This monograph is a review of the present state of knowledge of the relationships and consequences of over 25 centuries of interactions between the Amerindian and Asean Circum-Pacific regions. A fascinating, special case of previous work by two Asianists on similar themes of the Euro-Asian Continental land mass, providing the theoretical framework within which the complexities of cultural cross-pattern are studied. The subjects discussed individually begin with the elements of recording and writing, continuing through

the arts, religion, folklore and an eventual examination of the natural sciences and technology. There is also a discussion in this context of evidence from and the relevance of ethno-botany, ethno-zoology and ethno-helminthology. The underlying thesis of this volume is the relative independence and powerfully original development and evolution of Amerindian cultures and societies in Central and South America.

"Zapotec is one of the major hieroglyphic writing systems of ancient Mesoamerica. This volume explains the origins and

spread of Zapotec writing, the role of Zapotec writing in the changing political agendas of the region, and the decline of hieroglyphic writing in the Valley of Oaxaca."--Provided by publisher"--

Cosmology, Calendars, and Horizon-Based Astronomy in Ancient Mesoamerica is an interdisciplinary tour de force that establishes the critical role astronomy played in the religious and civic lives of the ancient peoples of Mesoamerica. Providing extraordinary examples of how Precolumbian peoples merged ideas about the cosmos with those concerning calendar and astronomy, the volume showcases the value of detailed examinations of astronomical data for understanding ancient cultures. The volume is divided into three sections:

investigations into Mesoamerican horizon-based astronomy, the cosmological principles expressed in Mesoamerican religious imagery and rituals related to astronomy, and the aspects of Mesoamerican calendars related to archaeoastronomy. It also provides cutting-edge research on diverse topics such as records of calendar and horizon-based astronomical observation (like the Dresden and Borgia codices), iconography of burial assemblages, architectural alignment studies, urban planning, and counting or measuring devices.

Contributors—who are among the most respected in their fields—explore new dimensions in Mesoamerican timekeeping and skywatching in the Olmec, Maya, Teotihuacano, Zapotec, and Aztec cultures. It will be of great interest to students and scholars of anthropology, archaeology, art history, and astronomy. *Skywatchers of Ancient Mexico* Trans-Pacific Echoes and Resonances Listening Once Again

This book examines the recent phenomenon in Latin America of national Truth and Reconciliation commissions. Few studies have examined the role of Churches or religion in political processes that proclaim valued theological terms as their agenda - truth, forgiveness, and reconciliation. This book questions the role of religion, specifically of established Churches. The impact of such reconciliation commissions on Indigenous Native Americans is also examined, as is the role of women and how both commissions and Churches or religions were challenged by their experiences. The contributors offer differing perspectives on one or more national truth and reconciliation processes and thus offer a collection that serves as valuable source for the disciplines of Religious Studies, Ethics, Theology, Political Science, Social Sciences and Women's Studies.

The Mystery of the Mayan Hieroglyphs World Scientific

Combining as it does the romance of space with the mystery of the past, the study of pre-Columbian skywatchers of the New World has drawn increasing scientific and popular attention in recent years. Aveni, one of the pioneers in this new interdisciplinary field, couples basic astronomy with archaeological and ethnological data to present a readable and entertaining synthesis of what is known of ancient astronomy in this hemisphere.

David Carrasco draws from the

perspectives of the history of religions, anthropology, and urban ecology to explore the nature of the complex symbolic form of Quetzalcoatl in the organization, legitimation, and subversion of a large segment of the Mexican urban tradition. His new Preface addresses this tradition in the light of the Columbian quincentennial. "This book, rich in ideas, constituting a novel approach . . . represents a stimulating and provocative contribution to Mesoamerican studies. . . . Recommended to all serious students of the New World's most advanced indigenous civilization."—H. B. Nicholson, *Man*

Health, Tourism and Hospitality: Spas, Wellness and Medical Travel, 2nd Edition takes an in-depth and comprehensive look at the growing health, wellness and medical tourism sectors in a global context. The book analyses the history and development of the industries, the way in which they are managed and organised, the expanding range of new and innovative products and trends, and the marketing of destinations, products and services. The only book to offer a complete overview and introduction to health, tourism and hospitality this 2nd Edition has been updated to include: • Expanded coverage to the hospitality sector with a particular focus on spa management. • New content on medical tourism throughout the book, to reflect the worldwide growth in medical travel with more and more countries entering this competitive market. • Updated content to reflect recent issues and trends including: ageing population, governments encouraging preventative health, consumer use of contemporary and alternative therapies, self-help market, impacts of economic recession, spa management and customer loyalty. • New case studies taken from a range of different countries and contexts, and focusing on established or new destinations, products and services such as: conventional medicine, complementary and alternative therapies, lifestyle-based wellness, beauty and cosmetics, healthy nutrition, longevity and anti (or active)-ageing, amongst others. Written in a user friendly style, this is essential reading for students studying health, tourism and hospitality.

