This book develops a general theory of managerial decision making on the basis of a few elementary postulates. It

employs logic as the method of reasoning, systems science in general and the systemic YoYo Model in particular, as the intuitive playground. By doing so, the authors take individually background-based guesswork out of processes of decision making. All established conclusions are expected to be generally employable in real-life applications. At the same time,

the book is user friendly to a wide range of audience, coincides with people's intuition, and provides applicable results and insights for practical purposes.

[The Queen's Resistance](#) Harper Collins

In this epic debut fantasy, inspired by Renaissance France, an outcast finds herself bound to a disgraced lord and entangled in his plot to overthrow the king. Perfect for fans of *Grave Mercy* and *Red Queen*! Brienna desires only two things: to master her passion and to be chosen by a patron. Growing up in Valenia at the renowned Magnalia House should have prepared her. While some are born with a talent for one of the five passions—art, music, dramatics, wit, and knowledge—Brienna struggled to find hers until she chose knowledge. However, Brienna's greatest fear comes

true: she is left without a patron. Months later, her life takes an unexpected turn when a disgraced lord offers her patronage. Suspicious of his intent, she reluctantly accepts. But there is much more to his story, for there is a dangerous plot to overthrow the king of Maevana—the rival kingdom of Valenia—and restore the rightful queen, and her magic, to the throne. With war brewing, Brienna must choose which side she will remain loyal to: passion or blood. Plus don't miss the thrilling sequel, *The Queen's Resistance!*

The study of individual agency, innovation and entrepreneurship is currently experiencing a new birth in management and organization research. As a matter of fact, the dynamics of institutional entrepreneurship, of path creation and disruptive change, have reached the general discourse on organization and management. While this is certainly welcome, one runs the danger of overlooking the power of self-reinforcing processes in and among organizations. Such dynamics run, to a large extent, beyond the control and attention of individuals and organizations and may thus constitute tenacious limits to the innovative endeavors aforementioned. This volume is dedicated to the theoretical and empirical study of self-reinforcements

and decidedly redirects attention to these processes, including: escalating commitment, organizational imprinting and path dependence, and sheds light on the genesis and rise of their pervasive influence. It includes a selection of papers, most of which have been presented and discussed at the sub-theme on "Self-reinforcing organizational processes" of the 27th EGOS Colloquium held in 2011 in Gothenburg, Sweden.

George R.R. Martin's Game of Thrones series. Mare Barrow's world is divided by blood—those with common, Red blood serve the Silver-blooded elite, who are gifted with superhuman abilities. To cover up this impossibility, the king forces her to play the role of a lost Silver princess and betroths her to one of his own sons. As Mare is drawn further into the Silver world, she risks everything and uses her new position to help the Scarlet Guard—a growing Red rebellion—even as her heart tugs her in an impossible direction. When you look at fine connections, it's hard to say exactly what relation "Alice in Wonderland" has to this book, "Through the Looking-Glass," Oh, it's plainly the same girl, though she seems older, here, and some characters (like Tweedledum and Tweedledee) appear in both. But she doesn't get there the same way, and doesn't refer to her adventures in Wonderland so much as once. Oh well: maybe it's all a dream and she can't remember the last one -- or maybe the magic through the Looking-Glass has

hold of her, just as it has hold of Humpty Dumpty, or the Walrus and the Carpenter.

This book presents the latest research and theory about organizational evolutionary change. It brings together the work of organization theorists who have played key roles in challenging the orthodox adaptation views that prevailed until the beginning of the 1980s. Joel A.C. Baum and Jitendra V. Singh emphasize hierarchy of evolutionary processes at the intraorganizational level, the organizational level, the population level, and the community level. Derived from a conference held at the Stern School of Business at New York University, *Evolutionary Dynamics of Organizations* is organized in a way that

gives order and coherence to what has been a diverse and multidisciplinary field.

