### **Nature Aquarium** CompanionHouse Books

The essential guide to creating your own underwater world. Sunken Gardens is packed with everything you need to plan, design, and maintain a planted freshwater aquarium. Karen Randall shares her years of expertise and makes this enchanting hobby accessible to everyone. You'll learn everything from the biology of aquatic plants and basic aquarium chemistry to tank maintenance and troubleshooting. Plant profiles highlight the best options for a range of tank situations, and a chapter devoted to aquascaping styles provides basic design principles and inspiring examples. With hundreds of color photographs and clear, reliable advice, Sunken Gardens is an essential introduction to a fascinating pastime.

### **Wildland Fire in Ecosystems** Franklin Classics

Book presents scientific information that hobbyists can use to set up and maintain successful planted freshwater aquaria. Book contains practical tips using a question-and-answer format in boxes scattered throughout the text. Hobbyists learn how to keep a healthy and inexpensive aquarium. Although the author prefers "low-tech" methods, she lays out the science that underlies all methods. The author shows that hobbyists can create thriving planted freshwater tanks WITHOUT CO2 injection, fertilizers, expensive lighting, and other high-tech gadgets. Vigorous plant growth can purify the water, protect fish, and reduce tank maintenance. Techniques are backed up by primary scientific references from the aquatic botany, limnology, and chemistry literature.

Cichlid fishes are amazing creatures. In terms of sheer number of species, they are the most successful of all families of vertebrate animals, and the extent and speed with which they have evolved in some African lakes has made them the darlings of evolutionary biologists. But what truly captivates biologists like George Barlow -- not to mention thousands of aquarists the world over -- is the complexity of their social lives and their devotion to family (most species of cichlids are monogamous and many pairs share the responsibility of raising offspring). In this wonderful book, Barlow describes the unusually high intelligence of these fishes, their complex mating and parenting rituals, their bizarre feeding and fighting habits, and the unusual adaptations and explosive rate of speciation that have enabled them to proliferate and flourish. A celebration of their diversity, *The Cichlid Fishes* is also a marvelous exploration of how these unique animals might help resolve the age-old puzzle of how species arise and evolve.

### Creating a Natural Aquarium Tfh Publications, Incorporated

Explores the coexistence of plants and fish in what aquarists call the "natural aquarium."

### **Planted Forests: Contributions to the Quest for Sustainable Societies** TFH Publications

This text describes the temperature, water, fertilizer and light needs of more than 300 aquarium plants. Artificial lighting - lamp types, colour temperatures and mounting - is discussed in detail and

the author provides advice on choosing the right plants for an aquarium. Ecological factors, flower biology and morphology and reproduction methods receive detailed coverage. The book contains colour photographs with nearly all plants depicted with fully developed submerged foliage. Botanists as well as professional and amateur keepers should find this book useful.

### *Aquarium Plant Paradise* Bookworm Publishing Company, Incorporated

In this volume, international experts describe biological, ecological, economic and social aspects of planted forests. Representative types of planted forests are described and discussed, technical and social aspects are considered, and case studies depict the variety of purposes and uses of planted forests. Authors discuss the nature of planted forests of representative species world-wide, basic biology and ecology of plantations, and economic and social considerations in landscapes where planted forests contribute to potentially sustainable societies. The authors represent temperate and tropical forests, developed and developing nations, and all levels of intensity of planting and managing forest trees. This compilation of views and viewpoints about planted forests provides a fresh, broad outlook on trees planted for myriad purposes. Forest scientists and managers, policy experts, development officials and interested citizens will find information of value and stimuli for thinking about forests of the future.

### A Fishkeeper's Guide to Aquarium Plants Elsevier

### Aquascaping Basic Books

In this new work from world-renowned aquarist Takashi Amano, over 200 vibrant, full-color photos display the captivating beauty of nature aquarium designs while providing detailed, step-by-step instructions on how to create your own aquatic masterpiece.

### Small Reef Aquarium Basics Krieger Publishing Company

This non-fiction, family history narrative should appeal to a general audience. Story begins with the emigration of my eight great-grandparents from northern Europe and ends with my parents during World War II. It intertwines highlights from each character's life story against a historical backdrop--immigration in general, homesteading in Nebraska, oil drilling in 1915 Burma, the 1946 shipping of "war brides" to America, etc. In describing the lives of my ancestors, I bring up sociological and public health topics--maternal mortality, pre-marital sex, tuberculosis, alcoholism, sibling rivalry, dating in the 1920s, problems of stepmothers, etc. I have used family members to illustrate the human condition and produce a riveting story. I believe it will inspire, educate, and entertain.

It is almost thirty years since Professor G. G. Winberg established the basis for experimental studies in fish energetics with the publication of his monograph, *Rate of Metabolism and Food Requirements of Fishes*. His ultimate aim was to develop a scientific approach to fish culture and management, and the immense volume of literature generated in the ensuing years has been mainly in response to the demand for information from a rapidly expanding, world-wide aquaculture industry and to the shortcomings of contemporary practices in fisheries management. The purpose of this book is not to review this literature comprehensively, but, assuming an informed readership, to focus attention on

topics in which new knowledge and theory are beginning to be applied in practice. Most emphasis has been placed on food; feeding; production (growth and reproduction) and energy budgeting, as these have most influence on the development of fish culture. Some chapters offer practical advice for the selection of methods, and warn of pitfalls in previous approaches. In others the influence of new theory on the interpretation of studies in fish energetics is discussed in the context of resource allocation and adaptation. We hope that the scope of material presented here will have sufficient interest and value to help significantly to fulfil Winberg's original objectives.
