A Social View of Organ Transplants and Dialysis

Outskirts Press

This comprehensive, peer-reviewed resource sets the standard for nephrology nursing clinical practice. Written by experts in the field, the 2020 edition presents the newest information regarding kidney disease, its treatment, and the nursing care involved. New and updated content reflects current policy and terminology, including health information technology, collaboration with ESRD Networks, economics of ESRD reimbursement, nutritional needs of patients undergoing bariatric surgery, nutritional needs of pregnant patients, advance care planning, palliative care, and end-of-life care. The seventh edition contains almost 1,800 pages divided into two volumes, includes self-assessment questions, and provides more than 60 nursing continuing professional development contact hours and almost 12 pharmacology hours.

Book initiates with

introductory material to hemodialysis technology and its historical evolution and later on divulging into the field of biomaterials. With this background, the book discusses selection criteria of a suitable biomaterial for synthesis of haemodialysis membranes along with illustration of a complete indigenous, low cost technology for spinning of haemodialysis fibres. Well illustrated description of instruments used for membrane characterization and biomedical engineering is also provided at suitable junctures to effectively present the concept including worked out examples. Present title can be a good textbook as well as a research material for membrane as well as biomedical engineering curricula and provides coverage for appropriate undergraduate and graduate students interested in hemodialysis membranes.

Help, I Need Dialysis! Mometrix Media Llc
Kidney disease and cancer are frequent comorbidities that require specialized knowledge and expertise from both the nephrologist and the oncologist. Written by three pioneers in this

growing subspecialty, Onco-Nephrology provides authoritative, definitive coverage of the mechanism and management of these two life-threatening diseases. This unique, single-volume resource covers current protocols and recommends management therapies to arrest kidney failure and allow oncologic treatments to continue and succeed. Addresses acute and chronic kidney diseases that develop from a variety of cancers. This includes direct kidney injury from the malignancy, paraneoplastic effects of the cancer, and various cancer agents used to treat the malignancy. Discusses key issues regarding kidney disease in patients with cancer, including conventional chemotherapeutic regimens and new novel therapies (targeted agents and immunotherapies) or the malignancies themselves that may promote kidney injury; patients with chronic kidney disease who acquire cancer unrelated to renal failure; and kidney transplantation, which has been shown to carry an increased risk of cancer. Contains dedicated

chapters for each class of the conventional chemotherapeutic agents, targeted cancer agents, and cancer immunotherapies including the basic science, pathogenic mechanisms of injury, clinical manifestations, and treatment. Includes special chapters devoted to the individual classes of chemotherapies that relate to kidney disease for quick reference. Discusses increasingly complex problems due to more numerous and specialized anti-cancer drugs, as well as increased survival rates for both cancer and renal failure requiring long-term patient care. Covers anti-VEGF (antivascular endothelial growth factor) agents and cancer immunotherapies – treatments that are being recognized for adverse kidney effects. Utilizes a clear, logical format based on the ASN Core Curriculum for Onco-Nephrology, making this reference an excellent tool for board review, as well as a practical resource in daily practice. **Hemodialysis Membranes** Cambridge University Press This volume, written by well-known experts in the field, covers all aspects of

Anti-Neutrophil Cytoplasmic Antibody (ANCA) Associated Vasculitis (AAV). The expression refers to a group of diseases, characterized by destruction and inflammation of small vessels. The clinical signs vary and affect several organs, such as the kidney, lung, skin, nervous system and others. The opening chapters give some historical hints, explain the genetic basis of the disease and provide insights into the pathogenesis derived from recent experimental studies and guides the reader through classification and nomenclature. A large part of the book is then devoted to a detailed description of the specific related diseases and their clinical presentations, the disease course, and potential complications. The advice regarding treatment is based on the best currently available evidence in this constantly evolving area. The book is part of Springer's series Rare Diseases of the Immune System, which presents recently acquired knowledge on pathogenesis, diagnosis, and therapy with the aim

of promoting a more holistic approach to these conditions. AAVs are systemic autoimmune diseases of unknown cause that affect small (to medium) sized blood vessels. They include granulomatosis with polyangiitis (formerly Wegener's granulomatosis), microscopic polyangiitis, and eosinophilic granulomatosis with polyangiitis (formerly Churg–Strauss syndrome). This volume will be an invaluable source of up-to-date information for all practitioners involved in the care of patients with these diseases.

