Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

In photography, every decision, creative and technical, rides on achieving a good exposure. When shooting portraits or products, landscapes or architecture, we must control our camera's settings to ensure that just the right amount of light is allowed into the camera. When we strike the right balance in our exposure, we have a full range of tones, from pure white to deep blacks. We have rich visual detail. We have a sense of dimension. The colors and tones and contrast in our images weave the visual story of our subject and scene in a way that visually computes. As a result, we see just the image we strove to create, rendered perfectly in a way that satisfies our creative vision. In this book, Mark Chen shows you how to take full control over the science of exposure, providing you with the foundational skill-set you need to maximize your artistic vision.
