HANNAH KARLEE

Generative and Transformational Techniques in Software Engineering II
Springer Science & Business Media
This tutorial book presents revised and extended lecture notes for a selection of the contributions presented at the International Summer School on Generative and Transformational Techniques in Software Engineering (GTTSE 2009), which was held in Braga, Portugal, in July 2009. The 16 articles comprise 7 long tutorials, 6 short tutorials and 3 participants contributions; they shed light on the generation and transformation of programs, data, models, metamodels, documentation, and entire software systems. The topics covered include software reverse and re-engineering, model driven engineering, automated software engineering, generic language technology, and software language engineering.

Generative and Transformational Techniques in Software Engineering III Kogan Page Publishers
Daily existence is more interconnected

to consumer behaviors than ever before, encompassing many issues of well-being. Problems include unhealthy eating; credit card mismanagement; alcohol, tobacco, pornography, and gambling abuse; marketplace discrimination; and ecological deterioration; as well as at-risk groups who are impoverished, impaired, or elderly. Opportunities for well-being via consumer behaviors include empowerment via the Internet, product sharing, leisure pursuits, family consumption, and pro-environmental activities, among others. In 2005 the Association for Consumer Research launched Transformative Consumer Research (TCR). Its mission is to foster research on quality of life that is both rigorous and applied for better assisting consumers, their caregivers, policy administrators, and executives. This edited volume includes 33 chapters on a wide range of topics by expert international authors. All royalties from sales of this book are donated to the Association to support TCR grants.

Generative and Transformational Techniques in Software Engineering IV
Routledge
This book addresses issues concerning the engineering of system products that make use of computing technology. These systems may be products in their own right, for example a computer, or

they may be the computerised control systems inside larger products, such as factory automation systems, transportation systems and vehicles, and personal appliances such as portable telephones. In using the term engineering the authors have in mind a development process that operates in an integrated sequence of steps, employing defined techniques that have some scientific basis. Furthermore we expect the operation of the stages to be subject to controls and standards that result in a product fit for its intended purpose, both in the hands of its users and as a business venture. Thus the process must take account of a wide range of requirements relating to function, cost, size, reliability and so on. It is more difficult to define the meaning of computing technology. These days this involves much more than computers and software. For example, many tasks that might be performed by software running in a general purpose computer can also be performed directly by the basic technology used to construct a computer, namely digital hardware. However, hardware need not always be digital; we live in an analogue world, hence analogue signals appear on the boundaries of our systems and it can sometimes be advantageous to allow them to penetrate further.

Digital Transformation Springer
Affecting every sector and country in the world, digital technology is changing the way citizens engage in society, companies conduct business, and governments deliver public services. The COVID-19 pandemic accelerated the pace of digitalization and exposed such vulnerabilities as inadequate infrastructure, weak regulations, and a scarcity of skilled professionals capable of digitally transforming government.

Not immune to the digital revolution, governments are slowly adapting to a digital world. Governments are implementing digital solutions to deliver services to their citizens, make payments, and engage the public. Focusing on how government can transition more effectively through digital transformation, *Pivoting Government Through Digital Transformation* covers the following key components: Setting the stage during the Great Resignation period Filling the digital talent pipeline Best practices and vignettes for applying digital transformation in government Looking ahead towards the future Key chapter contributors from U.S. and foreign governments, as well as state and local governments, discuss how they are coping with today's environment and how they are using digital transformation efforts to enhance their organization's effectiveness and digital talent pipeline. With chapters on theory and practice, this groundbreaking book offers an in-depth analysis of the most innovative approaches to e-government and discusses case studies from local, state, and federal government perspectives. This is an essential guide for government employees, scholars, and regular citizens who want to make government work more effectively and democratically in the digital age.

The Routledge Handbook of Transformative Global Studies Elsevier
This tutorial book presents an augmented selection of material presented at the International Summer School on Generative and Transformational Techniques in Software Engineering, GTTSE 2005. The book comprises 7 tutorial lectures presented together with 8 technology presentations and 6 contributions to the participants

workshop. The tutorials combine foundations, methods, examples, and tool support. Subjects covered include feature-oriented programming and the AHEAD tool suite; program transformation with reflection and aspect-oriented programming, and more.

