'One of the most important books I've read in years' Brian Eno We are losing the commons. Austerity and neoliberal policies have depleted our shared wealth; our national utilities have been sold off to foreign conglomerates, social housing is almost non-existent, our parks are cordoned off for private events and our national art galleries are sponsored by banks and oil companies. This plunder deprives us all of our common rights, recognized as far back as the Magna Carta and the Charter of the Forest of 1217, to share fairly and equitably in our public wealth. Guy Standing leads us through a new appraisal of the commons, stemming

from the medieval concept of common land reserved in ancient law from marauding barons, to his modern reappraisal of the resources we all hold in common - a brilliant new synthesis that crystallises quite how much public wealth has been redirected to the 1% in recent decades through the state-approved exploitation of everything from our land to our state housing, health and benefit systems, to our justice system, schools, newspapers and even the air we breathe. Plunder of the Commons proposes a charter for a new form of commoning, of remembering, guarding and sharing that which belongs to us all, to slash inequality and soothe our current political instability.

Tragedy in the Commons Routledge
Our world is overpopulated. This fact lies outside of the typical activist's perspective and doesn't fit into society's dominant anthropocentric worldview. When it comes to our use of natural resources, we are taught to consider issues related to consumption such as energy efficiency and recycling. However, the number of people - and how fast that number is growing - is a more important factor. More people consume more resources, need more services, produce more waste, and create more world conflict as resources diminish. Working on downstream issues, such as saving the environment, feeding the hungry, and ending homelessness, is noble but ineffective and inefficient without also working to solve the primary cause of these and other important issues. In *Move Upstream: A Call to Solve Overpopulation*, Karen Shragg challenges social and environmental activists to stop working downstream and take the problem of overpopulation seriously. She also provides compassionate ideas to solve the problem. PRAISE FOR MOVE UPSTREAM "The bravest book on human overpopulation yet. It will open your eyes, even if you have taped them shut. Shocking and provocative, *Move Upstream* has the courage to name names and proscribe the simple truth on how to combat the overpopulation crisis." - Alexandra Paul, actress and activist "A boldly truthful and hopeful book." -World Population Balance "Karen Shragg has hit the nail on the head of overpopulation denial and offers sensible solutions to this crisis." -Bruce Phillips of One Planet One Child

The Limits to Growth Routledge
An exploration of the interplay between social responsibility, entrepreneurship and the common good which is organized into four sections: business and the common good; educating responsible entrepreneurs; corporate social responsibility (CSR) challenges and the common good; and CSR and entrepreneurship in emerging economies
Population Politics Springer
This two-volume Encyclopedia of Global Justice, published by Springer, along with Springer's book series, *Studies in Global Justice*, is a major publication venture toward a comprehensive coverage of this timely topic. The Encyclopedia is an international, interdisciplinary, and collaborative project, spanning all the relevant areas of scholarship related to issues of global justice, and edited and advised by leading scholars from around the world. The wide-ranging entries present the latest ideas on this complex

subject by authors who are at the cutting edge of inquiry. The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come. The entries number around 500 and consist of essays of 300 to 5000 words. The inclusion and length of entries are based on their significance to the topic of global justice, regardless of their importance in other areas.

Mandatory Motherhood Changing Suns Press
Winner of the Sierra Club's 2021 Rachel Carson Award One of Chicago Tribune's Ten Best Books of 2021 Named a Top Ten Best Science Book of 2021 by Booklist and Smithsonian Magazine "At once thoughtful and thought-provoking," *Beloved Beasts* tells the story of the modern conservation movement through the lives and ideas of the people who built it, making "a crucial addition to the literature of our troubled time" (Elizabeth Kolbert, author of *The Sixth Extinction*). In the late nineteenth century, humans came at long last to a devastating realization: their rapidly industrializing and globalizing societies were driving scores of animal species to extinction. In *Beloved Beasts*, acclaimed science journalist Michelle Nijhuis traces the history of the movement to protect and conserve other forms of life. From early battles to save charismatic species such as the American bison and bald eagle to today's global effort to defend life on a larger scale, Nijhuis's "spirited and engaging" account documents "the changes of heart that changed history" (Dan Cryer, *Boston Globe*). With "urgency, passion, and wit" (Michael Berry, *Christian Science Monitor*), she describes the vital role of scientists and activists such as Aldo Leopold and Rachel Carson, reveals the origins of vital organizations like the Audubon Society and the World Wildlife Fund, explores current efforts to protect species such as the whooping crane and the black rhinoceros, and confronts the darker side of modern conservation, long shadowed by racism and colonialism. As the destruction of other species continues and the effects of climate change wreak havoc on our world, *Beloved Beasts* charts the ways conservation is becoming a movement for the protection of all species including our own.

The Palgrave Environmental Reader Springer Science & Business Media
Imagines a village in which there are too many people consuming shared resources and discusses the challenge of handling our world's environment safely.
Earthcare W. W. Norton & Company
The Palgrave Environmental Reader explores America's evolving fascination

with nature and environmental concerns. From the New England Transcendentalists to the UN convention on climate change, this book includes works by Thomas Jefferson, Henry David Thoreau, Theodore Roosevelt, Rachel Carson, E.O. Wilson, and others. Consisting of thirty-five important pieces covering a variety of issues, this reader distinguishes itself from other writing on the subject by presenting more extensive excerpts and by emphasizing themes such as environmental activism, racism, and law.

