What would a synthetic theory of Digital, Media and Information Literacy (DMIL) look like? Radical Information Literacy presents, for the first time, a theory of DMIL that synthesises the diversity of perspectives and positions on DMIL, both in the classroom and the workplace, and within the informal learning processes of society. This title is based on original analysis of how decisions are made about the relevance of information and the other resources used in learning, showing how society has privileged objective approaches (used in rule-based decision making) to the detriment of subjective and

intersubjective perspectives which promote individual and community contexts. The book goes on to analyse the academic and popular DMIL literature, showing how the field may have been, consciously or unwittingly, complicit in the 'objectification' of learning and the disempowerment of individuals and communities. Alternative ways of conceiving the subject are then presented, towards a reversal of these trends. Synthesises key theorists of digital, media and information literacy and information behaviour Includes the field of 'community informatics' Conducts a bibliometric analysis of a broad spectrum of writings on digital, media and information literacy, analysing the connections between them and the frames of DMIL within which they are located

Capitalism in its modern form has become universal and has a presence in practically every country in the world, including those which once called themselves Communist. This book studies its effects on different labor markets, from those linked to highly tertiary economies (EU-27, USA and Japan, to the most productive economies, such as China, and on to economic models that are in full transition from secondary to tertiary economies, as is the case in several Latin American countries.

This book traces the emergence and development of the relationship between management consultancies and the British state. It seeks to answer three questions: why were management consultants brought into the machinery of the state; how has state power been impacted by bringing profit-seeking actors into the machinery of the state; and how has the nature of management consultancy changed over time? The book demonstrates the role consultants played in major developments in the postwar period. Specific case studies interrogate how consultancies influenced the policy

fields of health service reform and social security benefits. This book will redefine debates amongst business historians and historians of the postwar British state about the nature of management consultancy and public sector reform. *A Historical Analysis Since 1960* Elsevier Health Sciences

Building on the success of the 2003 Handbook of the Life Course, this second volume identifies future directions for life course research and policy. The introductory essay and the chapters that make up the five sections of this book, show consensus on strategic "next steps" in life course studies. These next steps are explored in detail in each section: Section I, on life course theory, provides fresh perspectives on well-established topics, including cohorts, life stages, and legal and regulatory contexts. It challenges life course scholars to move beyond common individualistic paradigms. Section II highlights changes in major institutional and organizational contexts of the life course. It draws on conceptual advances and recent empirical findings to identify promising avenues for research that illuminate the interplay between structure and agency. It examines trends in family, school, and workplace, as well as contexts that deserve heightened attention, including the military, the criminal justice system, and natural and man-made disaster. The remaining three sections consider advances and suggest strategic opportunities in the study of health and development throughout the life course. They explore methodological innovations, including qualitative and three-generational longitudinal research

designs, causal analysis, growth curves, and the study of place. Finally, they show ways to build bridges between life course research and public policy.

One-size-fits-all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development (emergence, growth, sustainment or decline) their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into account the emergence and adaptation of clusters and industries.

Over the past two decades, scholars and practitioners have taken a keen interest in the field of Sport for Development and Peace (SDP). These efforts have largely focused on and debated the merits of sport as a tool for development, diplomacy, and peacebuilding in under-resourced, underdeveloped, and conflict regions. Making sense of the positive contributions that sport can offer to such complex and multi-faceted issues requires understanding the various connections and meanings that individuals and communities ascribe to their sporting experiences. This book offers a unique outlet for research that engages with, rather than makes claims about, individuals and communities around the world. Diverse, contemporary, and thought-provoking examples of qualitative methods in the study of SDP are detailed, along with rich, meaningful, and provocative insights from these studies. Readers are invited to think critically about the fields of enquiry, philosophical underpinnings, and methodologies utilised, as well as the audiences engaged and topics explored. We hope readers will join us in considering how these chapters can push the SDP field into more rigorous, methodologically innovative, and diverse approaches to research and evaluation, while also engaging with actors who are still often spoken for or about, rather than with. This book was originally published as a special issue of *Qualitative Research in Sport, Exercise and Health*.

The importance of critical thinking has surged as academics in higher education realize that many students, upon entering college, lack the critical thinking skills necessary to succeed. While much has been written regarding the 'lack' of critical thinking, less has been written on the success of methods implemented to develop this fundamental skill. *The Handbook of Research on Advancing Critical Thinking in Higher Education* explores the effective methods and tools being used to integrate the development of critical thinking skills in both undergraduate and graduate studies. Due to the difficulties associated with teaching critical thinking skills to learners of any age, this publication is a crucial addition to the scholarly reference works available to pre-service and early career teachers, seasoned educational professionals, professors across disciplines, curriculum specialists, and educational administrators.

Aging is a challenge which countries in East Asia and Pacific (EAP) regions are grappling with or will soon confront. It raises many questions for policymakers

ranging from potential macroeconomic impacts, to fiscal challenges of supporting pension, health and long-term care systems, and labor market implications as countries seek to promote productive aging. The urgency of the aging challenge varies across the region, but it will confront all EAP countries in time and early preparation is essential to avoid the missteps of other regions. Live Long and Prosper discusses the societal and public policy challenges and reform options for EAP countries as they address aging. It aims to strike a balance between aging optimists and pessimists. On the one hand, the impacts of aging on growth, labor markets and public spending are not the unavoidable catastrophe often feared. However, minimizing the downside risks of aging and ensuring healthy and productive aging will require proactive public policy, political leadership, and new mindsets across society. The report reviews the evidence on demographic transition in EAP and its potential macroeconomic impact. It addresses the current policy environment including pensions and social security, health, and long-term care and labor markets to assess the risks of 'business as usual'. It also suggests policy directions to promote healthy and productive aging in EAP, and emphasizes that aging is not just about older people, but requires policy and behavioral change across the life cycle.
