*Waterfront Revitalization and Local Governance in Tallinn, Estonia* John Wiley & Sons

This open access book explores the strategic importance and advantages of adopting multidisciplinary and multiscale approaches of inquiry and intervention with respect to the built environment, based on principles of sustainability and circular economy strategies. A series of key challenges are considered in depth from a multidisciplinary perspective, spanning engineering, architecture, and regional and urban economics. These challenges include strategies to relaunch socioeconomic development through regenerative processes, the regeneration of urban spaces from the perspective of resilience, the development and deployment of innovative products and processes in the construction sector in order to comply more fully with the principles of sustainability and circularity, and the development of multiscale approaches to enhance the performance of both the existing building stock and new buildings. The book offers a rich selection of conceptual, empirical, methodological, technical, and case study/project-based research. It will be of value for all who have an interest in regeneration of the built environment from a circular economy perspective.

**Urban Regeneration in Eastern Europe** Springer Nature

Approaches to urban regeneration have changed dramatically throughout Europe and the USA over recent decades, drawing on notions of public-private partnership, growth coalitions and local spatial alliances. In this engaging book John McCarthy provides critical consideration of such theories in terms of their application to practice. He shows how these notions are used to explain the nature and underlying processes of urban development and to further objectives for urban regeneration. To test their applicability, he examines the case of Dundee, including the role of the Dundee Partnership, a model for many aspects of partnership working. The resulting conclusions suggest ways in which the practice of urban regeneration can be improved in terms of inclusion, equity and sustainability.

*Urban Regeneration of Large Housing Estates in Europe: Hamburg and Niš Narratives* Routledge

Urban planning is undergoing a period of transformation across Europe, with a major trend towards increased urban competition, national deregulation and greater private sector influence. Urban Planning in Europe is the first comprehensive analysis of the influence of countries is developed, presenting the similarities and differences of each country's national planning system. The authors use detailed case studies to explore planning policies in a range of European cities, and discuss the social and environmental objectives that influence today's urban planner. Urban Planning in Europe is an essential guide to contemporary European planning projects and highlighting opportunities for innovation which contain vital lessons for the future of urban decision making.

*cities in North America and Europe* John Wiley & Sons

Effective governance is vital for all nations and can be made easier with advanced technology and communication. Through various collaborative efforts and processes, developing nations can

enhance their economies with multi-level governance. Multi-Level Governance in Developing Economies is a collection of innovative research on the applications and theories of multi-level governance in the developing world. It illustrates the practical side of multi-level governance by emphasizing special policies such as immigration, innovation, climate, local government, and construction. While highlighting topics including Europeanization, politics of the developing world, and immigration policies, this book is ideally designed for academicians, policymakers, government officials, and individuals seeking current research on the usage and impact of multi-level governance in emerging economies.

*Cities in North America and Europe* Routledge

Written in a clear and concise style, this Modern Guide provide a timely overview and comparison of urban challenges and national urban policies in 13 European countries, addressing key issues such as housing, urban regeneration and climate change. A team of international contributors explore the gap between the rise of international urban agendas and variegated national urban policies, examining whether a more bespoke approach is better than the traditional 'one size fits all'.

*The West European Experience* Routledge

The aim of this thesis is to not only understand urban regeneration issues, but also to examine European and Turkish urban regeneration examples with making comparative study between them to present necessity and importance of urban regeneration for the future of cities. Cities, which have been result of the social, economical, physical and cultural interaction, have developed urban policies for urban areas where have experienced rapid change and transformations not only to keep step with this transformation and solve urban problems revealed after these changes but also to provide new urban requirements of people. Urban regeneration issue has been key element for renewing, re-evaluating of places where have been lost their economic activity, social and physical functions. In this framework, firstly aim of this study has been identified and definition of urban regeneration has been made as an introduction. Motives and results of transformation of cities have been determined. Evaluation of general framework of urban regeneration has been described with basic definitions of urban regeneration tools. Objectives of urban regeneration issue have been presented in terms of social, economical, physical and cultural. Urban regeneration process, strategy and policy in five different European countries have been described. Urban regeneration examples in these countries have been examined evaluated, specified according to characteristic features. Evolution of urban regeneration in Turkey has been stated with motives behind and then some urban regeneration examples have been examined. As a consequence, comparative study between Europe and Turkey has been made in respect of motives, objectives and results. Importance and necessity of urban regeneration projects for future of the city has been presented.

