This text-workbook is a streamlined, no-nonsense approach to business communication. It takes a three-in-one approach: (1) text, (2) practical workbook, and (3) self-teaching grammar/mechanics handbook. The chapters reinforce basic writing skills, then apply these skills to a variety of memos, letters, reports, and resumes. This new edition features increased coverage of contemporary business communication issues including oral communication, electronic forms of communication, diversity and ethics.

During the last decades, research on spinal cord has attracted a great deal of attention because of problems such as sensory-motor and autonomic dysfunctions associated with traumatic and other injuries. Recording of spinal cord evoked potentials is one of the most promising approaches to understand the spinal cord function. However, the details of the evoked potentials and their significance in various pathological conditions are not yet fully characterized. This book summarizes new findings in the field of electrophysiology and relates this knowledge to pathology and regeneration research. It is the first one which deals in great detail with various ways to monitor spinal cord function in experimental and clinical situations. It

provides an up-to-date knowledge regarding spinal cord bioelectrical activity and its modification with pharmacological agents and covers new aspects of regeneration studies, particularly the role of myelin associated inhibitory molecules. A section is devoted to clinical studies dealing with electrical activity, pathology, and current therapeutic measures. This volume will be useful both to basic and clinical neuroscientists engaged in the field of neurology, neurophysiology, neurochemistry, neurosurgery, neuropathology, and related disciplines in order to understand basic functions of the spinal cord and to stimulate further research in this rapidly advancing field.

"Should have broad appeal in many kinds of industry, ranging from automotive to computers—basically any organization concerned with products having moving parts!" —David A. Rigney, Materials Science and Engineering Department, Ohio State University, Columbus, USA In-Depth Coverage of Frictional Concepts Friction affects so many aspects of daily life that most take it for granted. Arguably, mankind's attempt to control friction dates back to the invention of the wheel. Friction Science and Technology: From Concepts to Applications, Second Edition presents a broad, multidisciplinary overview of the constantly moving field of friction, spanning the history of friction studies to the evolution of measurement instruments. It reviews the gamut of friction test methods, ranging from simple inclined plans to sophisticated laboratory tribometers. The book starts with introductory concepts about friction and progressively delves into the more subtle fundamentals of surface contact, use of various lubricants, and specific applications such as brakes, piston rings, and machine components. Includes American Society of Testing and Management (ASTM) Standards This volume covers

multiple facets of friction, with numerous interesting and unusual examples of friction-related technologies not found in other tribology books. These include: Friction in winter sports Friction of touch and human skin Friction of footwear and biomaterials Friction drilling of metals Friction of tires and road surfaces Describing the tools of the trade for friction research, this edition enables engineers to purchase or build their own devices. It also discusses frictional behavior of a wide range of materials, coatings, and surface treatments, both traditional and advanced, such as thermally oxidized titanium alloys, nanocomposites, ultra-low friction films, laser-dimpled ceramics, and carbon composites. Even after centuries of study, friction continues to conceal its subtle origins, especially in practical engineering situations in which surfaces are exposed to complex and changing environments. Authored by a field specialist with more than 30 years of experience, this one-stop resource discusses all aspects of friction, from its humble beginnings to its broad application for modern engineers.

Temporomandibular disorders (TMDs), are a set of more than 30 health disorders associated with both the temporomandibular joints and the muscles and tissues of the jaw. TMDs have a range of causes and often co-occur with a number of overlapping medical conditions, including headaches, fibromyalgia, back pain and irritable bowel syndrome. TMDs can be transient or long-lasting and may be associated with problems that range from an occasional click of the jaw to severe chronic pain involving the entire orofacial region. Everyday activities, including eating and talking, are often difficult for people with TMDs, and many of them suffer with severe chronic pain due to this condition. Common social activities that most people take for granted, such as smiling, laughing, and kissing, can become unbearable. This dysfunction and pain, and its associated suffering, take a terrible toll on affected individuals, their families, and their friends. Individuals with TMDs often feel stigmatized and invalidated in their experiences by their family, friends, and, often, the health care community. Misjudgments and a failure to understand the nature and depths of TMDs can have severe consequences - more pain and more suffering - for individuals, their families and our society. *Temporomandibular Disorders: Priorities for Research and Care* calls on a number of stakeholders - across medicine, dentistry, and other fields - to improve the health and well-being of individuals with a TMD. This report addresses the current state of knowledge regarding TMD research, education and training, safety and efficacy of clinical treatments of TMDs, and burden and costs associated with TMDs. The recommendations of *Temporomandibular Disorders* focus on the actions that many organizations and agencies should take to improve TMD research and care and improve the overall health and well-being of individuals with a TMD.

