Power Engineering Springer Nature

The academic biomedical research community is a hub of employment, economic productivity, and scientific progress. Academic research institutions are drivers of economic development in their local and state economies and, by extension, the national economy. Beyond the economic input that the academic biomedical research community both receives and provides, it generates knowledge that in turn affects society in myriad ways. The United States has experienced and continues to face the threat of disasters, and, like all entities, the academic

biomedical research community can be affected. Recent disasters, from hurricanes to cyber-attacks, and their consequences have shown that the investments of the federal government and of the many other entities that sponsor academic research are not uniformly secure. First and foremost, events that damage biomedical laboratories and the institutions that house them can have impacts on the safety and well-being of humans and research animals. Furthermore, disasters can affect career trajectories, scientific progress, and financial stability at the individual and institutional levels. Strengthening the Disaster Resilience of the Academic Biomedical Research Community offers recommendations and guidance to enhance the disaster resilience of the academic biomedical research community, with a special focus on the potential actions

researchers, academic research institutions, and research sponsors can take to mitigate the impact of future disasters. [Aging Power Delivery Infrastructures](#) John Wiley & Sons
The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.--Publisher's description.

Equipment Inventories for Owners and Facility Managers Springer Nature

In *Structural Condition Assessment*, editor-in-chief Robert T. Ratay gathers together the leading people in the field to produce the first unified resource on all aspects of structural condition assessment for strength, serviceability, restoration, adaptive reuse, code compliance, and vulnerability. Organized by the four main stages of a structural evaluation, this book provides an introduction to structural deterioration and its consequences, the business and legal aspects of conducting an evaluation, initial survey and evaluation techniques for various structures, and specific tests for five of the most common structural materials (concrete, steel, masonry, timber and fabric.)

Aging Power Delivery Infrastructures, Second Edition

Springer Science & Business Media

This book constitutes the thoroughly refereed proceedings of the 3rd International Conference on IoT as a service, IoTaaS 2017, held in Taichung, Taiwan, in September 2017. The 46 full papers were carefully selected from 65 submissions. The papers deal with the "Everything as a Service" deployment paradigm which enables the easy adoption of IoT based services and applications by end-users, and forces providers of smart objects and middleware platforms to architect their solutions accordingly. The three special sessions organized were Wearable Technology and Applications (WTAA), Building Smart Machine Applications (BSMA), and Security and Privacy in Internet of Things, Services and People (SP-IoTSP). The WTAA special session aimed to address the challenges of maintaining high efficiency of WTAA in terms of high recognition rate, energy consumption, computational costs and so forth. The BSMA special session aimed to explore how to construct smart machines architecture for the industry under the background of IoT and big data. The SP-IoTSP special session aimed to investigate recent research and future directions for IoTSP security and privacy.

Software Engineering and Knowledge Engineering: Theory and Practice John Wiley & Sons

Any structural system in service is subject to age-related deterioration, leading to potential concerns regarding maintenance, health & safety, environmental and economic implications. Condition assessment of aged structures is an invaluable, single source of information on structural assessment techniques for marine and land-based structures such as ships, offshore installations, industrial plant and buildings. Topics

covered include: - Current practices and standards for structural condition assessment - Fundamental mechanisms and advanced mathematical methods for predicting structural deterioration - Residual strength assessment of deteriorated structures - Inspection and maintenance of aged structures - Reliability and risk assessment of aged structures Professionals from a broad range of disciplines will be able to gain a better understanding of current practices and standards for structural condition assessment or health monitoring, and what future trends might be. Single source of information on structural assessment techniques for marine and land-based structures Examines the residual strength and reliability of aged structures Assesses current practices covering inspection, health monitoring and maintenance

Facility Inspection Field Manual: A Complete Condition Assessment Guide CRC Press

This book constitutes the thoroughly refereed post-conference proceedings of the First International ICST Conference on Wireless Communications and Applications, ICWCA 2011, held in Sanya, China, in August 2011. The 43 revised full papers presented were carefully reviewed and selected from around 90 submissions and cover a wide range of topics as mobile ad hoc networks, sensor networks, network architectural design, network protocol design, local area networks, MAC, routing, and transport protocols, quality of service provisioning, reliability and fault tolerance issues, resource allocation and management, signal processing, medical imaging, data aggregation techniques, security and privacy issues, wireless computing and applications for wireless network as smart grid, agriculture, health care, smart

home, conditional monitoring, etc.