*Lille Conference, 30 November-2 December, 1983 : Proceedings* Routledge

In recent years, major sporting and cultural events such as the Olympic Games have emerged as significant elements of public policy, particularly in efforts to achieve urban regeneration. As well as opportunities arising from new venues, these events are viewed as a way of stimulating investment, gaining civic engagement and publicizing progress to assist the urban regeneration process more

generally. However, the pursuit of regeneration involving events is a practice that is poorly understood, controversial and risky. *Events and Urban Regeneration* is the first book dedicated to the use of events in regeneration. It explores the relationship between events and regeneration by analyzing a range of cities and a range of sporting and cultural events projects. It considers various theoretical perspectives to provide insight into why major events are important to contemporary cities. It examines the different ways that events can assist regeneration, as well as problems and issues associated with this unconventional form of public policy. It identifies key issues faced by those tasked with using events to assist regeneration and suggests how practices could be improved in the future. The book adopts a multi-disciplinary perspective, drawing together ideas from the geography, urban planning and tourism literatures, as well as from the emerging events and regeneration fields. It illustrates arguments with a range of international case studies placed within and at the end of chapters to show positive outcomes that have been achieved and examples of high profile failures. This timely book is essential reading for students and practitioners who are interested in events, urban planning, urban geography and tourism.

*Social Fragmentation, Social Exclusion and Urban* Routledge

This title was first published in 2001. This volume is a result of the action COST A9 "Civitas - Transformation of European Cities and Urban Governance", launched in 1995, which looks at the emergence of the urban question. The COST framework is a European mechanism to provide scientific and technical assistance for national research programmes. The text covers the change in the importance of European cities and analyzes how each city re-formulates its policies and methods of governing in response to these changes. This text is to analyze the new forms of urban governance using three points of view, a statistical approach, an economic approach and a sociological approach. This book tackles the fragmentation and social exclusion that occurs in urban society and explores the different forms it takes throughout Europe. It also presents some strategies to combat or at least regulate this fragmentation, to ensure a united European city.

*Ecodistricts : strategies and techniques for urban regeneration in Europe* John Wiley & Sons

This book has one central theme: how, in the United Kingdom, can we create better cities and towns in which to live and work and play? What can we learn from other countries, especially our near neighbours in Europe? And, in turn, can we provide lessons for other countries facing similar dilemmas? Urban Britain is not functioning as it should. Social inequalities and regional disparities show little sign of going away. Efforts to generate growth, and spread it to the poorer areas of cities, have failed dismally. Much new urban development and redevelopment is not up to standard. Yet there are cities in mainland Europe, which have set new standards of high-quality sustainable urban development. This book looks at these best-practice examples – in Germany, the Netherlands, France and Scandinavia, – and suggests ways in which the UK and other countries could do the same. The book is in three parts. Part 1 analyses the main issues for urban planning and development – in economic development and job generation, sustainable development, housing policy, transport and development mechanisms – and probes how practice in the UK has fallen short. Part Two embarks on a tour of best-practice cities in Europe, starting in Germany with the country's boosting of its cities' economies, moving to the spectacularly successful new housing developments in the Netherlands, from there to France's integrated city transport, then to Scandinavia's pursuit of

sustainability for its cities, and finally back to Germany, to Freiburg – the city that 'did it all'. Part Three sums up the lessons of Part Two and sets out the key steps needed to launch a new wave of urban development and regeneration on a radically different basis.

*Social Exclusion and Urban Regeneration* BWV Verlag

*Mapping Urban Spaces* focuses on medium-sized European cities and more specifically on their open spaces from psychological, sociological, and aesthetic points of view. The chapters illustrate how the characteristics that make life in medium-sized European cities pleasant and sustainable – accessibility, ease of travel, urban sustainability, social inclusiveness – can be traced back to the nature of that space. The chapters develop from a phenomenological study of space to contributions on places and landscapes in the city. Centralities and their meaning are studied, as well as the social space and its complexity. The contributions focus on history and theory as well as concrete research and mapping approaches and the resulting design applications. The case studies come from countries around Europe including Poland, Italy, Greece, Germany, and France, among others. The book will be of interest to students, scholars, and practitioners in architecture, urban planning, and landscape architecture.

*The Quality of Territorial Policies in Europe's Periphery* Routledge

This book provides an in-depth analysis of the role of property investment and development in the urban regeneration process. It relates the physical, economic, financial and environmental aspects of urban change and development to the realities of particular cities by case studies drawn from Britain and Europe.

