Introduction to Global Logistics Kogan Page Publishers
Shipping and Logistics Management serves to consolidate the knowledge its authors have acquired from being educators and observers of the shipping industry. Against the background of a global business environment, it explains how the shipping market functions, examining the strategic and operational issues that affect entrepreneurs in this industry. The authors discuss global trends and strategies in the shipping business, looking at the role of logistics service providers and at how the use of information technology can help shipping operations. Shipping and Logistics Management also aims to answer several important questions in the shipping industry, including: what are the shipping cost structures?, what are the patterns of sea transport? and how do companies in the shipping industry operate? An invaluable source of information for researchers and advanced, or graduate, students, Shipping and Logistics Management is also a useful reference for shipping practitioners and consultants.

From the world's most influential management consulting firm, McKinsey & Company, an insight-packed, revelatory look at how the best CEOs do their jobs based on extensive interviews with today's most successful corporate leaders—including chiefs at Netflix, JPMorgan Chase, General Motors, and Sony. Being a CEO at any of the world's largest companies is among the most challenging roles in business. Billions, and even trillions, are at stake—and the fates of tens of thousands of employees often hang in the balance. Yet, even when “can't miss” high-achievers win the top job, very few excel. Thirty percent of Fortune 500 CEOs last fewer than three years, and two out of five new CEOs are perceived to be failing within eighteen months. For those who shoulder the burden of being the one on whom everyone counts, a manual for excellence is sorely needed. To identify the 21st century's best CEOs, the authors of *CEO Excellence* started with a pool of over 2400 public company CEOs. Extensive screening distilled that group into an elite corps, sixty-seven of whom agreed to in-depth, multi-hour interviews. Among those sharing their views: Jamie Dimon (JPMorgan Chase), Satya Nadella (Microsoft), Reed Hastings (Netflix), Kazuo Hirai (Sony), Ken Chenault (American Express), Mary Barra (GM), and Peter Brabeck-Letmathe (Nestlé). What came out of those frank, no-holds-barred conversations is a rich array of mindsets and actions that deliver outsized performance. Compelling, practical, and unprecedented in scope, *CEO Excellence* is a treasure trove of wisdom from today's most elite business leaders.

Finding opportunities for innovation on the path between farmer and table. Even if we think we know a lot about good and healthy food—even if we buy organic, believe in slow food, and read *Eater*—we probably don't know much about how food gets to the table. What happens between the farm and the kitchen? Why are all avocados from Mexico? Why does a restaurant in Maine order lamb from New Zealand? In *Food Routes*, Robyn Metcalfe explores an often-overlooked aspect of the global food system: how food moves from producer to consumer. She finds that the food supply chain is adapting to our increasingly complex demands for both personalization and convenience—but, she says, it won't be an easy ride. Networked, digital tools will improve the food system but will also challenge our relationship to food in anxiety-provoking ways. It might not be easy to transfer our affections from verdant fields of organic tomatoes to high-rise greenhouses tended by robots. And yet, argues Metcalfe—a cautious technology optimist—technological advances offer opportunities for innovations that can get better food to more people in an increasingly urbanized world. Metcalfe follows a slice of New York pizza and a club sandwich through the food supply chain; considers local foods, global foods, and food deserts; investigates the processing, packaging, and storage of food; explores the transportation networks that connect farm to plate; and explains how food can be tracked using sensors and the Internet of Things. Future food may be engineered, networked, and nearly independent of crops grown in fields. New technologies can make the food system more efficient—but at what cost to our traditionally close relationship with food?

The latest title in our very successful railway modelling series tackles two areas which are fundamental to the hobby. There is little more basic in terms of railway modelling than the accurate replication of track formations and the employment of appropriate signalling arrangements which the track layout dictates. Yet it is in these very areas that many layouts fall flat. Whilst this may be excusable in the case of modellers new to the hobby, it is unforgivable for those constructing layouts for exhibition purposes. Over many years of involvement in the model railway hobby, Bob Essery has seen countless layouts in operation, some good, some indifferent and some downright appalling. As a

regular judge on the exhibition circuit, he is better placed than most to identify the strengths and weaknesses of different layouts. Drawing upon this experience, as well as his own first hand knowledge of railway operation, drawn not just from a lifetime of researching aspects of railway history and operation, but from the practical experience he gained from his time on the footplate as a fireman for British Railways, few are better placed to write authoritatively on these subjects. In *Railway Signalling and Track Plans*, Bob Essery provides a detailed analysis of the inter-relationship of track, signalling and operation. Using a wide range of examples from the prototype, he explains how this approach can help to make a model railway much more realistic. As the technology available to model railway enthusiasts, in particular Digital Command Control, becomes more sophisticated, so the need for ever more accurate track plans and signalling becomes all the more important. With the publication of this book, modellers can no longer make the excuse that this sort of information is not widely available.

In a resort town turned internment camp, a female prisoner is brutally murdered. Before the war, the hotels of Vittel hosted the

wealthiest members of French society. Now, in the winter of 1943, two of France's most luxurious resorts have been converted into an internment camp for British and American women who failed to escape the country when the German army stormed across the border. For two years, the prisoners have lived quietly, surviving on Red Cross aid packages, but now they are beginning to die. An American woman is found stabbed through the heart with a pitchfork. By the time inspectors Jean-Louis St-Cyr and Hermann Kohler arrive from Paris, rigor mortis and the February frost have frozen her solid. In her pockets are Cracker Jacks and Hershey bars--bribes intended for one of the guards. To bring justice to Vittel, St-Cyr and Kohler will have to unravel the conspiracy that is at the heart of this luxurious, elegant hell.
