Drum Sound and Drum Tuning assists drummers, sound engineers, and music students in learning critical skills related to drum sound and achieving an optimised and personalised drum

kit set-up. The book covers the essential theories of percussion acoustics and develops this knowledge in order to facilitate creative approaches to drum tuning and professional-level recording and mixing of drums. All aspects of drumhead vibration, drumhead equalisation, and resonant drumhead coupling are de-mystified, alongside discussions relating to drumhead types, drum shell vibration, and tuning to musical intervals for different performance genres. The book develops drum sound theory and creative analysis into a detailed dissection of recording and production techniques specifically for drums, including discussions on studio technologies, room acoustics, microphone techniques, phase coherence, and mixing drums with advanced digital audio workstation (DAW) techniques and creative processing tools. *Drum Sound and Drum Tuning* includes many practical hands-on exercises that incorporate example tutorials with Logic Pro and iDrumTune Pro software, encouraging the reader to put theory into immediate creative practice and to develop their own listening skills in an informed and reflective manner. The book also documents primary interviews and opinion from some of the world's most celebrated drummers, music producers, and sound engineers, enabling the reader to connect the relevant theories with real-world context, whilst refining their own personalised approach to mastering drum sound.

Understanding fuel injection and engine management systems is the key to extracting higher performance from today's

automobiles in a safe, reliable, and driveable fashion.

Turbochargers, superchargers, nitrous oxide, high compression ratios, radical camshafts: all are known to make horsepower, but without proper understanding and control of fuel injection and other electronic engine management systems, these popular power-adders will never live up to their potential and, at worst, can cause expensive engine damage. Drawing on a wealth of knowledge and experience and a background of more than 1,000 magazine articles on the subject, engine-control expert Jeff Hartman explains everything from the basics of fuel injection to the building of complex project cars. Hartman covers the latest developments in fuel-injection and engine management technology applied by both foreign and domestic manufacturers, including popular aftermarket systems. No other book in the market covers the subject of engine management systems from as many angles and as comprehensively as this book. Through his continuous magazine writing, author Jeff Hartman is always up-to-date with the newest fuel-injection and engine management products and systems.

CelloMind is a two-part pedagogical method book that focuses on intonation and left-hand cello technique. The coauthors of the book are Hans Jørgen Jensen, Professor of cello at the Bienen School of Music at Northwestern University and Minna Rose Chung, Associate Professor of Cello at the Desautels Faculty of Music at the University of Manitoba. Part I: Intonation. The mystery of intonation is revealed by defining and explaining the scientific principles that govern it. To know and understand how to combine the three primary intonation systems has never

before been expounded in a methodology publication--and for good reason. Playing with exquisite intonation has mostly been reserved for those who possess a strong intuitive sense; however, CelloMind breaks down this taboo using a systematic approach with a highly attuned manner. The three systems of intonation that string players most commonly use today--equal temperament, just intonation, and Pythagorean tuning--are each explored and explained in great detail. All chapters in the book include many practical samples and listening exercises that bridge the gap between the theory and its application. The chapters on intonation conclude with practical examples from the following repertoire: "Intonation Performance Practice in the Bach Solo Cello Suites" and "Intonation Performance Practice with Piano." Part II: Left-Hand Technique. The left-hand technique chapters in this section complement the study of intonation by providing a solid foundation of skills for essential cello playing. The topics and exercises have been selected to cover a wide range of technical skills that include playing with a light left-hand touch, speed, coordination, balanced vibrato, agility, finger independence, and efficient shifting. Original exercises developed for students over many years have also been incorporated into these chapters, as well as studies from Julius Klengel, Bernhard Cossmann, Louis R. Feuillard, Jean-Louis Duport, Yakov Rosenthal, and Fritz Albert Christian Rudinger.

Over the last decade, there has been an increasing amount of scholarship focused on race and food inequity. Much of this research is focused on the United States and its densely populated urban centers. Looking deeply into Black women's roles—economically, environmentally, and socially—in food and agriculture systems in the Caribbean, Africa, and the United States, the contributors address the ways Black women, both now and in the past, have used food as a part of community building and sustenance. They also examine matrilineal food-based education; the importance of Black women's social, cultural, and familial networks in addressing nutrition and food insecurity; the ways gender intersects with class and race globally when thinking about food; and how women-led science and technology

initiatives can be used to create healthier and more just food systems. Contributors include Agnes Atia Apusigah, Neela Badrie, Kenia-Rosa Campo, Dara Cooper, Kelsey Emar, Claudia J. Ford, Hanna Garth, Shelene Gomes, Veronica Gordon, Wendy-Ann Isaac, Lydia Kwoyiga, Gloria Sanders McCutcheon, Eveline M. F. W. Sawadogo/Compaore, Ashante M. Reese, Sakiko Shiratori, shakara tyler, and Marquitta Webb.