Root Cause Failure Analysis Springer

Information Technology and Career Education contains the contributions presented at the 2014 International Conference on Information Technology and Career Education (ICITCE 2014, Hong Kong, China, 9-10 October 2014). The book is divided into two main topics: information technology and vocational technology. Considerable attention is also paid to el Smart Grid and Innovative Frontiers in Telecommunications John Wiley & Sons

This book comprises refereed papers from the 10th World Congress on Engineering Asset Management (WCEAM 2015), held in Tampere, Finland in September 2015. These proceedings include a compilation of state-of-the-art papers covering a comprehensive range of subjects equally relevant to business managers and engineering professionals alike. With a focus on various aspects of engineering asset management ranging from strategic level issues to detail-level machine health issues, these papers address both industry and public sector concerns and issues, as well as advanced academic research. Proceedings of the WCEAM 2015 is an excellent reference and resource for asset management practitioners, researchers and academics, as well as undergraduate and postgraduate students at tertiary institutions or in the industry.

Guidelines for Mechanical Integrity Systems BoD – Books on Demand

“This is the second in a series of three volumes of proceedings of the 23rd Pacific Basin Nuclear Conference (PBNC 2022) which was held by Chinese Nuclear Society. As one in the most

important and influential conference series of nuclear science and technology, the 23rd PBNC was held in Beijing and Chengdu, China in 2022 with the theme “Nuclear Innovation for Zero-carbon Future”. For taking solid steps toward the goals of achieving peak carbon emissions and carbon neutrality, future-oriented nuclear energy should be developed in an innovative way for meeting global energy demands and coordinating the deployment mechanism. It brought together outstanding nuclear scientists and technical experts, senior industry executives, senior government officials and international energy organization leaders from all across the world. The proceedings highlight the latest scientific, technological and industrial advances in Nuclear Safety and Security, Operations and Maintenance, New Builds, Waste Management, Spent Fuel, Decommissioning, Supply Capability and Quality Management, Fuel Cycles, Digital Reactor and New Technology, Innovative Reactors and New Applications, Irradiation Effects, Public Acceptance and Education, Economics, Medical and Biological Applications, and also the student program that intends to raise students’ awareness in fully engaging in this career and keep them updated on the current situation and future trends. These proceedings are not only a good summary of the frontiers in nuclear science and technology, but also a useful guideline for the researchers, engineers and graduate students. [Information Technology and Career Education](#) ASTM International Root Cause Failure Analysis Provides the knowledge and failure analysis skills necessary for preventing and investigating process equipment failures Process equipment and piping systems are essential for plant availability and performance. Regularly exposed to hazardous service conditions and damage

mechanisms, these critical plant assets can result in major failures if not effectively monitored and assessed—potentially causing serious injuries and significant business losses. When used proactively, Root Cause Failure Analysis (RCFA) helps reliability engineers inspect the process equipment and piping system before any abnormal conditions occur. RCFA is equally important after a failure happens: it determines the impact of a failure, helps control the resultant damage, and identifies the steps for preventing future problems. Root Cause Failure Analysis: A Guide to Improve Plant Reliability offers readers clear understanding of degradation mechanisms of process equipment and the concepts needed to perform industrial RCFA investigations. This comprehensive resource describes the methodology of RCFA and provides multiple techniques and industry practices for identifying, predicting, and evaluating equipment failures. Divided into two parts, the text first introduces Root Cause Analysis, explains the failure analysis process, and discusses the management of both human and latent error. The second part focuses on failure analysis of various components such as bolted joints, mechanical seals, steam traps, gearboxes, bearings, couplings, pumps, and compressors. This authoritative volume: Illustrates how failures are associated with part integrity, a complete system, or the execution of an engineering process Describes how proper design, operation, and maintenance of the equipment help to enhance their reliability Covers analysis techniques and industry practices including 5-Why RCFA, fault tree analysis, Pareto charts, and Ishikawa diagrams Features a detailed case study of process plant machinery and a chapter on proactive measures for

