MOHAMMAD MAXIMILIAN

Agronomic Soil Management Practices Allied Publishers
 In addition to constituting an evolving area of inquiry within the social sciences, agricultural certification, and particularly its Fair Trade and organic components, has emerged as a significant tool for promoting rural development in the global South. This book is unique for two reasons. First, in contrast to existing studies that have tended to examine Fair Trade and organic certification as independent systems, the studies presented in this book reveal their joint application within actual production settings, demonstrating the greater complexity entailed in these double certification systems through the generation of contradictions and tensions compared with single certification systems. Second, the authors, who are both Asian, reveal the realities of applying Fair Trade and organic certification systems within Asian agriculture. In doing so, they challenge the fact that most Fair Trade studies have been undertaken by Western scholars who have tended to focus on Latin American and African producers. Drawing on a wealth of grounded case studies conducted in India,

Thailand, and the Philippines, this pioneering study on double certification makes a significant contribution to studies on Fair Trade and organic agriculture beyond Asia.

Andaman and Nicobar Islands, Development Report
Springer

Many books are written on the subject of organic farming, covering different aspects. This book covers history of organic farming and global scenario of organic farming, besides all fundamental aspects like principles, potentials, prospects, organic practices and problems in adoption of organic farming. This book is expected to be used by all students, research workers, voluntary organisations, policy makers and all those who are concerned to promote organic farming as a comprehensive dossier to cover most aspects of organic farming.

Organisation and Governance New India Publishing
 This book is a compendium of papers presented in the 'International Conference on Emerging Global Economic Situation: Impact on Trade and Agribusiness in India'. The book is structured in four parts with thirty four papers. The first part discusses the aspects related to Crop Production and Agriculture Growth, while second part highlights the issues related to Agriculture Marketing and Prices in India. The third part of book

presents the important issues related to Credit Income Insurance in India and last part presents innovation and Factors Influencing Sector. This book will be very useful for all those who are interested in issues related to growth of agriculture and allied sectors in our country.

Concepts, Key Terms, Case Studies New India Publishing

This book discusses the various aspects, from production to marketing of turmeric and ginger, the world's two most important and invaluable medicinal spice crops. The book begins with their origin and history, global spread, and goes on to describe the botany, production agronomy, fertilizer practices, pest management, post-harvest technology, pharmacology and nutraceutical uses. The book presents the economy, import-export and world markets involved with reference to turmeric and ginger. It would be a benchmark and an important reference source for scientists, students, both undergraduate and post graduate, studying agriculture and food sciences and policy makers. It would be of great interest to professionals and industry involved in spice trade.

The Hidden Realities Scientific Publishers

Advances in Organic Farming: Agronomic Soil Management Practices focuses on the integrated interactions between soil-plant-microbe-environment elements in a functioning ecosystem. It explains sustainable nutrient management under organic farming and agriculture, with chapters focusing on the role of nutrient management in sustaining global ecosystems, the remediation of polluted soils, conservation practices, degradation of pollutants, biofertilizers and biopesticides, critical biogeochemical cycles, potential responses for current and impending environmental change, and other critical factors. Organic farming is both challenging and exciting, as its practice of "feeding the soil, not the plant provides opportunity to better understand why some growing methods are preferred over others. In the simplest terms, organic growing is based on maintaining a living soil with a diverse population of micro and macro soil organisms. Organic matter (OM) is maintained in the soil through the addition of compost, animal manure, green manures and the avoidance of excess mechanization. Presents a comprehensive overview of recent advances and new developments in the field OF research within a relevant theoretical framework Highlights the scope of the inexpensive and improved management practices Focuses on the role of nutrient management in sustaining the ecosystems

