 Popular Science Keith Martin

The purpose of this book is to examine the experience of a number of countries in grappling with the problems of reconciling the two fields of competition policy and intellectual property rights. The first part of the book indicates the variation in legislative models as well as the wide variety of judicial and administrative doctrines that have been used. The jurisdictions selected for study are the three major trading blocks with the longest experience of case law (the EU, the USA and Japan) and

three less populous countries with open economies (Australia, Ireland and Singapore). In the second part of the book we look at a number of issues closely related to the interface between competition law and intellectual property rights. Separate chapters analyse the issue of parallel trading and exhaustion of IPRs, the issue of technology transfer, and the economics of the interface between intellectual property and competition law.

American Cars from 1968 to 1975 Cambridge University Press

A practical guide to patent prosecution and strategy in the US with particular reference to invention in chemicals and biotechnology. The presentation is focused on case law in the US and deals with specific cases. A section is devoted to international patent protection.

The Interface Between Intellectual Property Rights and Competition Policy Law Journal Press

Lawyers and corporations have a vital interest in the regulation and protection of industrial property--patents, designs, trademarks, trade names, and repression of unfair competition--and in the problems raised by agreements between enterprises, nationally and internationally. Since World War II, there has been increasing ferment for changes in the whole system of industrial property. Pressures have been building up from administrations concerned with the functioning of the patent and trademark system; from private enterprises affected by delays, costs, and insecurities of the system; from developing countries anxious to receive and adapt foreign technology at reasonable cost and without excessive restriction; and from the increasing tendency

of antitrust law to curb even legal monopolies in order to ensure free competition. This major work describes the national and international regime of patents, trademarks, technological know-how, and related rights of industrial property; the conflicting interests and demands for recognition and satisfaction in this field; the international efforts and arrangements achieved for harmonization of law and procedure; the problems involved in the transfer of technology for the technical and economic development of countries pressing for assistance; and the controls established by statutory and decisional law against restriction of competition by the exercise of industrial property rights.