Innovation IGI Global

Every organization makes plans for updating products, technologies, and business processes. But that's not enough anymore for the twenty-first-century company. The race is now on for everyone to become a digital enterprise. For those individuals who have been charged with leading their company's technology-driven change, the pressure is intense while the correct path forward unclear. Help has arrived! In *Driving Digital*, author Isaac Sacolick shares the lessons he's learned over the years as he has successfully spearheaded multiple transformations and helped shape digital-business best practices. Readers no longer have to blindly trek through the mine field of their company's digital transformation. In this thoroughly researched one-stop manual, learn how to:

- Formulate a digital strategy
- Transform business and IT practices
- Align development and operations
- Drive culture change
- Bolster digital talent
- Capture and track ROI
- Develop innovative digital practices
- Pilot emerging technologies

And more! Your company cannot avoid the digital disruption heading its way. The choice is yours: Will this mean the beginning of the end for your business, or will your digital practices be what catapults you into next-level success?

Transformational Products Springer
Science & Business Media

This book constitutes the thoroughly refereed post-proceedings of the 5th International Workshop on Product-Family Engineering, PFE 2003, held in Siena, Italy in November 2003. The 36 revised full papers presented together with an introductory overview and 3 keynote presentations were carefully selected during two rounds of reviewing and improvement. The papers are organized in topical sections on variation mechanisms, requirements analysis and management, product derivation, transition to family development, industrial experience, evolution, and decision and derivation.

The five digital forces (mobility and pervasive computing, cloud, big data, artificial intelligence and robotics, and social media) are poised to bring great academic and industrial breakthroughs. All stakeholders want to understand how to best harness these forces to their advantage. While literature exists for understanding each force independently, there is a lack of knowledge on how to utilize all the forces together to realize future enterprises. *Advanced Digital Architectures for Model-Driven Adaptive Enterprises* is an essential reference source that explores the potential in unifying the five digital forces to achieve increased levels of agility, efficiency, and scale. Featuring coverage on a wide range of topics including socio-technical systems, adaptive architectures, and enterprise modeling, this book is ideally designed for managers, executives, programmers, designers, computer engineers, entrepreneurs, tool builders, digital practitioners, researchers,

academicians, and students at the graduate level.

Requirements Engineering: Foundation for Software Quality IT Revolution

This book constitutes the refereed proceedings of the 13th International Working Conference on Requirements Engineering: Foundation for Software Quality, REFSQ 2007, held in Trondheim, Norway. It covers goal-driven requirements engineering (RE), products and product-lines, value-based RE and the value of RE, requirements elicitation, requirements specification, industrial experience of RE, and requirements quality and quality requirements.

Geometric Algebra for Computer Science Springer

We all live incredibly busy and stressful lives. Most of us find it impossible to take even a little bit of time-out to hit the pause button, kick back, and just relax a little. There's so much to do, too much to worry about, which can make indulging in a bit of me time nothing but a pipe dream. Believe me, I know how easy it is to not give your need for relaxation the priority you should. After many years of burning the candle at both ends, I became completely burned out. *How to Have a Day Spa at Home* is based upon the journey I made myself to pick up the pieces and start again. Having a day spa at home is such a treat. Consider reading this book as an investment in your overall health and well-being. You will learn how to spend the day completely indulging, pampering, and nourishing yourself from head to toe with DIY natural beauty treatments, as well as nutritious healthy meals. You don't need to spend a lot of money buying creams and potions. A lot of what you need for a day spa at home is right in your kitchen!