The Ostrich Factor Penguin UK
"For 20 years Garrett Hardin has been our most hardnosed thinker about ecological problems...Filters Against Folly makes provocative reading." -- Michael Crichton
The ecological problems facing our world present a forum for experts to offer slogans and solutions on all sides of the issue, but leave most of us confused and unsure of the future. In this bracing book, Garrett Hardin offers a plan for clear thinking about these dangers. He shows how the filters of literacy, understanding what words really mean; numeracy, being able to quantify and interpret information; and ecolacy, assessment of complex interactions over time, can allow anyone to make sensible judgments about ecological issues--even in the face of a barrage of confusing expertise. "Filters Against Folly offers an antidote to some of the more perverse and dangerous irrationalities of our time: wishful self-delusion, educated incapacity, and foolhardy optimism...If ever this book were needed, it is needed today." -- Lynton K. Caldwell, School of Public Environmental Affairs, Indiana University
International and Interdisciplinary Perspectives Hoover Press
An Introduction to Population Geographies provides a foundation to the incredibly diverse, topical and interesting field of twenty-first-century population geography. It establishes the substantive concerns of the subdiscipline, acknowledges the sheer diversity of its approaches, key concepts and theories and engages with the resulting major areas of academic debate that stem from this richness. Written in an accessible style and assuming little prior knowledge of topics covered, yet drawing on a wide range of diverse academic literature, the book's particular originality comes from its extended definition of population geography that locates it firmly within the multiple geographies of the life course. Consequently, issues such as childhood and adulthood, family dynamics, ageing, everyday mobilities, morbidity and differential ability assume a prominent place alongside the classic population

geography triumvirate of births, migrations and deaths. This broader framing of the field allows the book to address more holistically aspects of lives across space often provided little attention in current textbooks. Particular note is given to how these lives are shaped though hybrid social, biological and individual arenas of differential life course experience. By engaging with traditional quantitative perspectives and newer qualitative insights, the authors engage students from the quantitative macro scale of population to the micro individual scale. Aimed at higher-level undergraduate and graduate students, this introductory text provides a well-developed pedagogy, including case studies that illustrate theory, concepts and issues.

Conflicting Views Of An Essential Interrelationship Stanford University Press

Contemporary Moral Issues is an anthology that provides a selection of readings on contemporary social issues revolving around three general themes: Matters of Life and Death, Matters of Equality and Diversity, and Expanding the Circle, which includes duties beyond borders, living together with animals, and environmental ethics. The text contains a number of distinctive, high-profile readings and powerful narratives, including Jonathan Foer's "Eating Animals," Eva Feder Kittay's "On the Ethics of Selective Abortion for Disability," and Susan M. Wolf's "Confronting Assisted Suicide and Euthanasia: My Father's Death." Each set of readings is accompanied by an extensive introduction, a bibliographical essay, pre-reading questions, and discussion questions.

The Limits of Altruism Routledge
Former Members of Parliament from Canada's House of Commons discuss their political careers and Canadian politics in general is examined.

The Commons: Its Tragedies and Other Follies Routledge

Providing care to the sick is one of the

most universal labours that exists across human societies. How do we understand the work that goes into this vital collective task? How do we arrange different forms of caregiving labour? How do we decide what forms of labour remain informal and unregulated, while others remains more controlled and institutionalised? What has led to the way we prioritise and the way we value caregiving labour types? This work explores the forms of labour – from the cognitive to the emotional, from the physical to the administrative – that go into contemporary healthcare, tracing the lineage of the hierarchies that have developed in alliance or complicity with state and capital. Through analysing the repercussions of these relationships on the care of the sick, the book questions the role of coercion and extraction in health work, and poses an argument for a more liberatory future for caregiving labour.

Plunder of the Commons Oxford University Press on Demand

Introduction by Salvatore Engel-Di Mauro

Foreword by Ariel Salleh This book takes as its object of critique one of the best known and most influential arguments in contemporary applied ethics which is biologist Garrett Hardin's case for "lifeboat ethics." John Clark analyzes the moral dimensions of world hunger, foreign aid, immigration policy, and population growth. Clark critiques the "lifeboat ethics" as a way to explore in depth both the common and the commons. It is about the truth we hold in common, and about certain falsehoods that we hold in common. This book also contains Garrett Hardin's 1974 essay "Living on a Lifeboat"

Two Lectures on the Checks to Population Vintage Canada

An objective, comprehensive, and accessible examination of today's most crucial problem: preserving the environment in the face of society's insatiable demand for energy. In *Energy at the Crossroads*, Vaclav Smil considers the twenty-first century's crucial question: how to reconcile the modern world's unceasing demand for energy with the absolute necessity to preserve the integrity of the biosphere. With this book he offers a comprehensive, accessible guide to today's complex energy issues—how to think clearly and logically about what is possible and what is desirable in our energy future. After a century of unprecedented production growth, technical innovation, and

expanded consumption, the world faces a number of critical energy challenges arising from unequal resource distribution, changing demand patterns, and environmental limitations. The fundamental message of *Energy at the Crossroads* is that our dependence on fossil fuels must be reduced not because of any imminent resource shortages but because the widespread burning of oil, coal, and natural gas damages the biosphere and presents increasing economic and security problems as the world relies on more expensive supplies and Middle Eastern crude oil. Smil begins with an overview of the twentieth century's long-term trends and achievements in energy production. He then discusses energy prices, the real cost of energy, and "energy linkages"—the effect energy issues have on the economy, on quality of life, on the environment, and in wartime. He discusses the pitfalls of forecasting, giving many examples of failed predictions and showing that unexpected events can disprove complex models. And he examines the pros and cons not only of fossil fuels but also of alternative fuels such as hydroenergy, biomass energy, wind power, and solar power. Finally, he considers the future, focusing on what really matters, what works, what is realistic, and which outcomes are most desirable.