avoiding failures Bridging the gap between engineering education and practical application, *Root Cause Failure Analysis: A Guide to Improve Plant Reliability* is an important reference and guide for industrial professionals, including process plant engineers, planning managers, operation and maintenance engineers, process designers, chemical engineers, and instrument engineers. It is also a valuable text for researchers, instructors, and students in relevant areas of engineering and science.

Sustainable Manufacturing Springer Science & Business Media
How to use industry standards to create complete, consistent, and accurate equipment inventories The National Institute of Science and Technology estimates that the loss of information between the construction of buildings and their operation and maintenance costs facility owners \$15.8 billion every year. This phenomenal loss is caused by inconsistent standards for capturing information about facilities and their equipment. In *Equipment Inventories for Owners and Facility Managers*, Robert Keady draws on his twenty+ years of experience in facility management and his intimate knowledge of CSI classification systems and standards to tackle this problem head-on. Using standards already in use in the AEC industry, he provides the road map for capturing everything owners and facility managers need to know to operate and maintain any facility. This comprehensive, step-by-step guide: Explains the different types of equipment inventories and why they are important Identifies and describes the types of information that should be captured in an equipment inventory Describes and compares the different industry standards (CSI OmniClass and UniFormat ; COBie; and SPie) that can be used for equipment inventories Provides best

practices for identifying and tagging equipment Walks through the equipment inventory process with real-world examples and best practices Provides the tools for conducting the equipment inventory tables of all the possible information and data that need to be collected, and fifty maps of workflows that can be used to capture that data immediately

Computational Social Science Elsevier

Intended for inspectors and engineers in the refining, petrochemical, and process industries. Includes material such as methods for inspecting process operations equipment, a diagrammatic cross-reference between processes and corrosion, a philosophy on metals selection for the construction of equipm

IoT as a Service CRC Press

This book offers a broad overview of asset management processes for different utilities, with a special emphasis on energy and water. It provides readers with important practical considerations concerning the development of new competitive structures and procedures for guaranteeing a sufficient supply of energy and water in a regulated environment, using clearly defined technical and economic cornerstones. On the one hand, asset owners expect suitable interests from their investment and business growth; on the other hand, regulators focus more on a reliable and cost-effective customer supply. This book shows how to take into consideration these different perspectives in the process of designing new structures, and how to guarantee organizational transparency. It describes essential principles and boundary conditions for ensuring the optimal use of resources in a network, covering issues relating to equipment service life, IT landscape and computer programs, operational costs

management, and investment and maintenance strategies, highlighting their impact on the organization of the company. This thoroughly revised and updated second edition, includes extensive information about IEC standard (IEC/TS 63060), and cover operation research methods focusing on the optimization of the maintenance tasks. Furthermore, a discussion on the political environment has been included, with a special emphasis on the European situation and the “Green Deal”: specifically, some measures to cope with the topic of energy transition are presented. Last, but not least, a brand-new chapter on condition assessment has been included.

Self-healing Control Technology for Distribution Networks IET

The U.S. Customs and Border Protection (CBP) FY 2009 Performance and Accountability Report (PAR) is a comprehensive report that combines CBP’s Annual Performance Report with its audited financial statements, assurances on internal control, accountability reporting and agency assessments. CBP’s PAR provides financial and performance information that enables Congress and the public to assess the performance of the agency as it relates to the CBP mission. CBP is America’s frontline border agency; it guards our boundaries. The CBP PAR discusses the agency’s strategic goals and objectives and provides a comparison of agency performance targets to actual performance results. Illustrations.

