JOSIE KIRK

Ecology, Development and Conservation Transportation Research Board

This book reflects academically on important and relevant natural scientific disciplines, important technologies and related media to determine and communicate the moral issues and challenges within those specific fields of study, and how to deal with them morally and from a multidimensional South African context. It aims to add scientific, technological and ethical value, locally and globally, by reflecting mainly from the viewpoint of a specific scholars, writing about the most pressing moral issues or challenges raised by problems within their specific field of study. It is written mainly from a qualitative methodological perspective, including autobiographical and participatory views. The co-authors present in respective chapters their research systematically and intersectionally, based on profound theoretical analysis and reasoning. Current research in the basic and implied sciences and technologies requires sound ethical practice based on a defensible moral stance. Moral norms, in our view, are deeply grounded and evolved convictions about justice and injustice, right and wrong, good and bad. It is not about rules. This scholarly book combines the insights and expertise of established South African scholars from different disciplines and backgrounds. The contributors are all deeply committed to the value and validity of science and ethical practice across the moral spectrum. Open and responsible discussions around this topic can lead to the introduction of moral

guidelines and regulations to protect the rights of individuals, animals and the environment, while simultaneously facilitating the growth of scientific practice. This collected work, with its very specific and carefully selected grouping of academic fields, aims to innovatively assist in alleviating the shortage of academic publications reflecting on the moral issues in these specific fields.

Space, Place and the Future of Learning IAP

In the face of unprecedented disruption from the COVID-19 pandemic and the rapid acceleration of digital technologies, it is necessary to rethink the competences required by teachers for meeting new and flexible learning demands. Teacher training is an area constantly evolving along with emerging social challenges that are transforming educational institutions and agents. This book provides teachers with skills, innovative solutions, cutting-edge studies, and methodologies to meet education and training system demands. In our changing world, preparing teachers worldwide for the challenges and shifts of this era involves the opportunity to exchange theories, practices, and experiences such as those contained in this book.

Review of Adult Learning and Literacy, Volume 4 BoD - Books on Demand

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conversion and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous

textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Our Changing Journey to the End: Reshaping Death, Dying, and Grief in America [2 volumes] Georgetown University Press

Changing Landscapes of Singapore illuminates both the social and the physical terrains of modern Singapore. Geographers use the term landscape to refer to visible surfaces and to the spatial dimension of social relations. Landscapes arise from particular historical circumstances, and in turn help shape social arrangements and possible courses of future development. The authors describe how the settings inhabited by various social groups in Singapore affect life experiences, and explore the impact of broader regional and international forces on Singapore. Written for non-specialists, the volume reflects fresh perspectives from the scholarship of Singaporean academics. Their work is sensitive to historical and geographical trends in the region, and also engages with broader theoretical themes.

New Forces, New Competitors, New Choices Oxford University Press

Americans often think of New Jersey as an environmental nightmare. As seen from its infamous turnpike, which is how many travelers experience the Garden State, it is difficult not to be troubled by the wealth of industrial plants, belching smokestacks, and hills upon hills of landfills. Yet those living and working in New Jersey often experience a very different environment. Despite its dense population and urban growth, two-thirds of the state remains covered in farmland and forest, and New Jersey has a larger percentage of land dedicated to state parks and forestland than the average for all states. It is this ecological paradox that makes New Jersey important for understanding the relationship between Americans and their natural world. In *New Jersey's Environments*, historians, policy-makers, and earth scientists use a case study approach to uncover the causes and consequences of decisions regarding land use, resources, and conservation. Nine essays consider topics ranging from solid waste and wildlife management to the effects of sprawl on natural disaster preparedness. The state is astonishingly diverse and faces more than the usual competing interests from environmentalists, citizens, and businesses. This book documents the innovations and compromises created on behalf of and in response to growing environmental concerns in New Jersey, all of which set examples on the local level for nationwide and worldwide efforts that share the goal of protecting the natural world.