The Second Edition of *Religions of Mesoamerica* comes at a turning point in the study of the Americas and the religious and cultural histories of the New

World. To that end, esteemed scholar David Carrasco integrates past and current research, developments, and excavations to vividly synthesize the history of Mesoamerican cultures—their religious forms, ceremonial centers, complex social structures, view of time and space, myths, and rituals. Carrasco's deep yet concise overview takes readers on an absorbing journey where they experience the dynamics and complexities of Aztec and Maya cultures, the Spanish conquest, and cultural combinations of European and indigenous ideas and practices. He skillfully demonstrates how the religious imagination was and continues to be crucial to the survival and creativity of Mesoamerica and its Chicano/a descendants.

Completely revised and updated, this new edition provides a readable, beautifully illustrated journey through world cultures and the vibrant array of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the Four Corners region of North America, Dr. Penprase has included accounts of Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular "Archaeoastronomy of Skyscrapers" section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China. With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. The *Power of Stars* puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

University Foundation for Ancient Research & Skywatchers of Ancient Mexico helped establish the field of archaeoastronomy, and it remains the standard introduction to this subject. Combining basic astronomy with archaeological and ethnological data, it presented a readable and entertaining synthesis of all that was known of ancient astronomy in the western hemisphere as of 1980. In this revised edition, Anthony Aveni draws on his own and others' discoveries of the past twenty years to bring the Skywatchers story up to the present. He offers new data and interpretations in many areas, including: The study of Mesoamerican time and calendrical systems and their unprecedented continuity in contemporary Mesoamerican culture The connections between Precolumbian religion, astrology, and scientific, quantitative astronomy The relationship between Highland Mexico and the world of the Maya and the state of Pan-American scientific practices The use of personal computer software for computing astronomical data With this updated information, Skywatchers will serve a new generation of general and scholarly readers and will be useful in courses on archaeoastronomy, astronomy, history of astronomy, history of science, anthropology, archaeology, and world religions.

Space and Place University of Texas Press Connecting the massive landscapes of North and South America are Mexico and Central America. An area of fascination and study for geographers and scholars from around the world, for millennia these lands and people have played important roles in the discoveries and distributions of civilizations, resources, and nations. These regions have stimulated a large amount of research and publications across the sub-disciplines of geography. The *Geography of Central America and Mexico: A Scholarly Guide and Bibliography* by Thomas A. Rumney collects, organizes, and presents as many of these publications as possible to encourage efforts in the teaching, study, and continuing scholarship of the geography of this area, which includes Mexico, Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama. Beginning with the region as a whole, each chapter that follows one per nation is divided by the specific sub-disciplines of geography: cultural, social, economic, historical, physical and environmental, political, and urban. Each section is further divided by document type: atlases, books, book chapters, articles from scholarly journals, master s theses, and doctoral dissertations.

Although the majority of entries recorded focus on English-language works, selected entries written in Spanish, as well as French, German, and other languages, are included (with entries titles translated into English and noted accordingly)."

More than one hundred fifty years ago, Moravian missionaries first landed along a so-called isolated stretch of Honduras's Mosquito Coast bordering the western Caribbean Sea. The missionaries were sent, with the strong encouragement of German political leaders and in the context of German attempts at colonization, to spread the word of Protestantism in Central America. Upon their arrival, the missionaries employed a three-pronged approach consisting of proselytizing, medical treatment, and education to convert the majority of the indigenous population. Much like the Spanish and English attempts before them, German colonizing efforts in the region never completely took hold. Still, as Benjamin Tillman shows, for the region's indigenous inhabitants, the Miskito people, the arrival of the Moravian missionaries marked the beginning of an important cultural interface. Imprints on Native Lands documents Moravian contributions to the Miskito settlement landscape in sixty four villages of eastern Honduras through field observations of material culture, interviews with village residents, and research in primary sources in the Moravian Church archives. Tillman employs the resulting data to map a hierarchy of Moravian centers, illustrating spatially varying degrees of Moravian influence on the Miskito settlement landscape. Tillman reinforces Miskito claims to ancestral lands by identifying and mapping their created ethnic landscape, as well as supporting earlier efforts at land-use mapping in the region. This book has broad implications, providing a methodology that will be of help to those with an interest in geography, anthropology, or Latin American studies, and to anyone interested in documenting and strengthening indigenous land claims.

The Geography of Central America and Mexico Richard Luxton

As archaeologists peel away the jungle covering that has both obscured and preserved the ancient Maya cities of Mexico and Central America, other scholars have only a limited time to study and understand the sites before the jungle, weather, and human encroachment efface them again, perhaps forever. This urgency underlies Yaxchilan:

The Design of a Maya Ceremonial City, Carolyn Tate's comprehensive catalog and analysis of all the city's extant buildings and sculptures. During a year of field work, Tate fully documented the appearance of the site as of 1987. For each sculpture and building, she records its discovery, present location, condition, measurements, and astronomical orientation and reconstructs its Long Counts and Julian dates from Calendar Rounds. Line drawings and photographs provide a visual document of the art and architecture of Yaxchilan. More than mere documentation, however, the book explores the phenomenon of art within Maya society. Tate establishes a general framework of cultural practices, spiritual beliefs, and knowledge likely to have been shared by eighth-century Maya people. The process of making public art is considered in relation to other modes of aesthetic expression, such as oral tradition and ritual. This kind of analysis is new in Maya studies and offers fresh insight into the function of these magnificent cities and the powerful role public art and architecture play in establishing cultural norms, in education in a semiliterate society, and in developing the personal and community identities of individuals. Several chapters cover the specifics of art and iconography at Yaxchilan as a basis for examining the creation of the city in the Late Classic period. Individual sculptures are attributed to the hands of single artists and workshops, thus aiding in dating several of the monuments. The significance of headdresses, backracks, and other costume elements seen on monuments is tied to specific rituals and fashions, and influence from other sites is traced. These analyses lead to a history of the design of the city under the reigns of Shield Jaguar (A.D. 681-741) and Bird Jaguar IV (A.D. 752-772). In Tate's view, Yaxchilan and other Maya cities were designed as both a theater for ritual activities and a nexus of public art and social structures that were crucial in defining the self within Maya society. *Skywatchers* Peabody Museum of Archaeology &

The simple question "How did the Maya come up with a calendar that had only 260 days?" led Vincent Malmström to discover an unexpected "hearth" of Mesoamerican culture. In this boldly revisionist book, he sets forth his challenging, new view of the origin and diffusion of Mesoamerican calendrical systems—the intellectual achievement that gave rise to Mesoamerican civilization and culture. Malmström posits that the 260-day calendar marked the interval between

passages of the sun at its zenith over Izapa, an ancient ceremonial center in the Soconusco region of Mexico's Pacific coastal plain. He goes on to show how the calendar developed by the Zoque people of the region in the fourteenth century B.C. gradually diffused through Mesoamerica into the so-called "Olmec metropolitan area" of the Gulf coast and beyond to the Maya in the east and to the plateau of Mexico in the west. These findings challenge our previous understanding of the origin and diffusion of Mesoamerican civilization. Sure to provoke lively debate in many quarters, this book will be important reading for all students of ancient

Mesoamerica—anthropologists, archaeologists, archaeoastronomers, geographers, and the growing public fascinated by all things Maya.

In the 25 years since its original publication, *Space and Place* has not only established the discipline of human geography, but it has proven influential in such diverse fields as theater, literature, anthropology, psychology, and theology. Eminent geographer Yi-Fu Tuan considers the ways in which people feel and think about space, how they form attachments to home, neighborhood, and nation, and how feelings about space and place are affected by the sense of time. He suggests that place is security and space is freedom: we are attached to the one and long for the other. Whether he is considering sacred versus "biased" space, mythical space and place, time in experiential space, or cultural attachments to space, Tuan's analysis is thoughtful and insightful.

Exploring Ancient Skies brings together the methods of archaeology and the insights of modern astronomy to explore the science of astronomy as it was practiced in various cultures prior to the invention of the telescope. The book reviews an enormous and growing body of literature on the cultures of the ancient Mediterranean, the Far East, and the New World (particularly Mesoamerica), putting the ancient astronomical materials into their archaeological and cultural contexts. The authors begin with an overview of the field and proceed to essential aspects of naked-eye astronomy, followed by an examination of specific cultures. The book concludes by taking into account the purposes of ancient astronomy: astrology, navigation, calendar regulation, and (not least) the understanding of our place and role in the universe. *Skies* are recreated to display critical events as they would have appeared to ancient observers - events such as the supernova of 1054, the 'lion horoscope' or the 'Star of Bethlehem.'

Exploring Ancient Skies provides a

comprehensive overview of the relationships between astronomy and other areas of human investigation. It will be useful as a reference for scholars and students in both astronomy and archaeology, and will be of compelling interest to readers who seek a broad understanding of our collective intellectual history.

Maya sacbeob, or raised white roads, are often considered a single class of features, with a sole purpose. In this first systematic examination of their functions, meanings, arrangements, and construction styles, Justine Shaw reveals that these causeways served a variety of cultural and natural functions. In *White Roads of the Yucatán*, author Justine Shaw presents original field data collected with the Coahuah Regional Archaeological Survey at two ancient Maya sites, Ichmul and Yo'okop. Both centers chose to invest enormous resources in the construction of monumental roadways during a time of social and political turmoil in the Terminal Classic period. Shaw carefully examines why it was at this point—and no other—that the settlements made such a decision. She argues that both settlements used the sacbeob as a method of socially integrating the largest, most diverse and dispersed population in the Coahuah region. She further demonstrates that their use of the sacbeob, in concert with other innovative strategies, allowed Ichmul and Yo'okop to outlast many of the sites that they may have sought to emulate and to flourish during a time of tremendous sociopolitical and economic change. In addition to her detailed discussion of these two sites, Shaw provides an exhaustive review of the literature of Maya sacbeob archaeology, describing various interpretations of construction, features, and variability. This synthetic and interpretive treatment will aid researchers working on a variety of complex civilizations with road systems, as well as those interested in core-periphery relationships, cultural collapse, and social integration.
