Suicidal Behavior in Children and Adolescents Routledge

This book is based upon experiences from the Stop Youth Suicide Campaign (SYS), a community-based youth suicide prevention program, led by the Division of Adolescent Medicine at the University of Kentucky Children's Hospital, Lexington. This program raises awareness and educates government agencies, teachers, parents, and students about the high risk behaviors that can lead to youth suicide. It provides education for medical care agencies to recognize and screen for adolescent depression and suicide, connects youth, parents, citizens, caregivers, and professionals with appropriate support services. The Stop Youth Suicide Campaign is a holistic suicide awareness campaign. In other words, the program seeks to provide appropriate information and assist all stakeholders, e.g. individuals, communities and governments/policy makers to make informed decisions. In Kentucky, the campaign has been successful in changing some laws, introducing suicide education and training at schools, and provides interventional services as well as prevention strategies throughout Kentucky. A measure of success is a sustained drop in suicide rates over time, correlated to when the Stop Youth Suicide Campaign started. In this book, you will find an overview of youth suicide, and several chapters looking at suicide from different points of view to create a holistic approach to this public health issue.

The Suicidal Patient Elsevier Health Sciences

"Cognitive Therapy for Suicidal Patients: Scientific and Clinical Applications crystallizes more than 3 decades of basic, clinical, and therapeutic research, providing a comprehensive review of the psychological factors associated with suicidal behavior. The authors describe their cognitive model of suicide, the instruments they developed to classify and assess suicidal behavior, and effective cognitive intervention techniques for suicidal individuals. The book includes a step-by-step protocol for cognitive therapy that is vividly illustrated in an extended case study. Individual chapters are dedicated to applying the protocol with special

populations and overcoming challenges when working with suicidal patients."--pub. desc.

The Psychology of Suicide: From Research Understandings to Intervention and Treatment Guilford Press

Every year, about 30,000 people die by suicide in the U.S., and some 650,000 receive emergency treatment after a suicide attempt. Often, those most at risk are the least able to access professional help. *Reducing Suicide* provides a blueprint for addressing this tragic and costly problem: how we can build an appropriate infrastructure, conduct needed research, and improve our ability to recognize suicide risk and effectively intervene. Rich in data, the book also strikes an intensely personal chord, featuring compelling quotes about people's experience with suicide. The book explores the factors that raise a person's risk of suicide: psychological and biological factors including substance abuse, the link between childhood trauma and later suicide, and the impact of family life, economic status, religion, and other social and cultural conditions. The authors review the effectiveness of existing interventions, including mental health practitioners' ability to assess suicide risk among patients. They present lessons learned from the Air Force suicide prevention program and other prevention initiatives. And they identify barriers to effective research and treatment. This new volume will be of special interest to policy makers, administrators, researchers, practitioners, and journalists working in the field of mental health.

Books of Abstracts of the 16th World Congress of the International Association for Child and Adolescent Psychiatry and Allied Professions (IACAPAP) New Growth Press

Design and implement appropriate, effective social work education programs! This vital human behavior textbook for graduate-level social work students emphasizes the biopsychosocial framework with a psychodynamic and developmental perspective. Written from the perspective of a classroom teacher, faculty advisor, and clinician, this book discusses ego functions, defenses, psychoanalytic theory, object relations, attachment theory, self-psychology, constructivism, and cognitive-behavioral theories. In addition, current social problems

such as violence and abuse are addressed. *Human Behavior in the Social Environment: Interweaving the Inner and Outer Worlds* addresses development through the life cycle, discussing the developmental challenges, tasks, and problems of each stage. Presenting complex concepts in a clear and understandable way, it also examines and integrates systems and organizational factors, as well as the impact of culture on clients and treatment programs. Each chapter of *Human Behavior in the Social Environment* includes learning exercises and suggested readings. Some of the issues emphasized in this text are: development though the life cycle and the challenges, tasks, and problems of each stage the diversity of forms of families patterns of internal organization and communication within families illness and disabilities mental health problems such as schizophrenia, depression, borderline personalities, anxiety disorders, addictions, and developmental disabilities With case vignettes as well as material from literary works, biographies, and newspapers, this well-referenced volume illustrates the complexities of human existence, the multiple social conflicts operating in society, and the relevance of social policy dilemmas.

