 Reconstructing Value prepares  
 contemporary business leaders for the  
 increasingly important task of  
 developing a sustainability vision and  
 translating it across levels in an  
 organization. The book is based on  
 insights gained over the past decade  
 from research involving hundreds of  
 practitioners, front line managers to  
 senior executives, who have been

working to integrate sustainability within  
 their organizations. It illustrates how  
 building capacity for managing the  
 complex issues of sustainability requires  
 key process skills that leaders need to  
 develop. This book equips readers to  
 respond to the risks and opportunities  
 presented by global sustainability issues  
 and reinvent new ways of doing business  
 that will enhance organizational  
 effectiveness while also building a more  
 sustainable world. Each chapter includes  
 process questions to guide reflective  
 practice and to build the requisite  
 leadership capabilities for turning a

sustainability vision into a value-added organizational strategy. *Reconstructing Value* helps readers to build integrative thinking skills – such as how to engage critical, complexity, strategic and design thinking capabilities to enable organizational change – that can assist them with becoming successful sustainability champions within their organizations.

The underpinning assumption of public management in the developing world as a process of planned change is increasingly being recognized as unrealistic. In reality, the practice of development management is characterized by processes of mutual adjustment among individuals, agencies, and interest groups that can constrain behaviour, as well as provide incentives for collaborative action. Paradoxes inevitably emerge in policy network practice and design. The ability to manage government departments and operations has become less important than the ability to navigate the complex world of interconnected policy implementation processes. Public sector reform policies and programmes, as a consequence, are a study in the complexities of the institutional and environmental context in which these reforms are pursued. Building on theory and practice, this book argues that advancing the theoretical frontlines of development management research and practice can benefit from developing models based on innovation, collaboration and governance. The themes addressed in *Public Sector Reforms in Developing Countries* will enable public managers in developing countries cope in uncertain and turbulent environments as they seek optimal fits between their institutional

goals and environmental contingencies.

Casuistic or case law in the Pentateuch deals with real human affairs; each case law entails a compressed story that can encourage reader engagement with seemingly “dry” legal text. This book is the first to present an interpretive method integrating biblical law, jurisprudence, and literary theory, reflecting the current “law and literature” school within legal studies. It identifies the narrative elements that exist in the laws of the Pentateuch, exposes the narrative techniques employed by the authors, and discovers the poetics of biblical law, thus revealing new or previously unconsidered aspects of the relationship between law and narrative in the Bible.

Leading scholars in the social sciences, public health and religion examine the embodied sacred practices of the world's religions, the history of alignment and tension between religious and public health institutions and the role of religious institutions in health and development efforts around the globe.

A guidebook for those who want to cultivate literary taste— knowing how to recognize and benefit from books that are spiritually and aesthetically good. Literary expert Gene Veith helps book

lovers better understand what they read as he explains how each major literary genre communicates. Showing how comedy, tragedy, realism, and fantasy can portray the Christian worldview, Veith delves into related topics such as the value of fairy tales, the tragic and the comic sense of life, the contrast between the classical and the Hebraic traditions, and the role of postmodernity (a subject of vital importance to Christians). Introducing readers to writers past and present, Veith helps Christians to influence culture from an educated perspective and get more out of their reading.

*Provider-Led Population Health Management: Key Healthcare Strategies in the Cognitive Era, Second Edition* draws connections among the new care-delivery models, the components of population health management, and the types of health IT that are required to support those components. The key concept that ties all of this together is that PHM requires a high degree of automation to reach everyone in a population, engage those patients in self-care, and maximize the chance that they will receive the proper preventive, chronic, and acute care. While this book is intended for healthcare executives and policy experts, anyone who is interested in health care can learn something from its exploration of the major issues that are stirring health care today. In the end, the momentous changes going on in health care will affect us all.

*Reaction Kinetics and the Development and Operation of Catalytic Processes* is a trendsetter. The Keynote Lectures have been authored by top scientists and cover a broad range of topics like fundamental aspects of surface chemistry, in particular dynamics and spillover, the modeling of reaction mechanisms, with special focus on the importance of transient experimentation and the application of kinetics in reactor design. Fundamental and applied kinetic studies are well represented. More than half of these deal with transient kinetics, a new trend made possible by recent

sophisticated experimental equipment and the awareness that transient experimentation provides more information and insight into the microphenomena occurring on the catalyst surface than steady state techniques. The trend is not limited to purely kinetic studies since the great majority of the papers dealing with reactors also focus on transients and even deliberate transient operation. It is to be expected that this trend will

continue and amplify as the community becomes more aware of the predictive potential of fundamental kinetics when combined with detailed realistic modeling of the reactor operation.
