 Project management is an essential life and workplace skill that everyone must develop. Following the popular style and format of other textbooks by Stewart Clegg, this brand new co-authored textbook on project management provides a much needed European perspective to the subject. Drawing on the latest research and practice, the authors guide students on an active learning journey through the project lifespan, promoting a critical and reflexive approach to studying project management, as well as one that creates value for all project stakeholders and emphasizes people and not just process. Case studies and examples discussed in the text cover a wide range of projects from large to smaller across different industries and sectors, both public and private, including: megaprojects (HS2); mega events (Olympics); political projects (Brexit); health-related project implementation (LEAN); tech-related projects (Google); building and restoration projects (housing/Sagrada Familia); and arts and cultural projects (European Capital of Culture). Incorporating a host of learning features both in chapters and via the supporting online resources, this textbook is essential reading for all students/managers completing a course unit in project management at either undergraduate or postgraduate level.

Project management (PM), traditionally employed to implement projects, has developed into Organizational Project Management, as organizations are increasingly using projects to deliver strategies. The emergence of program and portfolio management has also contributed to this move. PM researchers need to become more innovative in their research approaches. They need to connect with the broader currents of social science in relevant fields, such as organization theory. Outside the specific field, there is a great deal that can usefully be imported, transformed, and translated

so that it is fit for project management research purposes. More trans-disciplinary, translational, and transformational approaches for conducting project-related research are required, and this book goes a long way to providing foundations for them. The book encompasses reflections on fundamental questions underlying any research, such as the type of knowledge sought, as well as the epistemological and ontological assumptions. It broadens research methods and theory perspectives, drawing on contemporary approaches, such as action research, soft systems methodology, activity theory, actor-network theory, and other approaches adopted in related scientific and technological areas that are only recently being adopted. To achieve this, the book's editors have necessarily been eclectically interdisciplinary in their contributor list. They have included contemporary research methods and designs from areas allied to project research - such as organization science, organizational studies, sociology, behavioral science, and biology - providing innovative invitations to research design and methodological choice. Overall, this book makes a significant contribution to the maturation and development of project management research as a specialty in the broader social sciences, one that is a less-reliant handmaiden or under-laborer to purely technical issues, but which appreciates that any material construction is always a social construction as well, one that implies episteme and phronesis, knowledge and wisdom, as well as *techné* or technique. Project managers may not realize it, but the most important aspects of what they manage are the meanings, interpretations, and politics of projects, and not merely the technical aspects.

The Oxford Handbook of Project Management presents and discusses leading ideas in the management of projects. It suggests we could be entering an emerging 'third wave' of analysis and interpretation following its early technical and operational beginnings and the subsequent shift to a focus on projects and their management. Topics dealt with include: the historical evolution of the subject; its theoretical base; professionalism; business and societal context; strategy; organization; governance; innovation; overruns; risk; information management; procurement; relationships and trust; knowledge management; practice and teams. This handbook is of particular relevance to those interested in the research issues underlying project management.

Learning has become a constant state of mind for most professionals in today's organizations. However, to become a true learning enterprise, organizations cannot stop at instilling this yearning for knowledge into their collaborators. They must also capture and formalize the common know-how of the organization, as well as provide time and infrastructure to allow learning moments to happen. The aim of the Gaming Workgroup within IFIP 5.7 on Integrated Production Management Systems and the European Group of University Teachers for Industrial Management EHTB is to develop tools and formalisms to support experimental learning in these organizations. It has been proven that modelling the know-how, using visual environments such as multimedia and graphic simulations, is a first step. This in turn allows for the development of games, i.e. challenging settings that foster group interaction and problem solving. Games in Operations Management provides an excellent overview of the different game formats that have been developed and tested in past years, and includes games in a manufacturing environment, games in a services environment, and games for teaching organizational values. The book comprises the selected, revised proceedings of the 4th International Workshop on Games in Production Management: Experimental Learning in Industrial Management, which was sponsored by the International Federation for Information Processing (IFIP) and held in November, 1998, in Ghent, Belgium. The book will be of particular interest to organizational trainers, providing a good overview of state-of-the-art game and training formats as well as hints and advice on how to organize interactive training sessions. It will also be of interest to researchers in industrial engineering, industrial management, and operations management.
