students will better understand digital forensic concepts and learn digital forensic investigation techniques. This textbook is intended for upper undergraduate and graduate-level students who are taking digital-forensic

related courses or working in digital forensics research. It can also be used by digital forensics practitioners, IT security analysts, and security engineers working in the IT security industry, particular IT professionals responsible for digital investigation and incident handling or researchers working in these related fields as a reference book.
