Business and Society: Stakeholder Relations, Ethics and Public Policy by Lawrence/Weber/Post, has continued through several successive author teams to be the market-leader in its field. For over thirty years, *Business and Society* has been updated and reinvented in response to society's relationship to business. *Business and Society, 11e* highlights why government regulation is sometimes required as well as new models of business-community collaboration. *Business and Society, 11e* is a book with a point of view. Lawrence, Weber and Post believe that businesses have social (as well as economic) responsibilities to society; that business and government both have important roles to play in the modern economy; and that ethics and integrity are essential to personal fulfillment and to business success. The book is designed to be easily modularized; an instructor who wishes to focus on a particular portion of the material may select individual chapters or cases to be packaged in a Primis custom

product.

Nudge Theory in Action McGraw-Hill Education

This book focuses on issues related to entrepreneurship and SME management on the African continent by providing insights from different conceptual, empirical and case studies. In doing so, it focuses on context-specific challenges for conducting entrepreneurial activities or business endeavors in smaller firms in the African continent. The book responds to calls for more research about African businesses given the acknowledgement of scholars, students and policy makers around the world who realize the increasing and growing economic importance of the African continent. In addition to serving as a source book for more in-depth studies by assisting the reader in gaining increased understanding of the topics covered, complementing the different parts with reviews, the book also elaborates on issues such as political unrest, corruption, untrained personnel and environmental concerns. *Entrepreneurship and SME Management Across Africa: Context, Challenges, Cases* will be useful to academics with an interest in different entrepreneurial contexts in general, and Africa in particular, and for students interested in regional business practices, as well as for practitioners and policy makers.

The Handbook of Experimental Economic Methodology, edited by Guillaume R. Fréchette and Andrew Schotter, aims to confront and debate the issues faced by the growing field of experimental economics. For example, as experimental work attempts to test theory, it raises questions about the proper relationship between theory and experiments. As experimental results are used to inform policy, the utility of these results outside the lab is

questioned, and finally, as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience, the question of their proper place in the discipline of economics becomes less clear. This book contains papers written by some of the most accomplished scholars working at the intersection of experimental, behavioral, and theoretical economics talking about methodology. It is divided into four sections, each of which features a set of papers and a set of comments on those papers. The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued. Some of the papers are contentious---a healthy sign of a dynamic discipline---while others lay out a vision for how the authors think experimental economics should be pursued. This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics. Researchers from a broad range of fields will benefit from the exploration of these important questions.

Trade is being weaponized – and this is not good. As politicians on both sides of the Atlantic raise the stakes, trade is increasingly a tool of coercion to achieve strategic influence. This book looks at the risks for us all as trade becomes an instrument of foreign policy, and it shows how politicians could turn things around.

Today, international economic sanctions are imposed in response to virtually every serious international crisis, whether to promote regime change and democratisation, punish armed aggression, or check nuclear proliferation. But how exactly is the economic pain inflicted by sanctions supposed to translate into political gain? What are the mechanisms by which sanctions operate - or fail to operate? This is the first comparative study of this vital question. Drawing on Gramscian state theory, *Societies Under Siege* provides a novel analytical framework to study how sanctions are mediated through the domestic political economy and state-society relations of target states and filter through into political outcomes - whether those sought by the states imposing sanctions or, as frequently occurs, unintended and even highly perverse consequences. Detailed case studies of sanctions aimed at regime change in three pivotal cases - South Africa, Iraq and Myanmar - are used to explore how different types of sanctions function across time and space. These case studies draw on extensive fieldwork interviews, archival documents and leaked diplomatic cables to provide a unique insight into how undemocratic regimes targeted by sanctions survive or fall.