Product Focused Software Process Improvement Routledge

2020 - the year of the COVID-19 pandemic - changed everything. Its ripple effects will be felt for many years to come. At the same time there have been incredible advances in digitization. We are amid a digital revolution with unprecedented innovations. The pandemic has accelerated the requirements for "Digital Transformation." Organizations need to adopt and transform to survive and hopefully thrive. At the core of digitization there is very much an underlying principle of "debt." It comes originally from what is called "technical debt." Simply, technical debt "reflects the implied cost of additional rework caused by choosing an easy solution now instead of using a better approach that would take longer." Difficult transformative choices need to be made now - especially post-COVID-19. If an organization ignores digital transformation for "easy solutions", the "debt" accumulates and can have disastrous consequences. The pandemic has accelerated the accumulation of digital transformation debt! It has also provided an opportunity to thrive in the post-COVID-19 era. What does Digital Transformation mean? What are the opportunities? What are the core digital technologies? What are the best practices? What are practical recommendations to alleviate the Digital Transformation Debt!? This book addresses Digital Transformation Debt holistically and makes recommendations on how to alleviate the debt.

Living Labs B&H Publishing Group
 Digital Transformation in Industry 4.0/5.0 requires the effective and efficient application of digitalization technologies in the area of production systems. This

book elaborates on concepts, techniques, and technologies from computer science in the context of Industry 4.0/5.0 and demonstrates their possible applications. Thus, the book serves as an orientation but also as a reference work for experts in the field of Industry 4.0/5.0 to successfully advance digitization in their companies.

Software Product-Family Engineering

AuthorHouse

In today's complex world, the intersection of inclusion, equity, and organizational efficiency has reached unprecedented levels, driven by events like the great resignation, the emergence of workplace cultures such as #MeToo and Bro culture, and societal movements like Black Lives Matter and pandemic-exposed disparities. This convergence highlights the urgent need for transformative change in healthcare, education, business, and technology. Organizations grapple with issues like racial bias in Artificial Intelligence, fostering workplace psychological safety, and conflict management. The escalating demands for diversity and inclusivity present a pressing challenge, necessitating holistic solutions that harness collective perspectives to drive real progress. Transformational Interventions for Business, Technology, and Healthcare emerges as a beacon for academic scholars seeking actionable insights. Dr. Burrell's two decades of university teaching experience, combined with a prolific record of academic publications and presentations, uniquely positions them to lead the way. The book, through an interdisciplinary lens, addresses the intricate challenges of our times, offering innovative solutions to reshape organizations and promote inclusivity. Covering topics such as workplace

intersectionality, technology's impact on equity, and organizational behavior dynamics, this comprehensive resource directly addresses scholars at the forefront of shaping our future. By dissecting problems and providing evidence-based solutions, the book empowers readers to contribute significantly to the ongoing dialogue on inclusion, equity, and organizational development, making it a guiding light as the call for change reverberates across industries.

Pivoting Government through Digital Transformation BoD - Books on Demand

The second instance of the international summer school on Generative and Transformational Techniques in Software Engineering (GTTSE 2007) was held in Braga, Portugal, during July 2-7, 2007. This volume contains an augmented selection of the material presented at the school, including full tutorials, short tutorials, and contributions to the participants workshop. The GTTSE summer school series brings together PhD students, lecturers, technology presenters, as well as other researchers and practitioners who are interested in the generation and the transformation of programs, data, models, metamodels, documentation, and entire software systems. This concerns many areas of software engineering: software reverse and re-engineering, model-driven engineering, automated software engineering, generic language technology, to name a few. These areas differ with regard to the specific sorts of metamodels (or grammars, schemas, formats etc.) that underlie the involved artifacts, and with regard to the specific techniques that are employed for the generation and the transformation of the artifacts. The first instance of the school

was held in 2005 and its proceedings appeared as volume 4143 in the LNCS series.

Foundations of Health Information Engineering and Systems Springer

In the 21st century, marketing is in the midst of dramatic change - and the CMO role is changing with it. The marketing of the 20th century was defined by mass production and mass communication. It required an inside-out logic that began with the product and ended with the consumer. Today's marketing operates the other way around: it starts with people and their experiences and works its way backwards to products, technologies and processes. Marketing is about to hit the next level, and thus the chief marketing officer role needs to grow to match. This book profiles marketeers and CMOs from leading brands such as Banana Republic, Bayer, Generali, Gucci, Jägermeister, Katjes, Oatly, smart, Tony's Chocolonely, Unilever, Zalando and many more. What are their views, how do they perceive today's marketing and their role in it, and what skills will every CMO need to meet the challenges of marketing in the future?

