DENNIS RANDOLPH

Easy-to-Do Card Tricks for Children Courier Corporation

Learn to be a Maths Wizard with Creative Magic. Easy to learn and perform. Create your own unique magic tricks. Children and adults will improve their mathematical skills in a friendly and fun way. This book shows you how to perform magic and how to create your own versions of classic magic tricks. The creativity comes from the chapters ideas on how to develop the tricks to make them your own. Don't do the same tricks as the next budding magician, learn how to make them your own. Self working magic works without the need of slight of hand or any other hidden tricks. Once the trick is set up the magic

will always work due to the hidden number secrets. This collection of magic tricks has been compiled by Martin Duffy (past president of the Newcastle Magic Circle) and Steve Humble (Maths publicist aka Dr Maths), both experts in self working magic.

The magic shop Courier Corporation From simple to advanced, and using household and inexpensive props, Knack Magic Tricks includes tricks using cards, coins, handkerchiefs, and fruit, as well as mental tricks, anytime tricks, standup tricks, and tricks especially for kids (to be performed both for them and by them).

Ellis Stanyon's Best Card Tricks Lulu.com

Marvelous treasury of card magic presents exact details of 155 professional card tricks that anyone can learn. Card wizard John Scarne reworked these tricks to

eliminate the need for sleight-of-hand. Simple instructions and clear diagrams illustrate Houdini's "Card on the Ceiling," Blackstone's "Card Trick Without Cards," Milton Berle's "Quickie Card Deal," more. **Encyclopedia of Card Tricks** Courier Corporation

Magicians have dazzled audiences for many centuries; however, few researchers have studied how, let alone why, most tricks work. The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena, including sensory illusions, misdirection of attention, and the appearance of mind-control and nuanced persuasion. Most studies to date have focused on either the psychological principles involved in watching and performing magic or "neuromagic" - the neural correlates of

such phenomena. Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts, the history of magic reveals that scientific discovery often charts new territories for magicians. In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic. On the one hand, magic can inform psychology, with particular benefits for the cognitive, social, developmental, and transcultural components of behavioural science. Magicians have a large and robust set of effects that most researchers rarely exploit. Incorporating these effects into existing experimental, even clinical, paradigms paves the road to innovative trajectories in the study of human behaviour. For example, magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision-making, and even processes spanning authorship and agency. Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities – perceptual, logical, emotional, and temporal – becomes all the more revealing when top-down influences, including expectation, symbolic thinking, and framing, join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion science leads to the creation of novel effects, or the refinement of existing ones, based on systematic methods. For example, by simulating a specific card routine using a series of computer stimuli, researchers have decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical

findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.

Magical Mathematics Strelbytskyy
Multimedia Publishing
Packed with over 40 magical science tricks for kids using simple experiments! Join comedian and author Steve Mould, #1 bestselling author of *How to be a Scientist*, and learn the secrets behind some of the most famous magic tricks and illusions (and learn some of your own). Learn how to bend water with a balloon, turn water into juice, make a glass beaker disappear in oil, and wow your friends with levitating tinsel! Packed with optical illusions, pranks, and fun facts, this ebook is a must-have for any aspiring scientist or magician (the two aren't as different as you might think)! Each trick is explained using step-by-step photographs, and the science behind each one is showcased clearly and simply. Sprinkled throughout the ebook are profiles of famous magicians and illusionists, such as Harry Houdini and David Blaine, and stories of how they used science to create their most famous tricks. *Science is Magic* is the perfect addition to any family bookshelf or classroom, putting a fresh spin on science for kids. What's fantastic about this kids' activity ebook is that many of the magic tricks or experiments are something you learn to perform on a friend and require practice. Thus, (the genius bit) it's not something kids will just do once and then turn the page. Think *Magic Is Just An Illusion?* Think again! Discover science - REAL magic at your fingertips. Learn some amazing experiments to wow your friends, find out how magicians use science in their most famous tricks, and discover the magic of the world around you. Packed with activities for kids from magic tricks to optical illusions, and peppered with fascinating facts, this educational ebook is a must-have for scientists and magicians alike. Added bonus, each 'trick' or experiment in the ebook uses simple items that can be grabbed from home or a hardware store. Get ready to wow your friends with some cool science-backed magic like: - Magnetic fingers - Reading minds - Color changing potion - Guess the coin - Floating ping pong ball and much

more! Add other fun-filled Steve Mould titles in the DK collection to your bookshelves, like *How To Be A Scientist* and *The Bacteria Book*.