*Urban Regeneration of Large Housing Estates in Europe: Hamburg and Niš Narratives* Routledge

Document from the year 2017 in the subject Urban and Regional Planning, grade: PhD, Islamic Azad University, language: English, abstract: Urban waterfront regeneration started in the 1960s in the US, spread widely during the 1970s and 1980s throughout North America; in the following decades, it became a key factor in inner city redevelopment in Europe (Jauhiainen 1995). It reflects efforts in various cities around the world to transform the de-industrialized, derelict urban spaces of late-twentieth-century capitalism in such a way that these respond to the newly rising demands of the global economy and, thus, once again emerge as attractive sites for different groups (Merrifield 1993, Feldman 2000). In physical terms, urban waterfront regeneration often involves a transition from former centers of industrial production, with warehouses and manufacturing establishments, to places with promenades, shopping complexes, luxurious residences, gentrified neighborhoods, office towers, and the like. In this respect, urban waterfront regeneration can be situated within the broader theoretical framework that focuses on multiple processes of globalization and its impact on the urban space. More specifically, this phenomenon can be examined within a context of growing intercity competition, of intense efforts to market cities and push them up in the global urban hierarchy. Hence, the very same analytical lenses used for the examination of efforts to host mega-events (e.g. Gotham 2002, Carmichael 2002, Owen 2002), promote urban tourism (e.g. Mullins 1991, Whitson and Macintosh 1996, Law 2002), or create various urban imaging strategies (Chang 1999, Waitt 1999) and the like can be employed to elucidate the case of urban waterfront regeneration as well. What makes the latter special and also perhaps explains the reason why a large segment of the relevant literature focuses on this subject has to do with the fact that, first, due

to previous port-related and industrial activity, the process of de-industrialization often has its most visible impact in these areas (Marshall 2001); and, second, due to their proximity to water and often also to historic city centers, these locations are especially suitable to satisfy the newly rising demands of global capital and its managerial elite.

Urban Regeneration in European Regions of Old Industry GRIN Verlag

Urban sprawl is one of the most important types of land-use changes currently affecting Europe. It increasingly creates major impacts on the environment (via surface sealing, emissions by transport and ecosystem fragmentation); on the social structure of an area (by segregation, lifestyle changes and neglecting urban centres); and on the economy (via distributed production, land prices, and issues of scale). *Urban Sprawl in Europe: landscapes, land-use change & policy* explains the nature and dynamics of urban sprawl. The book is written in three parts. Part I considers contemporary definitions, theories and trends in European urban sprawl. In part II authors draw upon experiences from across Europe to consider urban sprawl from a number of perspectives: Infrastructure-related sprawl, such as can be seen around Athens; Sprawl in the post-socialist city, as typified by Warsaw, Leipzig and Ljubljana; Decline and sprawl, where a comparative analysis of Liverpool and Leipzig shows that sprawl is not confined to expanding cities; Sprawl based on the development of second homes as found in Sweden, Austria and elsewhere. In part III a formal qualitative model of sprawl is developed. Policies for the control of urban sprawl and the roles of different stakeholders are considered. Finally, a concluding chapter raises questions about the nature and dynamics of these new urban landscapes and their sustainability.

**Leadership and Urban Regeneration** Manchester University Press

Urban shrinkage is rising to the top of the political agenda in Europe as more cities are shrinking in the prolonged economic downturn we encounter. Coupled with unprecedented budgetary austerity and rapidly ageing populations, 'stagnating' and 'shrinking' cities have emerged as a key challenge for policy and practice for decades to come. Local actors need to find new ways of collaborating across sectors, agencies and disciplines to unlock opportunities for interventions that mitigate the worst effects of urban shrinkage and long-term decline. *Future Directions for the European Shrinking City* focuses on policy and planning interventions that can be taken by municipalities and their local stakeholders to tackle stagnation and decline. With case studies from a range of European countries this book proposes ways to tackle shrinkage through governance, policy, planning, social, economic and management interventions. Edited by William J.V. Neill and Hans Schlappa, this book is ideally suited for policy makers and practitioners in urban planning, regeneration, and economic development dealing with pressing spatial and socio-economic issues on a European scale.

Urban Regeneration in Europe Routledge

*Changing Contexts in Urban Regeneration* shows that urban renewal should take an integrated approach to the physical, environmental, social and economic programmes, based on fundamental solutions that stand the test of time. *Changing Contexts in Urban Regeneration* presents a comprehensive overview of relevant theory, next, it evaluates the urban renewal plans carried out over the last 30 years.

