National Geographic Society
 The computer and particularly the Internet have been
 represented as enabling technologies, turning consumers into
 users and users into producers. The unfolding online cultural
 production by users has been framed enthusiastically as
 participatory culture. But while many studies of user activities
 and the use of the Internet tend to romanticize emerging media
 practices, this book steps beyond the usual framework and
 analyzes user participation in the context of accompanying
 popular and scholarly discourse, as well as the material aspects
 of design, and their relation to the practices of design and
 appropriation.

Check out the author's website at www.scientific-presentations.com This book looks at the presenting scientist from a novel angle: the presenter-host. When scientists give a talk, the audience ("guests") expects the title of the talk to determine presentation content, they require

understandable slides, and they demand visible and audible scientific authority. To each expectation corresponds a set of skills: personal (voice, host qualities, time control), technical (presentation tools and slide design), and scientific (Q&A, slide content). The author takes an original human factor view of the presentation delivery, in which the audience is easily distracted, rapidly forgetful, and increasingly impatient. Thus, insightful pointers are given on how to deliver the talk, how to craft the slides, and how to prevent the computer from rendering the presenting host-scientist into a "ghost". In addition, the book goes in-depth over the treatment of questions by examining the motives and style of the questioners, and advising on how best to answer to each type of questioner. The book comes with a DVD for audio and video examples, and includes essential PowerPoint and Keynote techniques that a presenter cannot live without.

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.
