### **Access to Surgery**

Scientific Publishers - Competition Tutor VIVAs In Surgical Anatomy is the definitive way for surgeons to revise and test their surgical anatomy in preparation for postgraduate surgical examinations. Written by anatomy demonstrators and surgeons who have successfully completed the membership of the Royal College of Surgeons the book features high resolution cadaveric anatomy spot tests

accompanied by comprehensive explanations. Vivas In Surgical Anatomy collects over 50 high definition images of commonly tested anatomical areas, divided by body system. Over 500 viva questions accompany the images and questions are based on those asked by examiners at surgical examination anatomy stations. Features Cadaveric Anatomy Spots: Prosections presented in high definition Over 200 Part B Questions: Viva questions as asked at the

MRCs exam All Body Systems Covered: Head & Neck, Abdomen, Thorax, Upper Limb and Lower Limb and Spine viva stations Comprehensive Explanations: Top tips, mnemonics and full explanations accompany every answer *SBAQs for the FRCEM Primary* W.B. Saunders Company Multiple Choice Questions in Anatomy and Neurobiology for Undergraduates is a collection of multiple choice questions in anatomy and

neurobiology for undergraduate students. Questions are grouped for each visceral system and the nervous system. In the case of the body framework (including peripheral nerves and blood vessels), however, a regional grouping is used. Each question has the corresponding correct answer. This book is comprised of eight chapters covering the upper limb, head and neck, musculoskeletal trunk, lower limb, cardiovascular and respiratory systems,

gastrointestinal and genito-urinary systems, and neurobiology. Each chapter contains three types of questions designed to test knowledge in different ways. Type A items involve choosing a single correct answer from five available choices. Type L items are used to elicit information on the cause-effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the responses may be

grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient ( $r_{\text{biserial}}$ ), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own

question banks.

*Anatomy Questions for the MRCS* CRC Press

Anatomy: 1800 Multiple Choice Questions contains 1,800 multiple choice questions related to anatomy. The questions are supported by illustrations and arranged into nine sections: Upper Limb, Lower Limb, Thorax,

Abdomen, Pelvis and Perineum, Head and Neck, Nervous System, Histology, and Embryology. In the Histology section, the questions in each of the six standard formats are arranged in the same sequence, as follows: the Cell; the Tissues (commencing with the Epithelia and ending with Nervous Tissue); and the Systems (commencing with the Cardiovascular and ending with the Reproductive). Readers will encounter questions dealing with the spine of

the scapula, the vein that pierces the clavipectoral fascia, branch of the axillary artery, and the quadriceps femoris muscle. Other topics include muscle pair inserted into iliotibial tract, bony prominences on which you kneel, muscle that flexes hip and knee, and the chromosomal formula of the oocyte at ovulation. This text also discusses the rate of regeneration of peripheral nerves following injury; structures that occupy the carotid sheath; and the

location of sphincter urethrae. This book will be extremely valuable to students and teachers of anatomy.

What is good bedside manner? How do you tell patients they have a terminal illness? What do you do after you have told them? How do you deal with the family after a patient dies? How do you foster good relationships with patients, nurses and other physicians? How do you avoid burnout? Your answers to these and similar questions will prove crucial to your medical career. Yet during my seven years of medical school and residency, these issues were never mentioned,

much less dealt with. Some programs are now making efforts to teach the human side of medicine, but medical training today is not much different from mine. I

intended Medicine with a Human Touch to be a guide for medical students and residents in dealing with these and similar non-technical

problems. Yet numerous practicing physicians who reviewed it remarked that we would all do well to reexamine periodically how we are behaving in our everyday practice.