This book is a comprehensive, theoretical, practical, and thorough guide to XAFS spectroscopy. The book addresses XAFS fundamentals such as experiments, theory and data analysis, advanced XAFS methods such as operando XAFS, time-resolved XAFS, spatially resolved XAFS, total-reflection XAFS, high energy resolution XAFS, and practical applications to a variety of catalysts, nanomaterials and surfaces. This book is accessible to a broad audience in academia and industry, and will be a useful guide for researchers entering the subject and graduate students in a wide variety of disciplines.

*Lifting the Veil* is a bold and irreverent collection of writing from India's most controversial feminist writer. These stories celebrate life in all its complexities- from a woman who refuses marriage to a man she loves to preserve her freedom, to a Hindu and a Muslim teenager pulled apart by societal pressures, to eye-opening personal accounts of the charges of obscenity the author faced in court for pieces in this book. Wickedly funny and unflinchingly honest, *Lifting the Veil* explores the power of female sexuality while slyly mocking the subtle tyrannies of middle-class life. In 1940s India, an unlikely setting for female rebellion, Ismat Chughtai was a rare and radical storyteller born years ahead of her time.

How can today's workforce keep pace with an increasingly competitive global economy? As new technologies rapidly transform the workplace, employee requirements are changing and workers must adapt to different working conditions. This volume compares new evidence on the returns from worker training in the United States, Germany, France, Britain, Japan, Norway, and the Netherlands. The authors focus on Germany's widespread, formal apprenticeship programs; the U.S. system of learning-by-doing; Japan's low employee turnover and extensive company training; and Britain's government-led and school-based training schemes. The evidence shows that, overall, training in the workplace is more effective than training in schools. Moreover, even when U.S. firms spend as much on training as other countries do, their employees may still be less skilled than workers in Europe or Japan. *Training and the Private Sector* points to training programs in Germany, Japan, and other developed countries as models for creating a workforce in the United States that can compete more successfully in today's economy.

Due to a great chemical similarity with the biological calcified tissues, many calcium orthophosphates possess remarkable biocompatibility and bioactivity. Materials scientists use this property extensively to construct artificial bone grafts that are either entirely made of or only surface-coated with the biologically relevant calcium orthophosphates. Porous scaffolds made of calcium orthophosphates are very promising tools for tissue engineering applications. A comprehensive overview of calcium orthophosphates, this book highlights their importance and biomedical uses.

The need for enterprise flexibility in an era of rapidly advancing technology, increasing competition, and globalization, is apparent. Flexibility can be thought of as an ability of the enterprise to quickly and efficiently respond to market changes and to bring new products and services quickly to the market place. Beyond this definition, a truly flexible enterprise should proactively change the market through its ability to create new and innovative products and services. The proposed book is intended to provide a conceptual framework of 'Flexible Enterprise' supported by researches/case applications in various types of flexibilities exhibited by a flexible enterprise. The selected papers from a variety of issues concerning the planning and operation of a flexible enterprise are organized into following four parts: I Enterprise and Strategic Flexibility II Organizational Flexibility III Business Process and Information Systems Flexibility IV Operations Flexibility

This third volume continues to set the standard in the field, as originally defined by the best-selling two-volume set *Intermetallic Compounds: Principles and Practice*. With contributions from 72 authors from 14 different countries, this book introduces a broad range of new topics including: new intermetallic families, new means of assessment of bonding and stability, new properties and phenomena, new applications, new practical processes and new research techniques. Stand-alone chapters set out in a manner that is meaningful to non-specialists, progressing to include knowledge useful to experts New, fully revised, and updated chapters on areas of intense research activity or great importance Providing definitions of intermetallic families, intended to assist all readers Written for clarity, consistency and thoroughness Full and up-to-date referencing to the literature Critical assessments of the state of the subject Acronym list consolidating new entries with those compiled for the two earlier volumes As with Volumes 1 and 2, this is an invaluable aid to both scientists and engineers. Core reading for those who are starting research on intermetallics, and for those who wish to exploit the unique properties of intermetallics in practical applications.

