HRM (human resource management) suffers from a selective tendency and ad hoc approach, which misses the historical, paradoxical often incoherent, incompatible and inconsistent nature of the subject. This text reduces this myopia by adding to our knowledge and the milieu within which it operates.

Examining Current Conditions in the Trucking Industry and the Possible Necessity for Change in the Manner and Scope of Its Regulations Elsevier

In the late nineteenth century, the urban department store arose as a built artifact and as a social institution in the United States. While the physical building type is the foundation of this comprehensive architectural study, Louisa Iarocci reaches beyond the analysis of the bricks and mortar to reconsider how the 'spaces of selling' were culturally-produced spaces, as well as the product of interrelated economic, social, technological and aesthetic forces. The agenda of the book is three-fold; to address the lack of a comprehensive architectural study of the nineteenth century department store in the United States; to expand the analysis of the commercial city as a built and represented entity; and to continue recent scholarly efforts that seek to understand commercial space as a historically specific and a conceptually perceived construct. *The Urban Department Store in America, 1850-1930* acts as a corrective to a current imbalance in the historiography of this retailing institution that tends to privilege its role as an autonomous 'modern' building type. Instead, Iarocci documents the development of the department store as

an urban institution that grew out of the built space of the city and the lived spaces of its occupants.
