For many years, most computer architects have pursued one primary goal: performance. Architects have translated the ever-increasing abundance of ever-faster transistors provided by Moore's law into remarkable increases in performance. Recently, however, the bounty provided by Moore's law has been accompanied by several challenges that have arisen as devices have become smaller, including a decrease in dependability due to physical faults. In this book, we focus on the dependability challenge and the fault tolerance solutions that architects are

developing to overcome it. The two main purposes of this book are to explore the key ideas in fault-tolerant computer architecture and to present the current state-of-the-art - over approximately the past 10 years - in academia and industry.

The twenty-five original essays in this ... book constitute both a ... survey of Dante scholarship and a detailed manifesto for ... understanding of one of the world's great poets ... The essays ... confront a range of important questions: What theories, methods, and issues are unique to Dante scholarship? How are they changing? What approaches constitute the distinctive American tradition in Dante studies, and how has this body of critical understanding taken shape? Why - and how - do we read Dante in today's global, postmodern culture? From John Ahern on the first copies of the *Commedia* to Peter Hawkins and Rachel Jacoff on Dante after modernism, the essays shed ... light on Dante's texts, his world, and what teachers, scholars, poets, and other readers in a wide variety of cultures and contexts make of his ... legacy. -Back cover.

Blair Ackerman is a girl with crazy hair and a bad attitude. She's a girl who doesn't care what anyone thinks of her. She's a girl with only a duffel bag and a car named Nancy to her name, and that's okay by her. She's tough because she has to be. Nobody gets inside her head, nobody gets inside her heart. Silver is everything she's never wanted. He's a good guy, a smart guy, a guy who's never met a girl like her before. He's the kind of guy who loves history, who laughs at his own jokes, who

kisses like a sinful dream. He's the kind of guy who might just break down her walls and get inside her heart and make her feel. Too bad he's forbidden. Because when Blair's mom dies and she's sent to live with the father she's never met and a family that doesn't want her, Blair and Silver cross paths in ways they could never have imagined, and they discover that even though they know they should, they can't quite bring themselves to stay apart. Opposites really do attract.

SECOND THOUGHTS It was love at first sight for Britannia Smith when she met Professor Jake Luitingh van Thien. She even shamelessly followed him to Holland, hoping to see more of him. Britannia succeeded and to her joy, he proposed! But just when all seemed perfect, she met Madeleine de Venz. Madeleine was right for Jake, in every way, and Britannia became utterly convinced that to go ahead with their wedding might ruin Jake's life.

Cilia are microscopic finger-like cell-surface organelles possessed by a great many eukaryotic organisms, including humans, whose purposes include generating local fluid movements via rhythmic whip-like beating and environmental sensing. Despite intense research efforts since their discovery by van Leeuwenhoek in the 1670's, several key questions regarding ciliary functions, experimental manipulation and in silico imitation remain unanswered. Major justifications for cilia research lie in their involvement in various forms of human disease (ciliopathies) and their ability to instantiate decentralised, asynchronous sensorial-actuation of adjacent matter through modulation of beating characteristics. Further elucidation of these characteristics, which is a problem requiring the combined expertise of mathematicians, computer scientists, engineers and life scientists, will lead to novel biomedical therapies, creation of 'smart' actuating surfaces for microfluidics/lab-on-chip applications and a greater understanding of fluid mechanics in real-world scenarios. This lavishly-illustrated anthology presents recent advances in the fields of ciliary investigation, manipulation, emulation, mimesis and modelling from key researchers in their fields: its goal is to explain the state-of-the-art in cilia bioengineering and bio-computation in a uniquely creative, accessible manner, towards encouraging further

transdisciplinary work in the field as well as educating a broad spectrum of scientists and lay people. The volume is split into three distinct but interwoven themes: Biology: Biological preliminaries for the study of cilia; the state-of-the-art in genetic engineering of ciliated cells for biomedical purposes; reprogramming of cilia dynamics in live cells; Engineering: Creation of macro cilia robots for object sorting applications; pneumatic cilia for the optimization of fluid motion; electrostatic, magnetic and MEMS cilia for microfluidic mixing; reviews in artificial cilia fabrication, actuation and flow induction methods; Numerical and computational modelling. Analyses of thin film cilia for 'lab on chip' microfluidic mixing applications; modelling of gel-based artificial cilia towards simulating dynamic behaviors of responsive cilia layers in complex fluids across a wide range of potential applications.