**A Revolution in Urban Sustainability** SAGE

With cities striving to meet sustainable development goals, circular urban systems are gaining

momentum, especially in Europe. This research-based book defines the circular city and circular development. It explains the shift in focus from a purely economic concept, which promotes circular business models in cities, to one that explores a new approach to urban development. This approach offers huge opportunities and addresses important sustainability issues: resource consumption and waste; climate change; the health of urban populations; social inequalities and the creation of sustainable urban economies. It examines the different approaches to circular development, drawing on research conducted in four European cities: Amsterdam, London, Paris and Stockholm. It explores different development pathways and levers for a circular urban transformation. It highlights the benefits of adopting a circular approach to development in cities, but acknowledges that these benefits are not shared equally across society. Finally, it focuses on the challenges to implementing circular development faced by urban actors. This ground-breaking book will be essential reading to scholars, students, practitioners and policymakers interested in the circular economy, urban sustainability, urban ecology, urban planning, urban regeneration, urban resilience, adaptive cities and regenerative cities.

Springer Nature

In the past decade, urban regeneration policy makers and practitioners have faced a number of difficult challenges, such as sustainability, budgetary constraints, demands for community involvement and rapid urbanization in the Global South. Urban regeneration remains a high profile and important field of government-led intervention, and policy and practice continue to adapt to the fresh challenges and opportunities of the 21st century, as well as confronting long standing intractable urban problems and dilemmas. This Companion provides cutting edge critical review and synthesis of recent conceptual, policy and practical developments within the field. With contributions from 70 international experts within the field, it explores the meaning of 'urban regeneration' in differing national contexts, asking questions and providing informed discussion and analyses to illuminate how an apparently disparate field of research, policy and practice can be rendered coherent, drawing out common themes and significant differences. The Companion is divided into six sections, exploring: globalization and neo-liberal perspectives on urban regeneration; emerging reconceptualizations of regeneration; public infrastructure and public space; housing and cosmopolitan communities; community centred regeneration; and culture-led regeneration. The concluding chapter considers the future of urban regeneration and proposes a nine-point research agenda. This Companion assembles a diversity of approaches and insights in one comprehensive volume to provide a state of the art review of the field. It is a valuable resource for both advanced undergraduate and postgraduate students in Urban Planning, Built Environment, Urban Studies and Urban Regeneration, as well as academics, practitioners and politicians.

Urban regeneration in England, France and the Netherlands John Wiley & Sons

All countries aim to improve housing conditions for their citizens but many have been forced by the financial crisis to reduce government expenditure. Social housing is at the crux of this tension. Policy-makers, practitioners and academics want to know how other systems work and are looking for something written in clear English, where there is a depth of understanding of the literature in other languages and direct contributions from country experts across the continent. *Social Housing in Europe* combines a comparative overview of European social housing written by scholars with in-

depth chapters written by international housing experts. The countries covered include Austria, Denmark, England, France, Germany, Hungary, Ireland, The Netherlands and Sweden, with a further chapter devoted to CEE countries other than Hungary. The book provides an up-to-date international comparison of social housing policy and practice. It offers an analysis of how the social housing system currently works in each country, supported by relevant statistics. It identifies European trends in the sector, and opportunities for innovation and improvement. These country-specific chapters are accompanied by topical thematic chapters dealing with subjects such as the role of social housing in urban regeneration, the privatisation of social housing, financing models, and the impact of European Union state aid regulations on the definitions and financing of social housing.

**Urban Regeneration** Macmillan International Higher Education

Urban Regeneration — A Manifesto for transforming UK Cities in the Age of Climate Change explores and offers guidance on the complex process of how to transform cities, continuing the unfinished project of the seminal 1999 text Towards an Urban Renaissance. It is a 21st-century manifesto of

urban principles compiled by a prominent urbanist, for the regeneration of UK cities, focusing on the characteristics of a 'good place' and the strategies of sustainable urbanism. It asks readers to consider how we can best transform the derelict, abandoned and run-down parts of cities back into places where people want to live, work and play. The book frames an architecture of re-use that translates and combines the complex 'science of cities' and the art of urban and architectural design into actionable and practical guidance on how to regenerate cities. Fascinated by the typology and value of the compact UK and European city model, Lehmann introduces the concept of 'high density without high buildings' as a solution that will make our cities compact, walkable, mixed-use and vibrant again.

**Urban Regeneration and Environmental Protection** Springer

The material in this book is based upon an academic conference held in Liverpool in 1990 which explored West European urban development and strategies by looking at commissioned studies of cities in six EC countries - Britain, The Netherlands, France, Spain, Germany and Italy.
