A business history of the software industry from the days of custom programming to the age of mass-market software and video games. From its first glimmerings in the 1950s, the software industry has evolved to become the fourth largest industrial sector of the US economy. Starting with a handful of software contractors who produced specialized programs for the few existing machines, the industry grew to include producers of corporate software packages and then makers of mass-market products and recreational software. This book tells the story of each of these types of firm, focusing on the products they developed, the business models they followed, and the markets they served. By describing the breadth of this industry, Martin Campbell-Kelly corrects the popular misconception that one firm is at the center of the software universe. He also tells the story of lucrative software products such as IBM's CICS and SAP's R/3, which, though little known to the general public, lie at the heart of today's information infrastructure. With its wealth of industry data and its thoughtful judgments, this book will become a starting point for all future investigations of this fundamental component of computer history.

Human factors considerations are increasingly being incorporated into the product design process. Users are seen more as being important factors in the overall look and usability of products than just as passive users. We are now treated as cognitive and physical components of the person/product system. The author, who is one of the leading lights in the field of cognitive ergonomics, looks at approaches that assume that if a task can be accomplished with a reasonable degree of efficiency and within acceptable levels of comfort, then the product can be seen as fitting to the user. In this book it is argued that in practice these approaches can be dehumanizing. People are more than merely physical and cognitive processors. They have hopes, fears, dreams, values and aspirations, indeed these are the very things that make us human. Designing Pleasurable Products looks both at and beyond usability, considering how products can appeal to use holistically, leading to products that are a joy to own.