Street Data IGI Global

Strategies for the Sustainable Transformation of Developing Countries attempts a holistic-solution approach through sustainable development concepts and principles to address challenges in developing countries. In fact, the book is the application of sustainable development, and thus it offers strategies that could be applied to the development and transformation of social, economical, and environmental dimensions of society using the example of Nigeria, a developing country in West Africa. The book is divided into five parts, covering critical subjects of

development which include education, government and good governance, community security, leadership, and community development. It provides answers to how sustainable development can bring change and benefits to these subject matters within the context of developing countries, using Nigeria as an example. This book is very different from many other book written on the challenges of development, particularly on African countries, in the sense that it gives priority to solutions and mapping them out in a feasible, sustainable, and practical way. The cornerstone of the book is the emphatic suggestion of a national transition initiative programme and Sustainable Community development Programme to drive sustainable development from the top and the bottom of society respectively. *How to Have a Day Spa at Home* YOUTH COMPETITION TIMES

Every major enterprise has a significant installed base of existing software systems that reflect the tangled IT architectures that result from decades of patches and failed replacements. Most of these systems were designed to support business architectures that have changed dramatically. At best, these systems hinder agility and competitiveness and, at worst, can bring critical business functions to a halt. Architecture-Driven Modernization (ADM) restores the value of entrenched systems by capturing and retooling various aspects of existing application environments, allowing old infrastructures to deliver renewed value and align effectively with enterprise strategies and business architectures. Information Systems Transformation provides a practical guide to organizations seeking ways to

understand and leverage existing systems as part of their information management strategies. It includes an introduction to ADM disciplines, tools, and standards as well as a series of scenarios outlining how ADM is applied to various initiatives. Drawing upon lessons learned from real modernization projects, it distills the theory and explains principles, processes, and best practices for every industry. Acts as a one-stop shopping reference and complete guide for implementing various modernization models in myriad industries and departments. Every concept is illustrated with real-life examples from various modernization projects, allowing you to immediately apply tested solutions and see results. Authored by the Co-chair of the Object Management Group (OMG) Architecture-Driven Modernization (ADM) Task Force, which sets definitive systems modernization standards for the entire IT industry. A web site supports the book with up to date coverage of evolving ADM Specifications, Tutorials, and Whitepapers, allowing you to remain up to date on modernization topics as they develop.

Driving Digital Springer

It is time to take heart and rework the scorecard. --

Second Generation Cell and Gene-Based Therapies Springer Science & Business Media

Second Generation Cell and Gene-Based Therapies: Biological Advances, Clinical Outcomes, and Strategies for Capitalisation serves as the only volume to the market to bridge basic science, clinical therapy, technology development, and business in the field of cellular therapy/cytherapy. After more

than two decades of painstaking fundamental research, the concept of therapeutic cells (stem cells, genes, etc.), beyond the concept of vaccines, is reaching clinical trial, with mounting confidence in the safety and efficacy of these products. Nonetheless, numerous incremental technical advances remain to be achieved. Thus, this volume highlights the possible R&D paths, which will ultimately facilitate clinical delivery of cutting edge curative products. The next waves of innovation are reviewed in depth for hematopoietic stem cells, mesenchymal stem cells, tissue engineering, CAR-T cells, and cells of the immune system, as well as for enabling technologies such as gene and genome editing. Additionally, deep dives in product fundamentals, history of science, pathobiology of diseases, scientific and technological bases, and financing and technology adoption constraints are taken to unravel what will shape the cytotherapy industry to the horizon 2025 and beyond. The outcome is not simply a scientific book, but a global perspective on the nascent field combining science, business, and strategic fundamentals. Helps readers learn about the most current trends in cell-based therapy, their overall effectiveness from a clinical prospective, and how the industry is moving therapies forward for capitalization. "Perspectives" section at the end of each chapter summarizes key learnings, hypotheses, and objectives highlighted and combines scientific and business insights. Edited and authored by scientists representing both basic and clinical research and industry, presenting a complete story of the current state and future promise of cellular therapies.