Public alarm for random attacks by mentally ill people is at an all-time high. The brutal killing of Jill Dando, the TV personality, and the assault on George Harrison, the former Beatle, are among the cases which have undermined confidence in the mental health service. Community care is widely seen as a failed policy that has left too many people walking the streets, posing a risk to themselves and a threat to others. The Government has responded with a programme of change billed as the biggest reform in forty years, but will it achieve the 'safe, sound, supportive' service as promised? For Pure Madness, Jeremy Laurance travelled across the country observing the care provided to mentally ill people in Britain today. Based on interviews, visits and case histories, his book reveals a service driven by fear.

Written as a sequel to *The Agricultural Tractor 1855-1950* by R. B. Gray and *Farm Tractors 1950-1975* by Lester Larson, each chapter lists most of the new tractors introduced for that year, a summary of the specifications for the models, and information about the companies manufacturing the tractors.

(Berklee Guide). Learn jazz drums from one of the classic texts of jazz drumming, Alan Dawson. This book presents some of his seminal thoughts about drumming technique. The book also includes several articles about jazz styles and history by

DownBeat magazine editor Don DeMicheal, plus his insights about the soloing styles of jazz greats like Chick Webb, Gene Krupa, Buddy Rich, Max Roach, Art Blakey and others. This source material from two of the jazz era's most insightful champions of the drum set will teach you how to: develop your sense of time and jazz feel * master jazz rhythms and meter * play with greater independence and expressive nuance * perform essential beats * develop your soloing ability * and much more.

The story of the Versatile Tractor company, long recognized for its innovation and its product dependability. The book is well-illustrated with contemporary and archival photographs as well as selections from company catalogs. *Harlequin Comics* Polyface Incorporated Product Safety and Restricted Substances in Apparel emphasis on the overview of the restricted substances present in

fabrics, apparels and accessories and their acceptable limits or total ban, management of such restricted substances in the supply chain, standard and regulatory test methods.

Manufacturing Restricted Substances address hazardous substances potentially used and discharged into the environment during manufacturing and related processes, not just those substances that could be present in finished products. Safety requirements and review of risk of different garments have been covered including varieties of accessories. Global and country specific regulations on the restriction of various harmful chemicals used in the manufacturing process of fabrics, apparels and related accessories are also discussed in detail. The book is aimed at textile and apparel industry professionals, retailers, factory heads, buying offices and students intending to join the industry in the areas of quality assurance covering safety and chemical compliance.

Polyurethanes are one of the most dynamic groups of polymers, they find use in nearly every aspect of modern life, in applications such as furniture, bedding, seating and instrument panels for cars, shoe soles, thermoinsulation, carpet backings, packaging, adhesives, sealants, binders and as coatings. In 2004 10.6 million tons of polyurethanes were produced, in 2014 the world production

was close to 20 million tons. In the last decade (2005-2015) important, worldwide developments in the area of polyols for polyurethanes were carried out, especially for polyols from renewable resources, described in detail in this second edition of the book. The main raw materials used for the production of PU are polyols and isocyanates. The first of these is the subject of this two volume handbook. Volume 1 is dedicated to polyols for elastic PU (flexible foams, elastomers and so on). Volume 2 is dedicated to polyols for rigid PU (rigid foams, wood substitute, packaging, flotation materials and so on). The book considers the raw materials used to build the PU polymeric architecture. It covers the chemistry and technology of oligo-polyol fabrication, the characteristics of the various oligo-polyol families and the effects of the oligo-polyol structure on the properties of the resulting PU. It presents the details of oligo-polyol synthesis, and explains the chemical and physico-chemical subtleties of oligo-polyol fabrication. This book links data and information concerning the chemistry and technology of oligo-polyols for PU, providing a comprehensive overview of: Basic PU chemistry Key oligo-polyol characteristics Synthesis of the main oligo-polyol families, including: polyether polyols, filled polyether polyols, polyester polyols, polybutadiene polyols, acrylic polyols, polysiloxane polyols, aminic polyols Polyols from renewable resources Flame retardant polyols Chemical recovery of polyols Relationships between polyol structure and PU properties This book will be of interest to all specialists working with polyols for the manufacture of PU and to all researchers that would like to know more about polyol chemistry.