A New Agenda for Organisational Effectiveness Livestock in a Changing Landscape, Volume 1 Drivers, Consequences, and Responses Livestock in a Changing Landscape is a collaborative effort by the United Nations Food and Agriculture Organization (FAO); International Livestock Research Institute (ILRI); FAO Livestock, Environment and Development Initiative (LEAD); Scientific Committee on Problems of the Environment (SCOPE); Swiss College of Agriculture (SHL), Bern University of Applied Sciences; French Agricultural Research Centre for International Development (CIRAD); and Woods Institute for the Environment at Stanford University.--COVER.Biogeology Evolution in a Changing Landscape

Since 2005 a dozen states and more than 15 specialties have reported a physician shortage or anticipate one in the next few years. This anticipated shortage and a worsening of physician distribution are compounded by a projected increased demand for women's healthcare services. Women's healthcare is particularly vulnerable, because the obstetrician-gynecologist workforce is aging and is among the least satisfied medical specialists. Furthermore, fellowship training in women's healthcare in internal medicine and in maternal child health in family and community medicine involves only a small portion of general internists and family physicians. In response to this challenge, the Association of American Medical Colleges called for an expansion of medical schools and graduate medical education enrollments. As we cope with significant and rapid changes in organizations and reimbursement, academic departments of obstetrics and gynecology, family and community medicine, and internal medicine have opportunities to create a unified women's health curriculum for undergraduate students, share preventive health and well-woman expertise in training programs, provide improved continuity of care, instill concepts of lifelong learning to our graduates, and better develop our research programs. This volume's chapters focus on strategic planning on behalf of academic faculty who will train the anticipated additional load of students, residents, and fellows in women's healthcare. -changing demographics of faculty -expanding roles of clinician educators -physician investigators and their future -the hidden value of part-time faculty -faculty salaries -required skillsets of academic leaders -the meaning of tenure and faculty satisfaction and retention. Recommendations presented here from authors with distinguished leadership skills indicate a consensus, but not unanimity. In furthering these goals, we summarize in the final chapter our collective expertise and offer ways to implement recommendations to better prepare for tomorrow's needs in academic women's healthcare.

Dhaka's Changing Landscape Academic Press

This thesis develops a manual for interpreters at six National Park Service areas established to preserve and interpret fossils of the Cenozoic Era: Fossil Butte National Monument (Wyoming), John Day Fossil Beds National Monument (Oregon), Badlands National Park (South Dakota), Florissant Fossil Beds National Monument (Colorado), Agate Fossil Beds National Monument (Nebraska), and Hagerman Fossil Beds National Monument (Idaho). The manual will help interpreters place their park's story into the context of three components of paleoecosystems preserved in each park: changes in geologic landscapes, global climate, and the evolution of mammals. It also provides context for interpreting modern climate change. The colorful landscapes of the Cenozoic fossil parks preserve evidence of changing landscapes, climates, and life as well as clues about change affecting our future. Because the six parks are nationally and globally significant paleontological sites, they also offer interpretive opportunities to connect visitors to the science of paleontology. The manual is written for interpreters with a variety of geology, other science and humanities backgrounds. The first three chapters provide a basic foundation of paleontological knowledge and interpretive resources applicable to all of the parks. Chapter 1 is an introduction to the scope and significance of the fossils and paleoecosystems preserved in each of the Cenozoic fossil parks. Chapter 2 outlines NPS interpretive theory and offers practical information for developing paleontology interpretation and interpreting longterm paleoecosystem evolution. Chapter 3 provides geologic content and interpretive methods for answering three common questions visitors ask: How old are these fossils? What is

a fossil? and Were all these fossils found here? Interpretive responses to these questions allow visitors to connect with the Cenozoic Era, fossilization processes, and the profound sense of place afforded by the fossil parks. Chapters 4, 5, and 6 summarize how the major components of ecosystems changed between the extinction of dinosaurs 65 million years ago and the beginning of the Pleistocene "ice ages" 2.6 million years ago. Chapter 4 details the active geologic processes-mountain building and volcanic activity-of the American West during this time period and how these processes helped form and preserve the paleoecosystems of the parks. Chapter 5 places the parks' paleoecosystems in chronological order and relates them to the global climate transition from the "greenhouse" world (nearly-tropical forests and lakes at Fossil Butte NM, John Day Fossil Beds NM, Badlands NP, and Florissant Fossil Beds NM) of 65 to 34 million years ago, to the "icehouse" world (cooler and drier woodlands, savannahs, and grasslands at John Day Fossil Beds NM, Badlands NP, Agate Fossil Beds NM, and Hagerman Fossil Beds NM) beginning 34 million years ago and continuing today. Chapter 6 traces the evolution of the horse during this time of global change from a four-toed, dog-sized browser to a hoofed, zebra-sized grazer on the grasslands of the American West. Chapter 7 describes the "ice ages" that followed the stories of the Cenozoic fossil parks. It also places the global climatic and ecosystem changes told by the Cenozoic fossil parks in the context of modern, rapid, anthropogenic climate changes. Each chapter includes "Digging Deeper" boxes that provide more detailed geologic content, or interpretive suggestions.