Training Manual for Organic Agriculture Elsevier

Turmeric has been used as a medicine, a condiment, and a dye since at least 600 B.C., while ginger has been used extensively throughout history for its medicinal purposes. The Agronomy and Economy of Turmeric and Ginger brings these two important plants together in one reference book, explaining their history, production techniques, and nutritional and medicinal properties in detail. This book is intuitively organized by plant and use, allowing quick access to information. It puts the uniquely Indian use and history of turmeric and ginger plants into a global context of production and economic aspects. It explores the plants from a botanical perspective, and goes into details of their chemical composition as well. Rounding out the book are chapters on disease and pest control issues. The book is a valuable resource for those involved in the production and marketing of these plants, as well as those looking for more information on the medicinal and nutritional properties of turmeric and ginger. The first book to bring together extensive information about turmeric and ginger Incorporates medicinal, nutritional and agricultural aspects of the two plants Offers a global perspective

Advances in Organic Farming Springer Nature

The production and supply of organic seed is the need of the hour to facilitate the organic Agriculture, which ensures the production of the organic food products free from the toxic substances for better human health. But, also to conserve the soil and environmental health for well-beings of the human life including the flora and fauna. Keeping the importance of the organic agriculture, the book on "Organic seed" has been compiled which is first of its kind in India. This book consists of four major parts. Part I deals with the documentation of the indigenous varieties in cereals, pulses, oilseeds and vegetables. In Part II, an overview of organic agriculture, requirements and technologies for organic seed production with special reference to rice and cotton, seed quality treatments, certification, marketing and storage of organic seed are discussed. Part III includes the technologies for production, processing and storage of seed. Role of community seed bank, seed fairs and farmers participatory plant breeding are included in the Part IV.

Sustainable Agriculture Discovery Publishing House

The production of this manual is a joint activity between the Climate, Energy and Tenure Division (NRC) and the Technologies and practices for smallholder farmers (TECA) Team from the Research and Extension Division (DDNR) of FAO Headquarters in Rome, Italy. The realization of this manual has been possible thanks to the hard review, compilation and edition work of Nadia Scialabba, Natural Resources officer (NRC) and Ilka Gomez and Lisa Thivant, members of the TECA Team. Special thanks are due to the International Federation of Organic Agriculture Movements (IFOAM), the Research Institute of Organic Agriculture (FiBL) and the International Institute for Rural Reconstruction (IIRR) for their valuable documents and publications on organic farming for smallholder farmers.

Organic Production of Black Pepper, Ginger and Turmeric NIIR PROJECT CONSULTANCY SERVICES

The global changes warranted fastness in food production system and fast foods. In tune with demand, crop production also oriented accordingly. However, the proverb 'Health is a Wealth' is reminded us to keep vigil on system and method of food production and food safety. The ill-effect of conventional chemical based farming well documented and public realized the importance organically produced food and efforts are being made to popularize the organic production. India is a "Land of Spices", each state or union territory in India cultivates one or other spice. Since spices form a part of many medicines the demand for organically produced spices is increasing considerably. Assuming a market growth of 10% in Europe, USA and Japan for organic spice products the world demand for organic spices may grow to 57000 tonnes in the next 10 yeaLarge scale use of high analysis fertilizers and pesticides result environmental hazards and imbalances in soil nutrients. Since spices are high valued and export oriented in nature it is imperative to keep the levels of pesticide residues below tolerance limits in view of the standards set by the importing countries. Hence the book on "Organic Spices" is timely and covers all aspects of organic spice production. The topic includes historical spice trade and importance of spices in food chain. Brief account on organic agriculture movement in the world and its present status and opportunity for organic spices in the world market are given. The chemistry and different methods of composting are included in the organic manures chapter will be informative. Microbes play a greater role in agriculture, a separate chapter devoted on microbes and plant growth promoting rhizobacteria would definitely enrich the readeNot only that, the topics on biological control of insect pests, nematodes, fungus and bacteria of spices highlighted in separate chapters would be of interest in organic production system. The importance, composition, uses, botany

and varieties, organic way of production of spices like black pepper, cardamom, ginger, turmeric, chillies and paprika, nutmeg, vanilla, seed spices like cumin, fennel, fenugreek, coriander and their harvest and post harvest processing are enumerated. The chapters on good agricultural practices (GAP) and organic certification procedures outlined for adoption. This would serve as a reference book for researchers, teachers and students besides farmers, traders and consumers.