Treating Troubled Adolescents Amer Psychological Assn

This volume presents a comprehensive and practical approach to the treatment of suicide and NSSI for adolescents utilizing a mentalizing framework. The beginning of the text provides up-to-date information on the theory of a mentalizing therapy in order to ground the readers in the neuroscientific underpinnings of a mentalizing approach. Next chapters provide information on the fundamental building blocks of a mentalizing therapy at the individual and family level. These chapters provide step-by-step approaches in order to provide examples of the techniques involved in mentalizing treatment that can be employed to address suicidality and NSSI. The next chapter builds on these concepts as the reader learns about mentalizing failures involved in common co-morbidities in adolescents who are experiencing suicidality and/or employing NSSI. The next several chapters cover practical issues related to working within this patient population including the key concept of social systems and connections for both providers and adolescents, the ability of mentalizing theory and therapy to integrate with other effective

therapies, how to approach sessions after a suicide attempt, resiliency for patient, family and the provider, along with important self-care for a therapist if a patient commits suicide. The final chapter brings all of the aforementioned elements together in order for the reader to conceptualize employing a mentalizing approach to adolescents and their families when suicide and NSSI concerns are a predominate focus of care. Illustrations of specific therapeutic approaches and a list of resources and guidelines where available are also included. Adolescent Suicide and Self-Injury is an excellent resource for all clinicians working with youths at risk for suicide and/or self-injury, including psychiatrists, psychologists, pediatricians, family medicine physicians, emergency medicine specialists, social workers, and all others.

On Transitions from Group Care Perigee Trade

Abstract: This collection of papers discusses the recognition, treatment, and prevention of adolescent suicide. Topics include: youth suicide risk assessment; residential management of suicidal adolescents; completed suicide in children and adolescents; and components of school-based suicide prevention.

The Recognition and Management of Early Psychosis a Preventive Approach National Academies Press

Drawing on research, clinical types, case histories, and conversations with suicidal young people and their friends, the author explores the motives underlying suicide among youths and the recognition of symptoms of depression.

Adolescent Health: Background and the effectiveness of selected prevention and treatment services Hogrefe Publishing

Inform yourself with thorough and accurate knowledge about the incidence of adolescent suicide. Adolescent Suicide serves to correct erroneous conceptions--held by the public and professionals--about the nature of suicidal behavior among the young, thereby promoting the opportunity for more prompt and effective evaluation and management of potentially fatal incidents. In this landmark volume, authorities address the problem of suicide among adolescents, which has emerged in recent years as a significant public health problem. In-depth

discussions of the epidemiology and behavioral characteristics of youth who attempt and complete suicide, risk factors, methods of death, circumstances of the suicidal act, and reasons for the dramatic increase in the phenomenon provide social workers, educators, psychologists, and psychiatrists with systematic information that can be used in both prevention and intervention efforts. There is also a wealth of valuable material here on school-based suicide prevention programs, strategies for managing and counseling the relatives, peers, and classmates of individuals who have committed suicide, and coping with suicide in residential treatment centers.

Adolescent SuicideRoutledge

American Psychiatric Association Practice Guidelines American Psychiatric Publishing

Filling a tremendous need, this highly practical book adapts the proven techniques of dialectical behavior therapy (DBT) to treatment of multiproblem adolescents at highest risk for suicidal behavior and self-injury. The authors are master clinicians who take the reader step by step through understanding and assessing severe emotional dysregulation in teens and implementing individual, family, and group-based interventions. Insightful guidance on everything from orientation to termination is enlivened by case illustrations and sample dialogues.

Appendices feature 30 mindfulness exercises as well as lecture notes and 12 reproducible handouts for "Walking the Middle Path," a DBT skills training module for adolescents and their families. Purchasers get access to a Web page where they can download and print these handouts and several other tools from the book in a convenient 8 1/2" x 11" size. See also Rathus and Miller's DBT? Skills Manual for Adolescents, packed with tools for implementing DBT skills training with adolescents with a wide range of problems.ÿ

Nonsuicidal Self-Injury Pia Press

Suicide is a highly complex and multifaceted phenomenon, with many contributing and facilitating factors and variables. However, given its being one of the most severe human behaviors, an obvious focus would be to identify the underlying psychological mechanisms and processes that may lead to suicidal ideation and behavior. This eBook is dedicated to studies exploring various

approaches to the psychology of suicidal behavior as well as of non-suicidal self-injury (NSSI). The purpose of this eBook is to shed light on in-depth examinations of the current knowledge and empirical data regarding models, theories, and specific dimensions and variables that may help us increase the psychological understanding of suicidal phenomena. The specific goal is to identify particular psychological characteristics that may be used to develop prevention and intervention methods and programs. We believe that this eBook can contribute to the understanding of this behavior and help to develop specific tools, therapeutic guidelines, and programs that may help reduce the number of suicides occurring annually. This eBook is dedicated to our dearest friend, Dafni Assaf, who was one of the greatest leaders of the suicide prevention program in Israel.