In the years since it first published, *Neuroeconomics: Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition, a nearly complete revision of this landmark book, will set a new standard. This new edition features five sections designed to serve as both classroom-friendly introductions to each of the major subareas in neuroeconomics, and as advanced synopses of all that has been accomplished in the last two decades in this

rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies—each written by leading experts—lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, “The Neural Mechanisms for Choice, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices. The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all chapters, making core issues in economics, psychology, and neuroscience accessible to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general. Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning, risk, inter-temporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics—www.neuroeconomics.org Full-color presentation throughout with numerous carefully selected illustrations to highlight key concepts

English is the common denominator that unites the work presented in this volume; it provides a focal point to illustrate the ways in which a political economic approach can account for a range of phenomena in diverse settings in which a "global"

language has attained a special status as (an often perceived) tool for socioeconomic mobility. The findings reveal the complex ways in which government leaders and policymakers, as well as communities and individuals in those communities, make decisions within a global economy about the languages that will be taught as subjects or used as media of instruction in schools. Whether or not the "Straight for English" policy that has become popular in various countries in southern Africa and elsewhere is a good or bad idea, in terms of improving school completion and literacy rates, English is often promoted by its advocates as a social "good" with unquestioned instrumental value; yet access to quality English medium education in low-income countries is mostly restricted to those with sufficient economic means to pay for it. As the capitalist world-economy undergoes transformations, and assuming that translation technologies continue to improve, it is likely that the roles and relative importance that English as a global language has enjoyed over the past century will change significantly. Synchronic contextual analyses of English in various countries and regions are snapshots of a moving target with fuzzy boundaries; this is even more so the case when the object of analysis is "lingua franca English," a fluid, contextually realized "practice" that may be described in situ, which is not stable and likely never will be. The degree to which English serves effectively as a lingua franca depends on who the interlocutors are, the situation, and the extent to which interlocutors' interests and goals are mutually compatible and understood.

"This book is designed for a one-semester issues-based general education economics course, and its purpose is to interest the nonbusiness, noneconomics major in what the discipline of economics can do. Students of the "issues approach" will master the basic economic theory necessary to explore a variety of real-world issues. If this is the only economics course they ever take, they will at least gain enough insight to be able to intelligently discuss the way economic theory applies to important issues in the world today"--

The Economy Studies project emerged from the worldwide movement to modernise economics education, spurred on by the global financial crisis of 2008, the climate crisis, and the COVID-19 pandemic. It envisions a wide variety of economics graduates and specialists, equipped with a broad toolkit, enabling them to collectively understand and help tackle the issues the world faces today. This is a practical guide for (re-)designing economics courses and programs. Based on a clear conceptual framework and ten flexible building blocks, this handbook offers refreshing ideas and practical suggestions to stimulate student engagement and critical thinking across a wide range of courses.

From one of America's most popular short story writers and an Academy Award nominee: the O. Henry Award-winning tale that inspired the movie *The Hunt*. A subject of mysterious rumors and superstition, the deserted Caribbean Island was shrouded in an air of peril. To Sanger Rainsford, who fell off a yacht and washed up on its shores, the abandoned isle was a welcome paradise. But unknown to the big-game hunter, a predator lurked in its lush jungles—one more dangerous than any he had ever encountered: a human. First published in 1924, this suspenseful tale "has inspired serial killers, films and stirred controversy in schools. A century on, the story continues to thrill" (The Telegraph). "[A]

tense, relentless story of man-against-man adventure, in which the hunter Sanger Rainsford learns, at the hands of General Zaroff, what it means to be hunted." —Criterion

This volume embodies a problem-driven and theoretically informed approach to bridging frontier research in urban economics and urban/regional planning. The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship. Although economists were among the early contributors to the literature on urban planning, many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions, equity over efficiency, and normative prescriptions over positive analysis. Planners, meanwhile, even as they draw upon economic principles, often view the work of economists as abstract, not sensitive to institutional contexts, and communicated in a formal language spoken by few with decision making authority. Not surprisingly, papers in the leading economic journals rarely cite clearly pertinent papers in planning journals, and vice versa. Despite the historical divergence in perspectives and methods, urban economics and urban planning share an intense interest in many topic areas: the nature of cities, the prosperity of urban economies, the efficient provision of urban services, efficient systems of transportation, and the proper allocation of land between urban and environmental uses. In bridging this gap, the book highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics.

Non-market valuation is becoming increasingly accepted as an evaluative tool of economics related to environmental and resource protection. Freeman (economics, Bowdoin College) presents an overview of the literature, introducing the principal methods and techniques of resource valuation. Chapters cover the measurement of welfare changes, revealed and stated preference models, nonuse models, aggregation of values across time, environmental quality as factor input, longevity and health valuation, property value models, hedonic wage models, and recreational uses of natural resource systems.
