The Fulcrum Springer

In this monograph, the authors present their recently developed theory of electromagnetic interactions. This neoclassical approach extends the classical electromagnetic theory down to atomic scales and allows the explanation of various non-classical phenomena in the same framework. While the classical Maxwell-Lorentz electromagnetism theory succeeds in describing the physical reality at macroscopic scales, it struggles at atomic scales. Here, quantum mechanics traditionally takes over to describe non-classical phenomena such as the hydrogen spectrum and de Broglie waves. By means of modifying the classical theory, the approach presented here is able to consistently explain quantum-mechanical effects, and while similar to quantum mechanics in some respects, this neoclassical theory also differs markedly from it. In particular, the newly developed framework omits probabilistic interpretations of the wave function and features a new fundamental spatial scale which, at the size of the free electron, is much larger than the classical electron radius and is relevant to plasmonics and emission physics. This book will appeal to researchers interested in advanced aspects of electromagnetic theory. Treating the classical approach in detail, including non-relativistic aspects and the Lagrangian framework, and comparing the neoclassical theory with quantum mechanics and the de Broglie-Bohm theory, this work is completely self-contained.

The terrorists responsible for the Madrid train bombings on March 11, 2004, succeeded in killing 193 innocent civilians and injuring scores more. The bombings changed the outcome of the Spanish

election which took place three days later. What the terrorists didn't know, but were to find out in due time, was that on that fateful day they have also succeeded in creating their worst nightmare. Although none of them had an idea who he was, what he looked like, where he came from, and who he worked for. He was a sniper who could take a target out at eight-hundred yards to a mile. He could kill with a long gun, short gun, or no gun. He was lethal with edged weapons, explosives, poisons, or no weapon at all. Targets could be taken out from a mile away or die with his breath in their faces. Among his enemies, he went by names which sent ice-cold shivers down their spines. El Gato, the cat in Spanish, Alshaytan, the Devil in Arabic, the Ghost, and many others. His real name was Rex Dalton. He had no friends. He had no family. He had no girl. He had only one motto; don't hate the terrorists - it will kill you. Instead kill them, so they can't kill again. *THE FULCRUM* is a full-length novel, a nail-biting thriller by best-selling author JC Ryan. It is the first book in the electrifying new Rex Dalton series.