In the early 21st century, marketing is 'under fire' as never before. Its nature and contribution to business performance are under serious scrutiny by practitioners and theorists. Surely metaphors are more widely known in literature? Do they apply in marketing? Metaphors are widely used within marketing literature, yet are hardly ever identified as metaphorical in nature. This text aims to redress this omission. For example, such widely known topics as the marketing mix, globalization of markets, market segmentation, viral marketing, the product life cycle, and many others are in fact metaphors. Applied literally, as straightforward market management tools, they not only are hostage to fortune, but can seriously damage brand, product, and indeed company performance. Moreover, marketing itself may be a metaphor - apparently underlying or overarching many exchanges and relationships. Perhaps marketing is changing, or metamorphosing into something else, as yet undefined, but resonant with possibilities.--

A laboratory manual detailing the procedures for the preparation and application of a group of highly specific reagents, and how to overcome the many problems associated with their use. Also includes a historical overview of organocopper chemistry; a description of starting material purification; and guidelines to the reaction, which are usually characterized by a high chemo-, regio-, and stereoselectivity. Begins a series providing practical and accessible laboratory guides for new and experienced researchers unfamiliar with the particular area. Annotation copyright by Book News, Inc., Portland, OR

This book features high-quality research papers presented at the 4th International Conference on Advanced Computing and Intelligent Engineering (ICACIE 2019), Department of Computer Science, Rama Devi Women's University, Bhubaneswar, Odisha, India. It includes sections describing technical advances and contemporary research in the fields of advanced computing and intelligent engineering, which are based on the presented articles. Intended for postgraduate students and researchers working in the discipline of computer science and engineering, the book also appeals to researchers in the domain of electronics as it covers hardware technologies and future communication technologies.

A politically polarized America is coming together over a new kind of car--the plug-in hybrid that will save drivers money, reduce pollution, and increase US security by reducing dependence on imported oil. *Plug-in Hybrids* points out that, where hydrogen fuel-cell cars won't be ready for decades, the technology for plug-in hybrids exists today. Unlike conventional hybrid cars that can't run without gasoline, plug-in hybrids use gasoline or cheaper, cleaner, domestic electricity--or both. Although plug-in hybrids are not yet for sale, demand for them is widespread, coming from characters across the political spectrum, such as: \* Chelsea Sexton, the automotive insider: working for General Motors, Sexton fought attempts to destroy the all-electric EV1 car and describes how car companies are resisting plug-in hybrids--and why they'll make them -anyway. \* Felix Kramer and the tech squad: Kramer started a nonprofit organization using the Internet to tap into a small army of engineers who built the first plug-in Prio hybrids. \* R. James Woolsey, former CIA director and national security hawk: seeing the end of oil supplies looming, Woolsey is demanding plug-in hybrids to wean us from petroleum. Cautioning that the oil and auto companies know how to undermine the success of plug-in car programs to protect their interests, the book gives readers tools to ensure that plug-in hybrids get to market--and stay here.

The female musicians of the Instituto della Piet play from a gallery in the church, their faces half hidden by metal grilles. They live segregated from the world. Cecilia, is a violinist who, during anguished, sleepless nights, writes letters to the mother she never knew, haunted by her and hating her by turns. She eats little and cannot sleep. But things begin to change when a new violin teacher arrives at the institute. The astonishing music of Vivaldi, the 'Red Priest', electrifies her and changes her attitude to life, compelling her to make a courageous choice.

The present series, "Bioorganic Marine Chemistry, " is being launched at a time when we have the fundamental knowledge and the requisite instrumentation to probe the molecular basis of many biological phenomena. Worldwide interest in the organic chemistry of marine plants and animals was stimulated in the late 1960's through conferences, publications, and a singular event - the discovery of prostaglandins in a gorgonian coral. The study of marine natural products remains firmly anchored in chemistry, i.e., in molecular integrity, yet continues to seek greater involvement in functional biology. Involvement with biology started on three fronts simultaneously: a study of chemical interactions occurring in the

marine habitat, i.e., marine ecology; a search for meaningful and appropriate bioassays designed to guide isolation and to predict the nature and degree of biological activity, and finally, a delineation of biological activity that might lead to application in medicine or agriculture. The scope of this series is the entire domain of marine bioorganic chemistry - ecology, pharmacology, biosynthesis, molecular structure, laboratory synthesis. Marine biologists, pharmacologists, organic and medicinal chemists will be the prime audience. The level of the reviews will be geared to researchers and graduate students in biology, chemistry and biomedicine. Complete documentation will allow ready entry into the primary literature. The book contains the following four contributions: V.J. Paul, W. Fenical: Natural Products Chemistry and Chemical Defense in Tropical Marine Algae of the Phylum Chlorophyta. P. Karuso: Chemical Ecology of the Nudibranchs. N. Fusetani: Marine Metabolites Which Inhibit Development of Echinoderm Embryos. M.H.G. Munro, R.T. Luibrand, J.W. Blunt: The Search for Antiviral and Anticancer Compounds from Marine Organisms.

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.