Handbook of Nutrition and the Kidney Lippincott Williams & Wilkins

The podocyte is a key cell that forms the last barrier of the kidney filtration unit. One of the most exciting developments in the field of nephrology in the last decade has been the elucidation of its biology and its role in the pathophysiology of inherited and acquired glomerular disease, termed podocytopathy. In this publication, world-renowned experts summarize the most recent findings and advances in the field: they describe the unique biological features and

injury mechanisms of the podocyte, novel techniques used in their study, and diagnosis and potential therapeutic approaches to glomerular diseases. Due to its broad scope, this publication is of great value not only for clinical nephrologists and researchers, but also for students, residents, fellows, and postdocs. *Chronic Kidney Disease, Dialysis, and Transplantation E-Book* Lippincott Williams & Wilkins

This book provides a comprehensive, state-of-the-art overview of interventional nephrology. Similar to the previous edition, this text describes a direct approach to clinical problems encountered by the community of care providers who treat chronic kidney disease and dialysis patients. Practical scenarios faced on a day-to-day basis are presented by experts in the field, utilizing the latest scientific information. The book also features updated therapeutic guidelines and fully revised and new chapters. Written by the foremost authorities in the field, *Interventional Nephrology: Principles and Practice, Second Edition* is a must-have

resource for clinicians and practitioners who treat and manage patients with hemodialysis and peritoneal dialysis access problems.

Springer Science & Business Media Contains expanded content on economics and outcomes of treatment, as well as acute kidney injury. Covers hot topics such as the genetic causes of chronic kidney disease, ethical challenges and palliative care, and home hemodialysis. Discusses the latest advances in hypertensive kidney disease, vitamin D deficiency, diabetes management, transplantation, and more. Provides a clear visual understanding of complex information with high-quality line drawings, photographs, and diagnostic and treatment algorithms.

A Companion to Brenner and Rector's The Kidney Elsevier Health Sciences Edited by Philip Varughese CHT and Jim Curtis CHT, this manual has been developed to assist technicians in preparation for certification examinations. The Third Edition, contains many new chapters. Chapters include basic dialysis

theory, the patient, membrane technology, dialyzers, dialysis procedure, heparin therapy, renal nutrition, water treatment, dialyzer reuse, medications, safety, machine functions, computers in dialysis, required basic knowledge, DOQI guidelines, peritoneal dialysis, transplantation and proper monitoring & disinfection of dialysis delivery system.

Technicians will find the outline format an asset to learning.

A Must Have Beginners Guide for Anyone Entering the Hemodialysis Technician Profession Createspace Independent Publishing Platform Thoroughly revised and updated for its Sixth Edition, this handbook is a practical, easily accessible guide to nutritional management of patients with acute and chronic renal diseases. Leading international experts present state-of-the-art information on these patients' nutritional requirements and offer dietary recommendations, with menus and lists of supplements to enhance patient compliance. Numerous tables and figures enable readers to find essential information quickly. This edition

includes new chapters on the dietary approach to treating patients with kidney stones and hypertension, as well as on obesity and physical activity as they relate to patients with kidney disease.

Anti-Neutrophil Cytoplasmic Antibody (ANCA) Associated Vasculitis UNESCO

Module 6 was designed and written for Advance Practice Registered Nurses (APRNs) under the guidance of the module's editors, Katherine Houle and Kim Alleman. Its topics are meant for the APRN new to nephrology practice as well as for those with experience. The module is divided into 5 chapters. The first addresses professional issues related to the APRN and end-of-life issues. In the next chapter, chronic kidney disease stages 1 through 5 are presented. Chapter 3 offers an overview of treatment options for kidney replacement therapy. It includes transplant, hemodialysis, the vascular access, peritoneal dialysis, and home dialysis. The next chapter turns to acute kidney injury (AKI) and presents useful information pertaining to AKI, its causes and treatments.