New Jersey's Environments Island Press

This novel, cross-disciplinary collection explains how dying, death, and grieving have changed in America, for better or worse, since the turn of the millennium. • Shows how high health care costs; concern for the environment; and a diverse, aging population necessitate rethinking the care of those who are at the end of life • Discusses controversial topics such as extending life versus quality of life and the politics and laws governing assisted suicide and integrating our final resting place into the urban landscape • Addresses the effects of the Internet and social media on customs surrounding dying and mourning • Includes cross-disciplinary insights from fields as diverse as psychology, religion, medicine, law, and popular culture

Hard Labour? Academic Work and the Changing Landscape of Higher Education Task Force

The purpose of this book is to compile and publicize the best current thinking about training and professional development for youth workers. School age youth spend far more of their time outside of school than inside of school. The United States boasts a rich and vibrant ecosystem of Out-of-School Time programs and funders, ranging from grassroots neighborhood centers to national Boys and Girls Clubs. The research community, too, has produced some scientific consensus about defining features of high quality youth development settings and the importance of after-school and informal programs for youth. But we know far less about the people who provide support, guidance, and mentoring to youth in these settings. What do youth workers do? What kinds of training, certification, and job security do they have? Unlike K-12 classroom teaching, a profession with longstanding - if contested - legitimacy and recognition, "youth work" does not call forth familiar imagery or cultural narratives. Ask someone what a youth worker does and they are just as likely to think you are talking about a young person working at her first job as they are to think you mean a young adult who works with youth. This absence of shared archetypes or mental models is matched by a shortage of policies or professional associations that clearly define youth work and assume responsibility for training and preparation. This is a problem because the functions performed by youth workers outside of school are critical for positive youth development, especially in our current context governed by widening income inequality. The US has seen a decline in social mobility and an increase in income inequality and racial segregation. This places a greater premium on the role of OST programs in supporting access and equity to learning opportunities for children, particularly for those growing up in neighborhoods of concentrated poverty. Fortunately, in the past decade there has been an emergence of research and policy arguments about the importance of naming, defining, and attending to the profession of youth work. A report released in 2013 by the DC Children and Youth Investment Corporation suggests employment opportunities for youth workers are growing faster than the national average; and as the workforce increases, so will efforts to professionalize it through specialized training and credentials. Our purpose in this volume is to build on that momentum by bringing together the best scholarship and policy ideas - coming from in and outside of higher education - about conceptions of youth work and optimal types of preparation and professional development.

Skateboarding and the Changing Landscape of Urban Youth Sports CRC Press

The Review of Adult Learning and Literacy: Connecting Research Policy, and Practice, Volume 4 is the newest addition to a series of annual publications of the National Center for the Study of Adult Learning and Literacy (NCSALL) that address major issues, the latest research, and the best practices in the field of adult literacy and learning. Volume 4 opens with an overview of significant recent developments in the field. Subsequent chapters cover a wide range of topics critical to the success of adult education and literacy services in the United States: *issues of race, class, gender, and sexual orientation; *the role of workplace education in building adults' basic skills; *the role of new learning technologies in adult education and literacy; *adult developmental theories and their implications for the teaching of adult basic education and English for speakers of other languages; and *traditional and contemporary adult learning theories, including an annotated bibliography of key resources. Intended for policymakers, scholars, and practitioners dedicated to improving the quality of adult basic education, adult English for speakers of other languages, and adult secondary education programs, Review of Adult Learning and Literacy, Volume 4 is an essential resource for the field.

The Changing Landscape of Food Governance Routledge

Drawing on data from Australia, England and New Zealand, this book addresses how neo liberal policies of successive governments have decreased autonomy of academics and increased regimes of surveillance, radically altering how academics think about and engage in their intellectual work.

Geelong's Changing Landscape Oxford University Press

This report begins by examining the state of Canadian financial services, focusing on personal services such as retail banks, credit unions, and retail asset management. Information is provided on the key players in the financial services industry, their products and performance, and how they compare internationally. The forces reshaping the industry are then reviewed, including technological advances, increasing consumer sophistication, regulatory reform, and globalization. The impact of these forces of change on banks, life insurance companies, and other Canadian financial institutions is assessed. The competitiveness of these institutions and their potential competitive strategies are analyzed, along with the degree to

which their Canadian clients (wholesale, commercial, and retail consumer) are served. Finally, international regulatory responses to the forces of change are explored and various options for national policy goals are evaluated.