Springer Nature

The National Institutes of Health (NIH) is the primary agency of

the United States government responsible for biomedical and public health research. Founded in the late 1870s, NIH has produced extraordinary advances in the treatment of common and rare diseases and leads the world in biomedical research. It is a critical national resource that plays an important role in supporting national security. The 310-acre Bethesda campus supports some 20,000 employees and contractors, and it contains more than 12 million square feet of facilities divided amongst nearly 100 buildings, including the largest dedicated research hospital in the world. The Bethesda campus supports some of the most sophisticated and groundbreaking biomedical research in the world. However, while some new state-of-the-art buildings have been constructed in recent years, essential maintenance for many facilities and the campus overall has been consistently deferred for many years. The deteriorating condition of NIH’s built environment is now putting its ability to fulfill its mission at substantial risk. Managing the NIH Bethesda Campus’s Capital Assets for Success in a Highly Competitive Global Biomedical Research Environment identifies the facilities in greatest need of repair on the Bethesda campus and evaluates cost estimates to determine what investment is needed for the NIH to successfully accomplish its mission going forward.

Wireless Communications and Applications John Wiley & Sons
Accurately Assess the Physical Condition of Property for Commercial Real Estate Transactions! Turn to Property Condition Assessments for comprehensive guidance on accurately collecting, analyzing, and reporting data on the physical condition of property for commercial real estate transactions. This definitive resource provides expert information for evaluating the

quality of construction, integrity of building systems, and other critical components. This hands-on reference discusses the latest industry standards and explains how to appraise structural, roofing, mechanical, plumbing, electrical, lighting, and interior systems ...rate the condition of existing equipment and components...establish estimated costs for correcting physical deficiencies...uncover maintenance problems...and more. The book also shows you how to incorporate and set up a corporate website, seize business opportunities in the booming property assessment field and maximize returns. Filled with over 250 detailed illustrations, *Property Condition Assessments* features: Guidelines for identifying defects, deficiencies, items of deferred maintenance, and code violations Insights into litigation, dispute resolution, and expert testimony Business-building advice on presentations, marketing, and setting up an office and website Sample reports, forms, templates and letters - all needed for a successful career in this industry

Fish Field and Laboratory Methods for Evaluating the Biological Integrity of Surface Waters DIANE Publishing

Good aging infrastructure management consists of optimizing the choice of equipment and its refurbishment while also making compatible changes in all those operating and ownership policies, the whole combination aimed at optimizing the business results the power system owner desires. Both a reference and tutorial

guide, this second edition of *Aging Power Delivery Infrastructures* provides updated coverage of aging power delivery systems, the problems they cause, and the technical and managerial approaches that power systems owners can take to manage them. See *What's New in the Second Edition*: All chapters have been updated or are completely new Comprehensive discussions of all issues related to equipment aging Business impact analysis and models and engineering business studies of actual utility cases Strategy and policy issues and how to frame and customize them for specific situations This book looks at the basics of equipment aging and its system and business impacts on utilities. It covers various maintenance, service and retrofit methods available to mitigate age-related deterioration of equipment. It also presents numerous configuration and automation upgrades at the system level that can deal with higher portions of aging equipment in the system and still provide good service at a reasonable cost.

Valves, Pipework and Associated Equipment in Dams McGraw Hill Professional

The guide sets out a logical step-by-step process for condition assessment, involving location, inspection, monitoring, evaluation of results and remedial measures.

Condition Assessment of High Voltage Insulation in Power System Equipment ASM International

"Illustrates state-of-the-art planning, design, operational, and managerial methods. Demonstrates novel approaches to utilizing resources in an aging electric power delivery infrastructure-maximizing system effectiveness and maintaining competitive financial performance while reinforcing good customer service."

Proceedings of the 12th International Conference on Computer Engineering and Networks National Academies Press
This book covers major components of a high voltage system and the different insulating materials applied in equipment,

identifying measurable materials suitable for condition assessment, and also analyses insulation fault scenarios that may occur in power equipment.
