The severity of interconnected socio-economic and environmental impacts on landscapes and people across Africa are exacerbated as a result of land degradation, conflict, poor governance, competition for land and inequality, and exacerbated by climate change. In pursuing pathways towards a more resilient future, collaborative and multi-stakeholder governance and management of landscapes have been promoted by government agencies, NGOs and conservation organisations as a possible solution. However, there is no single way to achieve effective collaboration, and different landscape projects have experimented with different entry points and engagement processes. Grounded in partnerships amongst researchers, practitioners and development partners with expertise in landscape governance and management in Africa, this book describes and collates key lessons from practice for supporting more resilient and equitable landscapes.

The book, presenting the proceedings of the 2018 Future Technologies Conference (FTC 2018), is a remarkable collection of chapters covering a wide range of topics, including, but not limited to computing, electronics, artificial intelligence, robotics, security and communications and their real-world applications. This book provides evidence on the relevance of environmental and social factors in decision making. It discusses the Gold Standard Frameworks for integrating extra-financial risks into the philosophy, culture, strategies, products and value chain management procedures of investment and banking and highlights the current emergence of global administrative law. New emerging

topics like positive impact investing and finance, climate friendly markets, human rights, the enhanced role of fiduciary duties and shared values are approached with a lot of examples for practical application. Steps towards a new banking culture, a new climate for double loop learning and sustainable financial innovation are outlined and the additional benefits of robust stakeholder engagement explained. The anthology paves the way from robust impact and risk management to positive impact creation and a new investment culture. As well, challenges for the implementation and ways to overcome them are broadly discussed. The book is rooted in the fact that institutions and investors which fail to professionally integrate the management of extra-financial risk into their whole lending and investment chain and fail to move to positive impact creation may well lose positions and mandates and finally the trust of their clients, partners and stakeholders. The contributing authors of this anthology are internationally renowned experts in the field of ESG and impact investing. The compendium brings together practitioners and academics to allow a confluence of thoughts, concepts and viewpoints. This huge variety of perspectives and approaches makes this volume a comprehensive compendium on responsible investment and banking.

Talent Management in Healthcare offers readers a substantial guide and provides a sustainable talent strategy for organisations within the healthcare industry. The introduction is free to download here. This book is about empowering ordinary people to make a difference in the world. It explores the transformation that emerges when groups spread around the world working on similar issues discover synchronicities, often cross-pollinating, and collaborate rather than compete. A Collaboratory is a facilitated space where stakeholders meet to discuss burning societal issues. Each collaboratory is different and needs to be carefully designed to fit the context, ambition, purpose, stakeholders, culture, and space. Part 1 of the book sets the stage by explaining what a collaboratory is, where it emerges from, how it is defined and how it fits into the larger context of the social lab revolution that is happening all over the world. Part 2 of the book unpacks the many dimensions and considerations that contribute to the magic of a collaboratory experience. We offer nine unique insights and perspectives that need to be considered and form an integral part of a successful collaboratory. Part 3 offers eight inspiring examples of how a collaboratory could be applied. We look at applications in the educational field, within organizations, among institutions, and as movements. Part 4 offers a pragmatic outlook on how to get started if you want to use the Collaboratory in your own field of work. The book offers a narrative roadmap using a real-life example of a co-designed and co-created Collaboratory in Norway. Offering practical recommendations and benefits, and bringing together insights from a range of experienced academics, practitioners and facilitators, The Collaboratory is a handbook for experienced or aspiring practitioners in all fields of change: in society, in organizations of all kind and in the field of

education.

**A Co-creative Stakeholder Engagement Process for Solving Complex Problems** Routledge  
As resource users interact and impose externalities onto each other, institutions are needed to coordinate resource use, create trust, and provide incentives for sustainable management. Coordinated collective action can play a key role in enabling communities to manage natural resources more sustainably. But when such collective action is not present, what can be done to foster it? There is growing awareness that the governance of natural resources has to be adapted to the specific context. Interventions are often implemented at small scale, and the potential to scale up facilitation intensive approaches is limited. Moreover, sustainable resource management frequently fails to emerge or breaks down after the project ends. To date, researchers have typically used behavioral games to study cooperation patterns of communities. Recently, games have been adapted as learning and stakeholder engagement tools to improve management of the commons, strengthen self-regulation of resource use, and enhance constructive interactions among resource users. Combining games with other interventions and tools and facilitated discussions has been proposed as a promising approach to improve collective action institutions through experiential learning — a classic approach in education. This paper reviews existing literature and synthesizes lessons learned from a series of studies testing the use of behavioral games for institutional capacity development in India. We conclude that, while games alone will not be the solution to all natural resource management challenges games can provide a structured and therefore replicable approach for influencing behavior. They can also improve system understanding, raise awareness, influence norms, facilitate dialogue, train for crisis response, and increase legitimacy of decisions.