Reducing Suicide Cambridge University Press

Every year, about 30,000 people die by suicide in the U.S., and some 650,000 receive emergency treatment after a suicide attempt. Often, those most at risk are the least able to access professional help. Preventing Adolescent Suicide Frontiers Media SA

Examines some of the causes of suicide among teenagers and discusses ways to recognize potential victims and prevent this tragedy.

More Than Moody Adolescent Suicide

This three volume work presents the Office of Technology's assessment of the physical, emotional, and behavioral health status of contemporary American adolescents, including those living in poverty, racial and ethnic minority groups, Native Americans, and rural adolescents. Specific topics covered are identifying risk and protective factors for adolescent health problems, evaluating options in the organization of health services and technologies available to adolescents, assessing options in the conduct of national health surveys to improve collection of adolescent health statistics, and identifying gaps in research on the health and behavior of adolescents.

Springer Science & Business Media

The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.

Evidence-Based Treatment Approaches for Suicidal Adolescents

American Psychiatric Pub

This book seeks to answer the question of how providers of residential treatment services can improve the transition process when children in their care are transferred to less restrictive situations. It looks at working with sexually aggressive youth, adolescents with behavioral or conduct disorders and the families of young people in residential care facilities as well as model transitional living programs, ways to integrate family work into residential care and programs that focus on social/life skills training.

Adolescent Suicide Capstone

Grounded in extensive research and clinical experience, this

manual provides a complete guide to interpersonal psychotherapy for depressed adolescents (IPT-A). IPT-A is an evidence-based brief intervention designed to meet the specific developmental needs of teenagers. Clinicians learn how to educate adolescents and their families about depression, work with associated relationship difficulties, and help clients manage their symptoms while developing more effective communication and interpersonal problem-solving skills. The book includes illustrative clinical vignettes, an extended case example, and information on the model's conceptual and empirical underpinnings. Helpful session checklists and sample assessment tools are featured in the appendices.

Too Young to Die DIANE Publishing

Many teenagers are not navigating adolescence successfully. Often, even though they have material things, the latest electronics, and spending money, they can be stressed, unhappy, and feel directionless. For an increasing number of teenagers, their struggle to manage pressures and expectations leads them to consider suicide as their only means of escape. Family and children's counselor Julie Lowe takes a look at some of the reasons teenagers are increasingly vulnerable to suicide and what factors lead to it. She offers helpful advice for all those who work with teenagers to recognize suicide warning signs and shares ways to guard against hopelessness and help them find reasons to live. Loving, trustworthy adults (parents, mentors, youth workers, and friends) need to establish solid relationships with teenagers that will serve as the basis for the direction and instruction that they still acutely need. Teenagers long to be known and accepted. Giving them a solid foundation that they are known and loved by God, displaying care, sacrificial giving, genuine compassion, faith in Christ, and being there for them builds a foundation that will not be easily shaken and will provide a lifeline to teens who are struggling.

Teens and Suicide Springer Nature

"Suicides are preventable. Even so, every 40 seconds a person dies by suicide somewhere in the world and many more attempt suicide. Suicides occur in all regions of the world and throughout

the lifespan. Notably, among young people 15-29 years of age, suicide is the second leading cause of death globally. Suicide impacts on the most vulnerable of the world's populations and is highly prevalent in already marginalized and discriminated groups of society. It is not just a serious public health problem in developed countries; in fact, most suicides occur in low- and middle-income countries where resources and services, if they do exist, are often scarce and limited for early identification, treatment and support of people in need. These striking facts and the lack of implemented timely interventions make suicide a global public health problem that needs to be tackled imperatively. This report is the first WHO publication of its kind and brings together what is known in a convenient form so that immediate actions can be taken. The report aims to increase the awareness of the public health significance of suicide and suicide attempts and to make suicide prevention a higher priority on the global public health agenda. It aims to encourage and support countries to develop or strengthen comprehensive suicide prevention strategies in a multisectoral public health approach. For a national suicide prevention strategy, it is essential that governments assume their role of leadership, as they can bring together a multitude of stakeholders who may not otherwise collaborate. Governments are also in a unique position to develop and strengthen surveillance and to provide and disseminate data that are necessary to inform action. This report proposes practical guidance on strategic actions that governments can take on the basis of their resources and existing suicide prevention activities. In particular, there are evidence-based and low-cost interventions that are effective, even in resource-poor settings. This publication would not have been possible without the significant contributions of experts and partners from all over the world. We would like to thank them for their important work and support. The report is intended to be a resource that will allow policy-makers and other stakeholders to make suicide prevention an imperative. Only then can countries develop a timely and effective national response and, thus, lift the burden of suffering caused by suicide and suicide attempts from individuals, families, communities and society as a whole."--Preface, page 03.
