Peanut Agriculture and  
Production Technology:  
Integrated Nutrient  
Management focuses  
on agricultural  
techniques and

integrated nutrient  
management of  
peanuts (*Arachis*  
*hypogaea* L.). Peanuts  
are the second most  
important oil crop of  
India, occupying 5.7  
million hectares, with  
an average production  
of 0.8 ton/ha, which is  
23.5% of the India's  
total oil seed  
production. Worldwide  
annual production of  
shelled peanuts was 42

million metric tons in 2014. It is the world's 4th most important source of edible oil and the 3rd most important source of vegetable protein. The volume includes basic and advanced information on production, agrotechniques, and integrated nutrient management of *Arachis hypogaea* L. crop plant. It studies the physiology of the peanut, looking at the proper environmental conditions for optimal growth as well as under various subnormal conditions. It explores the methods of nitrogen application as well as the influence of different sowing dates and population densities to harvest its full yield potential. The book covers methods to achieve balanced

nutrition, including using organic manures in groundnut farming to enhance yielding ability. The book will be a rich resource for those in agriculture, horticulture, and allied sciences, particularly for agricultural scientists in plant and crop physiology, agronomy, and soil science. Farm owners and managers of peanut crops and production will also benefit from the information provided in this volume.
