The *Wildland Fire Incident Management Field Guide* is a revision of what used to be called the *Fireline Handbook*, PMS 410-1. This

guide has been renamed because, over time, the original purpose of the *Fireline Handbook* had been replaced by the *Incident Response Pocket Guide*, PMS 461. As a result, this new guide is aimed at a different audience, and it was felt a new name was in order.

On a mountain somewhere above treeline, in some of the coldest and worst winter conditions imaginable, two men lie unconscious in the snow as explosive winds batter the nearby summits. In *The Last Traverse: Tragedy and Resilience in the Winter Whites*, Ty Gagne masterfully lays out the events that led up to an epic and legendary rescue attempt in severe and dangerous winter conditions in the White Mountains of New Hampshire. More than a cautionary tale, it is a tribute to all the volunteers and professionals who willingly put themselves in harm's way to save lives. This is a must read for anyone who hikes the Whites. "In his first book, *Where You'll Find Me: Risk, Decisions, and the last Climb of Kate Matrosova*, Ty Gagne established his credentials as a writer of well-researched and objective analysis of mountain accidents. Moreover, *Where You'll Find Me* reads like a novel, a book I couldn't put down. In his latest book, *The Last Traverse*, Gagne takes the combination of analysis and storytelling to a new level in a tale of survival and tragedy in the White Mountains." - Mark Synnott, author of *The Impossible Climb: Alex Honnold, El Capitan, and the Climbing Life* and *The Third Pole: Mystery, Obsession, and Death on Mount Everest*

The Complete First Aid Pocket Guide Cambridge University Press
By 1979, we knew all that we know now about the science of climate change - what was happening, why it was happening, and how to stop it. Over the next ten years, we had the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich's groundbreaking account of that failure - and how tantalizingly close we came to signing binding treaties that would have saved us all before the fossil fuels industry and politicians committed to

anti-scientific denialism - is already a journalistic blockbuster, a full issue of the New York Times Magazine that has earned favorable comparisons to Rachel Carson's *Silent Spring* and John Hersey's *Hiroshima*. Rich has become an instant, in-demand expert and speaker. A major movie deal is already in place. It is the story, perhaps, that can shift the conversation. In the book *Losing Earth*, Rich is able to provide more of the context for what did - and didn't - happen in the 1980s and, more important, is able to carry the story fully into the present day and wrestle with what those past failures mean for us in 2019. It is not just an agonizing revelation of historical missed opportunities, but a clear-eyed and eloquent assessment of how we got to now, and what we can and must do before it's truly too late.

Many of us have concerns about the effects of climate change on Earth, but we often overlook the essential issue of human health. This book addresses that oversight and enlightens readers about the most important aspect of one of the greatest challenges of our time. The global environment is under massive stress from centuries of human industrialization. The projections regarding climate change for the next century and beyond are grim. The impact this will have on human health is tremendous, and we are only just now discovering what the long-term outcomes may be. By weighing in from a physician's perspective, Jay Lemery and Paul Auerbach clarify the science, dispel the myths, and help readers understand the threats of climate change to human health. No better argument exists for persuading people to care about climate change than a close look at its impacts on our physical and emotional well-being. The need has never been greater for a grounded, informative, and accessible discussion about this topic. In this groundbreaking book, the authors not only sound the alarm but address the health issues likely to arise in the coming years.

Traditional Skills of the Mountain Men Jones & Bartlett Learning
This is the first major textbook on the emerging speciality of remote medicine. The modern concept emerged in the 1970s when the medical directors of the main oil companies operating in the North Sea — BP, Shell and Mobil — sought advice from the University sector since the morbidity and mortality levels of offshore workers had become unacceptable. A system of healthcare was jointly developed and applied by the industrial doctors and the academic doctors of Aberdeen University which worked well and greatly improved the healthcare of the offshore personnel. It was subsequently validated by duplication for the

very different scientific population of the British Antarctic Survey where it worked even better. It was next introduced to the oilfields of the Middle East — Qatar (QGPC, Offshore and Onshore), Abu Dhabi (ADMA and ADCO) and Oman (PDO) where it worked equally well. The Aberdeen Universities next collaborated with the UAE University in Abu Dhabi to evaluate and develop telemedicine mainly in the area of education and research and they established early transcontinental courses and conferences together with joint supervision and production of higher degrees between collaborating universities in different parts of the world. The recently established International Remote Healthcare Association (IRHCA), backed by the University of Glasgow, the UAE University in Abu Dhabi and the Siberian State Medical University has established an ongoing study to determine the education and skills required to produce a competent Remote Healthcare Practitioner. The chapters in this book contain the knowledge base currently thought by the IRHCA to be necessary to produce a competent remote healthcare practitioners and thus to allow curricular development of the new courses necessary for the establishment of University qualifications and for the regulating authorities to design examinations and establish appropriate registration. Since this is a new speciality the continuing research of the IRHCA is necessary to act as an audit to ensure that the information in the book, and the courses derived from it remain relevant and also to detect omissions as they are recognised.