Chapter 5 discusses care of the pediatric patient by the APRN. Additional information on almost all of these topics can be found in the other modules of the Core Curriculum for Nephrology Nursing. The APRN will find this information useful as well.

"For a reader interested in the contemporary history of medicine, we can recommend no book more highly than *The Courage to Fail*. It is beautifully and clearly written; it is fascinating in its treatment of the history of one of the most publicized of the new medical technologies-organ transplant and renal dialysis." -*Journal of History and Medicine* "This book is a 'must' for every young physician and surgeon who is involved with the trial of the new procedures in the environment of the modern teaching hospital." -*New England Journal of Medicine* The title of this profound work conveys the bold, uncertain, and often dangerous adventure in which medical professionals and their organ transplant and

dialysis patients are engaged. Built around a series of case studies, *The Courage to Fail* is the product of collaborative first-hand research concerned with various social phenomena generated by transplantation and dialysis. The authors examine the individuals involved and the workings and atmosphere of some of the medical centers in which these forms of therapy have been developed. They examine "gift-exchange" dimensions of transplantation: the transcendent and tyrannical aspects of the "gift of life" that transplants entail for donors and recipients-and for medical professionals as well. They also analyze the dilemma of uncertainty inherent in medicine, which occurs with particular force in the development of such experimental techniques. Since publication of the original edition, the authors have continued to follow social and medical developments surrounding organ transplants and dialysis. In their new introduction, they discuss transplantation as a gift of life, how and when death occurs, efforts to procure

more organs, and organ replacement and issues of equity. This book will be of interest to physicians, medical students, medical sociologists, and anyone interested in the history of and issues surrounding organ transplantation and dialysis. Rene Fox is professor of sociology in the departments of Sociology, Psychiatry, and Medicine, and is the Annenberg Professor of the Social Sciences, at the University of Pennsylvania. Judith P. Swazey is professor in the Department of Socio-Medical Sciences and Community Medicine at the Boston University School of Medicine. **Pocket Format** Elsevier Health Sciences The revised, updated Fourth Edition of this popular handbook provides practical, accessible information on all aspects of dialysis, with emphasis on day-to-day management of patients. Chapters provide complete coverage of hemodialysis, peritoneal dialysis, special problems in dialysis patients, and problems pertaining to various organ systems. This edition reflects the latest guidelines of the National Kidney Foundation's Kidney Disease Outcomes Quality

Initiative (KDOQI) on hemodialysis and peritoneal dialysis adequacy and on nutrition. New chapters cover chronic kidney disease management in predialysis patients, frequent daily or nocturnal hemodialysis, and hemodiafiltration. Chapters on venous and arteriovenous access have been completely revised. Each chapter provides references to relevant Web sites. *Dialysis Therapy* Transaction Pub Acute is described on MedicineNet.com as an illness with an abrupt onset that is often of short duration, rapidly progressive, and in need of urgent care. Once the symptoms appear, they can change or worsen swiftly. Synonyms of acute include severe, critical, drastic, dire, dreadful, terrible, awful, grave, bad, serious, desperate, and dangerous. The nurses who work with patients with acute kidney injury (AKI) know these descriptions are accurate. They also know that there is enough information to warrant a separate module devoted to AKI. The work of Helen Williams, who served as the module's editor, is

greatly appreciated. This module offers information on managing an acute care program, causes of AKI, and the nutritional needs of the patient. Hemodialysis, water treatment, peritoneal dialysis, continuous renal replacement therapy (CRRT), slow low-efficiency daily dialysis (SLEDD), and therapeutic apheresis are all topics addressed in this module. There is also a new chapter that nurses in the chronic setting will find useful; it addresses the patient who has a ventricular assist device (VAD). More patients with VADs are requiring dialysis, yet there has been little published on this subject.