Teacher Education in the 21st Century Oxford University Press

Between 1991 and 2010, Dhaka's population more than doubled to 15 million. Simultaneously, the city's contribution to the national economy almost trebled. Clearly, population growth was accompanied by an unmistakable trend of economic growth, and a significant decline in urban poverty and income inequality. On the other hand, Dhaka's high population density exacerbated serious environmental challenges, and it was soon ranked as one of the world's least livable cities. In the context of these contradictory signals of rapid urbanization, Dhaka's Changing Landscape sets to answer three most intriguing questions: Are the poorer segments of urban population, which migrate with dreams for better lives, benefitting from positive economic trends? Are these benefits sustainable? Are these benefits creating scope for this group to have a stake in the city's growing prosperity? By studying 600 households and applying comparative analysis over a span of 20 years, the authors examine demographic and economic trends to understand the patterns, scale, and complexity of urban poverty, income inequality, and rural-urban migration. Going beyond the space and poverty debate, they enlighten the readers about the quality of life questions, sustainability matters, and gender and generational roles and relations necessary to understand qualitative transformation and migrants' prospects for a better future.

Soils and Landscape Restoration Symposium Books Ltd

From the ancient origins of the proboscideans to the crisis of the living elephants, this book synthesizes the behavior, ecology and conservation of elephants, while covering also the history of human interactions with elephants. It is useful for biologists, field ecologists, wildlife administrators, historians, and conservationists.

The Changing Landscape of Spanish Language Curricula AOSIS

How can knowledge management professionals position themselves for greatest success? Providing practical guidance for professionals, and including mini-case studies of successes and failures, this book demonstrates how to map knowledge resources to support business critical capabilities, and increase the impact of knowledge management projects.

Reshaping Death, Dying, and Grief in America ABC-CLIO

The Changing Landscape of Global Financial Governance and the Role of Soft Law provides interdisciplinary perspectives on the changing landscape of global financial governance by exploring the impact and role of soft law, directly or as a precursor of hard law, pertaining to financial governance. *Ecology, Development and Conservation* NUS Press

Livestock in a Changing Landscape is a collaborative effort by the United Nations Food and Agriculture Organization (FAO); International Livestock Research Institute (ILRI); FAO Livestock, Environment and Development Initiative (LEAD); Scientific Committee on Problems of the Environment (SCOPE); Swiss College of Agriculture (SHL), Bern University of Applied Sciences; French Agricultural Research Centre for International Development

(CIRAD); and Woods Institute for the Environment at Stanford University.--COVER.

The Changing Landscape of Global Financial Governance and the Role of Soft Law National Academies Press

In most developed countries a high proportion of the population (up to 50 percent) now enter higher education at some time in their lives. Higher education is therefore very important to national economies, both as a significant industry in its own right, and as a source of trained and educated personnel for the rest of the economy. It follows that there are enormous stakes involved for a particular country even though the payoff of serious reforms may take decades and thus be counterproductive to the political forces responsible for designing and implementing such reforms since their horizons tend to be very short. This new book tackles important issues in this dynamic field.

Implications for theory and practice Edward Elgar Publishing

The chapters in this volume examine the racial and ethnic landscape of Britain in a contemporary era of neoliberalism and financial crisis. A key aspect of neoliberal thought is the belief that we live in a 'post-racial' in which the problems of racism and xenophobia have been overcome.

However, cultural retrenchment and coded xenophobia have been sweeping the political terrain, accompanied by 'new racisms' and 'new racial subjects' that only close contextual analysis can unpick. The scholarship contained in this collection challenges those who suggest that we live in a post-racial time. By focusing on particular locations in Britain at a particular moment, the volume explores local stories of 'race' and racism across changing sociopolitical ground. This book is essential reading for scholars and students of race, racism, diaspora, multiculturalism, post-colonialism, transnationalism and post-race. This book was originally published as a special issue of *Ethnic and Racial Studies*.

Old Tensions, New Discoveries CSIRO PUBLISHING

The whole landscape of space use is undergoing a radical transformation. In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide: the rise of distributed space. In the learning environment the social, political, economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching, and a wide acceptance of the importance of learning as the core of the community, resulting in the blending of all aspects of learning into one seamless experience. This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces, real and virtual, that now accommodate the experience of learning and provide pointers towards the creation and design of learning-centred communities. Part 1 looks at the entire learning universe as it now stands, tracks the way in which its constituent parts came to occupy their role, assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform. It shows that what is required is innovation within the spaces and integration between them. Part 2 finds many examples of innovation in evidence across the world - in schools, the higher and further education campus and in business and cultural spaces - but an almost total absence of integration. Part 3 offers a model that redefines the learning landscape in terms of learning outcomes, mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale. By encouraging stakeholders to creating an events-based rather than space-based identity, the book hopes to point the way to a fully-integrated learning landscape: a learning community.