Platform Ecosystems Harper Collins

This book aims at renewing the attention on a niche field, Cultural Festivals, so important for valorizing cultural traditions and local heritage visibility as well as social well-being. Following the disruptive consequences of the COVID-19 pandemic, this fragile sector deserves more attention from public authorities and stakeholders at national and European levels with a suitable and dedicated plan of recovery and valorization. This book provides a comparative analysis of Cultural Festivals in Europe, taking insights from an international range of high-level scholarly contributors. Individual

chapters highlight and analyse challenges around the organisation, management and economics of Cultural Festivals. As a whole, the book provides a comprehensive overview of scholarly research in this area, setting the scene for the future research agenda. Matters related to educational programs and new audience development, as well as challenges related to digitalization, are also included. The book employs a tradition versus innovation lens to help readers account for the consequences of the digital revolution, new audience development and an educational agenda. The result is a book which will be valuable reading for researchers, academics and students in the fields of event and cultural management and beyond.

Making strategy requires undertaking major—often irreversible—decisions aimed at long-term success in an uncertain future. All leaders must formulate a clear course of action, yet many lack confidence in their ability to think systematically about their strategy. They struggle to apply the abstract lessons offered by conventional approaches to strategic analysis to their unique contexts. Making Great Strategy resolves these challenges with a straightforward, readily applicable framework. Jesper B. Sørensen and Glenn R. Carroll show that one factor underlies all sustainably successful strategies: a logically coherent argument

that connects resources, capabilities, and environmental conditions to desired outcomes. They introduce a system for formulating and managing strategy through a set of three core activities: visualization, formalization and logic, and constructive argumentation. These activities can be implemented in any organization and are illustrated through examples and case studies from well-known companies such as Apple, Walmart, and The Economist. This book shows that while great strategic thinking is hard, it is not a mystery. Widely applicable and relevant for managers and leaders at all levels, especially executive teams charged with setting the course of their organizations, it is essential reading for anyone faced with practical problems of strategic

management.

"The definitive work on the West's water crisis." --Newsweek The story of the American West is the story of a relentless quest for a precious resource: water. It is a tale of rivers diverted and dammed, of political corruption and intrigue, of billion-dollar battles over

water rights, of ecological and economic disaster. In his landmark book, Cadillac Desert, Marc Reisner writes of the earliest settlers, lured by the promise of paradise, and of the ruthless tactics employed by Los Angeles politicians and business interests to ensure the city's growth. He documents the bitter rivalry between two government giants, the Bureau of Reclamation and the U.S. Army Corps of Engineers, in the competition to transform the West. Based on more than a decade of research, Cadillac Desert is a stunning expose and a dramatic, intriguing history of the creation of an Eden--an Eden that may only be a mirage. This edition includes a new postscript by Lawrie Mott, a former staff scientist at the Natural Resources Defense Council, that

updates Western water issues over the last two decades, including the long-term impact of climate change and how the region can prepare for the future.

The Nature of Value presents a theory of how economic value functions and how it drives growth, starting with tiny sparks of innovation and scaling all the way up to the full scope of the economy. Nick Gogerty's exploration of value borrows

from a wide array of disciplines, including anthropology, psychology, physics, sociology, and ethics, but most of all, it examines how evolution's processes can help investors understand the economy and how investors can use this new understanding to improve their allocation decisions. Starting with a look at how innovations can help firms succeed, Gogerty looks at the economic niches in which firms compete and explores how firms can create defensive moats to enhance their chances of survival. He shows allocators how to adjust their actions for best performance and returns and what to look for when assessing company management, supporting his arguments with extensive data and years of practitioner experience from scientific, social, and

economic disciplines. Intuitive illustrations are used to illuminate central concepts and ideas. Gogerty's practical takeaways, couched in vivid explanations, will help investors of all backgrounds gain fresh insight into market mechanics.

Self-Reinforcing Processes in and among Organizations

Routledge

All the talk about "open innovation" and externally-focused innovation assumes that "one size fits all" in terms of what network-centric innovation is and how companies should harness external creativity. But the reality is that there is no one right way to master this tool. For instance, loosely governed community-based innovation projects are a very different animal from tightly-orchestrated development projects driven by a large firm. As the landscape of network-centric innovation becomes more diverse and more confusing, there is a desperate need to structure the landscape to better understand different

models for network-centric innovation. This book brings clarity to the confusion. Further, it argues that managers cannot rely on anecdotal success stories they read about in the press to implement a network-centric innovation strategy. They need rigorous and analytical advice on what role their company should play in an innovation network, what capabilities they need to create, and how they need to prepare their organization for this significant shift in the innovation approach. This book offers a practical and detailed roadmap for planning and implementing an

externally-focused innovation strategy.