Most project managers would agree that every project is unique. But not all project managers would agree that the best way to manage a unique project is unique. Many still cling to the old practice of having a methodology that is applied to all projects. "One size fits all" is still in common use, and this approach has proven to lead to project failure. Flexibility, situational intelligence, and creativity

are essential to deliver project success. The need to recognize and master ever-changing requirements and environmental conditions is a tough challenge for professional project managers. The same practices that led to success yesterday may cause failure today. Selecting favorable responses to a given situation is often the most critical factor of the dynamics of success and failure. This book is designed to help project professionals assess a situation, predict the appropriate approach, methodology and achieving styles, and then apply them in a situational fashion. To guide project managers in selecting the appropriate responses, Situational Project Management (SitPM) shows how to assess a given project, determine its unique characteristics, and select the appropriate methods to complete the project. With this book, projects managers can use SitPM to develop profiles of their projects on the basis of the projects' physical characteristics, the project teams' behavioral characteristics, the enterprise environment, and the market environments receiving project deliverables. These profiles help project managers to determine the appropriate project life cycle approach and leadership style. The book also explores various ways to engage stakeholders on the basis of a project's SitPM profile. The book's author, Oliver F. Lehmann, has developed a set of templates to apply SitPM in practice. It can be downloaded from [www.oliverlehmann.com/SitPM/Templates.zip](http://www.oliverlehmann.com/SitPM/Templates.zip).

The main objective of this book is to provide an innovative set of concepts and tools regarding company management, internal and external stakeholders and social responsibilities, reflecting the necessities and opportunities generated by the digital transformation, the transition to a knowledge-based economy, and the COVID-19 crisis. The book, based on a holistic vision and contextual approach of business, contributes to the development of company management and stakeholder and social responsibility theories and practices, being structured in 12 chapters. The original company management vision, approaches, and tools are based on three pillars: a new "manager-relevant stakeholder" rather than "manager-subordinate" managerial paradigm; a new type of company social responsibility rather than corporate social responsibility; and a new concept of company-relevant stakeholder rather than that of salient stakeholders. The book contains two innovative managerial mechanisms: the managerial synapse and company-relevant stakeholders-based management system able to help companies and stakeholders face successfully the challenges of digital transformation and the COVID-19 crisis and to generate greater organization functionality and performance. The book will be of interest to company managers and management specialists, management academics, consultants and researchers, and MBA students interested in a style of management with social responsibility at the forefront.

*The Influence Agenda* CRC Press

The global economy is currently at an unprecedented juncture. Within the development context, the year 2020 ushered in the Decade of Action for achieving the 2030 Sustainable Development Agenda. The world has embarked on this ambitious declaration while combatting the perils and far-reaching implications of the Covid-19 global pandemic, which threatens progress across all 17 of the United Nations' (UN) Sustainable Development Goals (SDGs), whilst simultaneously placing greater urgency upon their realization. Furthermore, the pandemic has underscored the disproportionate distribution of inequities and vulnerabilities where the poorest and the most vulnerable populations, and the least developed, in-crisis and land-locked developing nations have been affected the most. Fragilities and constraints of resources – both monetary and non-monetary – have in turn highlighted the indisputable role of development cooperation for collective action. To attain this collective action, a process of creating, interpreting, and negotiating meaning to sustainable development is not merely necessary but imperative.

A critical appraisal of why environmental policies fail and succeed, Environmental Policymaking and Stakeholder Collaboration provides policy makers with the keys to navigating complicated environmental issues and stakeholder negotiations. It covers theories in environmental policy making and stakeholder management, compares and contrasts failed and successful process and policy, and includes practical guidelines and tools for the practitioner. More than just a theoretical examination, the book presents an extensive tool kit of more than 70 practical and applied ideas to guide the implementation of inclusive stakeholder collaboration. These ideas can be used by governments and organizations to improve decision making and ensure that stakeholders and the general public have a say in public policy. The book covers theories of stakeholder collaboration, building an understanding of why stakeholder collaboration is simultaneously critical for effective policy making and why it is so challenging. While the focus of this book is on environmental policymaking, the theories and tools can be applied to any issue. Government cannot be expected to solve our public problems in isolation: we must ensure that diverse interests are heard and represented in the policymaking process. This book is more than just a theoretical treatise about stakeholder collaboration; it is also a collection of applied and practical tools to ensure that collaboration is put into practice in ways that are effective and meaningful. It helps people with a passion for the environment understand how to get their voices heard and helps governments understand how to listen.