Organic Production of Pepper, Ginger and Turmeric Scientific Publishers

The book "Principles of Organic Farming: Textbook" has been designed to fulfill the requirement of undergraduate students of agriculture faculty considering the syllabus of 5th Dean's committee of ICAR. This book makes an attempt to present the available information on organic agriculture in a very simple and lucid language based on the experience of the author. The book contains chapters on an introduction to organic farming, promotion of organic agriculture in India, organic ecosystems and their concepts, organic nutrients resources and their management, insect pests and disease management in organic farming, weed management in organic farming, organic crop production, certification process and standards of organic farming in India, processing and labelling of organic produce, economic viability of organic farming, marketing and export potential of organic products.

Contents: Gender Dimension in Economic Reform Programmes, Gender Related Issues of Urban Informal Labour Market, Gender Discrimination and Poverty, Women's Participation in Rural Non-Farm Employment, Factors Influencing the Participation of Females in RNFE, Women in Farm and Non-Farm Employment in Tirunelveli District, Tamil Nadu, Employment of Women in the Farm and Non-farm Sector in Goa, Women Enterprises in the Informal Sector in Punjab, Globalisation and Empowerment of Women, Need for Empowerment of Tribal Women, Endowment, Entitlement and Empowerment, Information Economy and Empowerment of Women, Views and Perceptions of DWCRA Beneficiaries, Empowerment of Women Through DWCRA Programme, Empowerment of Women, Welfare and Empowerment of Women in India, Conditions of Scheduled Caste Women in Social Sector, Strategies for Empowerment of Women in India, Problems of Girl Child Labour in India, Women Empowerment.

The Geography of Cardamom (Elettaria cardamomum M.) CRC Press

Spices constitute an important group of agricultural commodities which, since antiquity, have been used for flavouring foods. Some species are used in the pharmaceutical, perfumery, cosmetics and related industries, and others possess colourant, preservative, antioxidant, antiseptic and antibiotic properties. India is one of the leading spice producing and exporting countries in the world. In addition, large quantities of spices are consumed within the country for seasoning of food and for several other purposes. No other country in the world has such a diverse variety of spice crops as India. This book reflects the intensive research carried out on this group of 42 spice crops since 1971, the improvement in agro-techniques and the release of many high-yielding varieties. It provides exhaustive information on all aspects of cultivation, harvesting and processing of each crop and will be an invaluable aid to students, teachers and growers of spice crops, both individual and corporate.

Indian Spices Scientific Publishers

Herbs and spices are among the most versatile and widely used ingredients in food processing. As well as their traditional role in

flavouring and colouring foods, they have been increasingly used as natural preservatives and for their potential health-promoting properties, for example as antioxidants. Edited by a leading authority in the field, and with a distinguished international team of contributors, the Handbook of herbs and spices provides an essential reference for manufacturers wishing to make the most of these important ingredients. The first group of chapters looks at general issues including quality indices for conventional and organically produced herbs, spices and their essential oils. The main body of the handbook consists of over twenty chapters covering key spices and herbs from aniseed, bay leaves and black pepper to saffron, tamarind and turmeric. Each chapter covers key issues from definition and classification including: chemical structure cultivation post-harvest processing uses in food processing functional properties quality indices methods of analysis The Handbook of herbs and spices is a standard reference for all manufacturers using herbs and spices in their products.

Turmeric (Curcuma longa L.) and Ginger (Zingiber officinale Rosc.) - World's Invaluable Medicinal Spices Routledge

This book "Spices" comprehends and provides latest information on economic importance, botany, chemical composition, crop improvement, agro-technology, post harvest technology and end uses of 52 spices identified by the spices board. The book is organized into 6 chapters. The authors with their vast experience in tropical spices have brought their scientific as well as practical experience in collecting and presenting the information concisely. Although the book is a sublimation of the Indian expertise in spices, the contents are very useful and relevant internationally. The book is targeted to the students and researchers in the area of horticulture, agriculture, industry people, exporters processors and end users.

Handbook of Herbs and Spices Scientific Publishers

This book examines the production, procurement and marketing aspects of the organic produce sector with the focus on marketing agencies and producers in each commodity/product chain. It analyses the various institutional arrangements like contract farming, networking and producer level co-ordination prevalent in this sector. Based on case studies of various types of organic players in India, both in export market as well as in domestic market.

Cultivation of Spice Crops Springer Nature

This book entitled "Agroforestry for Climate Resilience and Rural Livelihood" would help the readers to gain knowledge on importance of agroforestry for climate change and providing ecosystem services through many ways. This is a testimony and a ready reckoner to help to solve the challenges of climatic vagaries and resource degradation of natural resource bases. The compilation would certainly provide the steps that should be taken to meet the twin objective of climate resilience and livelihood security through adoption of agroforestry models. This book would definitely be helpful for policy makers, planners, academicians, students and scientists to suggest the technologies and strategies to the farmers for enhancing their productivity, economic stability, meeting nutritional security under the changing climatic scenario. The key features include the idea of ecosystem services relevance in present day context, which otherwise was being neglected. The voluminous compilation will act as a boost for farmers to adopt agroforestry system in their pursuit for better environmental management and resilience against the climate change.

Principles of Organic Farming: Textbook Academic Foundation

Horticulture is fast emerging as a major commercial venture, because of higher remuneration per unit area and the realization that consumption of fruits and vegetables is essential for health

and nutrition. In the last one decade, export potential of horticultural crops has significantly increased attracting even multinationals into floriculture, processing and value added products. Since the horticultural produce especially fruits and vegetables are consumed afresh, consumers expect residue-free produce. In modern society where consumers are becoming increasingly health conscious and environmentally aware, a major market for organic foods has developed. The organic sector, in particular, has sprung back into life to become one of the most dynamic sectors in the international food market. The present book is an attempt which comprehensively deals with both principles and practices. It is divided into two parts. The first part deals with the principles of organic farming covering aspects such as enrichment of soil with organic matter, cropping systems, bio-fertilizers, weed management and pest management. The second part of the book deals with package of practice for organic farming in fruits, vegetables, ornamentals, medicinal, aromatic, plantation, spice and tuber crops. Three aspects, namely - nutrient management, weed management and pest management are dealt with separately for each crop. An entire chapter is devoted for sources of critical inputs used for organic farming which would be very much useful to the organic farmers to procure the same. This book is a practical guide to practicing organic farmers of horticulture crops. Further, it is a useful reference to policy makers, research workers and students. The material can also be used for teaching undergraduate and post-graduate courses.

HORTICULTURE AND LIVELIHOOD SECURITY CreateSpace

This book considers all aspects of black pepper from its growth,

as a flowering vine, to how the dried fruit (peppercorn) is used as a spice and traded as a commodity. It is the economic mainstay of several India states and, principally, in Kerala State, with the Indian subcontinent being the largest black pepper producer. Indonesia has also emerged as a large producer of black pepper. Black pepper commands a leading position among the spices and has an immense commercial importance to world trade, finding its way onto the dining table of millions around the world, on the European and North American continents, and Japan. The use of black pepper ranges from a simple dietary component and flavour enhancer, to that of a spice with huge pharmacological benefits.

The Geography of Black Pepper (Piper nigrum) World Scientific
 ?Modern? integrated value chains need not necessarily exclude the smallest producers as this book aims to explain in detail by case studies. The issue is particularly topical in India, where modern retailing has come to the scene only recently and the majority of whose population are still small farmers and artisans. Following a brief introduction to the problem, 14 case studies from India are presented to illustrate how it is being solved in practice. The book also discusses the impact of organized retailing on small-scale traders, and finally analyses the case studies for an overview, with conclusions and learnings drawn from them. Inclusive Value Chains shows by practical examples that it is possible to link the smallest producers of fresh produce, commodities and handicrafts profitably, to modern integrated markets, within the country of origin as well as abroad.
