Mathematical probability theory is especially interesting to scientists and engineers. It introduces probability theory, showing how probability problems can be formulated mathematically to systematically attack routine methods. Topics include independence and dependence, probability laws and random variables. Over 500 exercises, an appendix of useful tables and answers to odd-numbered questions are also included.

In 1962, a newly-minted college graduate answered the call of President John F. Kennedy and joined the fledgling Peace Corps. Leslie Noyes Mass was assigned to Pakistan and given the directive to start a program-any kind of educational program she could muster-in a small Muslim village where she was the only Westerner and the only Peace Corps volunteer. After a year, she left the village, frustrated and feeling that she had made no impact at all. Nearly 50 years later, she returned to discover a much-changed Pakistan-and a village that still remembers her. She tells both her stories, from 1962 and today, by deftly interweaving her journal entries from 50 years ago with her current day story as a volunteer training female teachers for a Pakistani non-governmental institution. Leslie Mass captures the heart and the attention of the reader with her story of Pakistanis in 1962 and those of a new generation who are engaged in building a sustainable education system for their country's forgotten children. In a series of interviews with Pakistanis from every social class and educational level, Dr. Mass gives voice to those who are taking responsibility for their country's educational

problems and solving these problems within the traditions, culture, and religious understanding of their people. Back to Pakistan: A Fifty-Year Journey is a compelling look into a country as it goes from its infancy into the 21st century.

Taxonomy of Prokaryotes, edited by two leading experts in the field, presents the most appropriate up-to-date experimental approaches in the detail required for modern microbiological research. Focusing on the methods most useful for the microbiologist interested in this specialty, this volume will be essential reading for all researchers working in microbiology, immunology, virology, mycology and parasitology. Methods in Microbiology is the most prestigious series devoted to techniques and methodology in the field. Established for over 30 years, Methods in Microbiology will continue to provide you with tried and tested, cutting-edge protocols to directly benefit your research.

Prepared by Jan William Simek, this manual provides detailed solutions to all in-chapter as well as end-of-chapter exercises in the text.

AMC Handbook of Clinical Assessment OUP Oxford

Created for the new 2015 OCR AS and A level specifications, our new Student Books cover the topics comprehensively, developing scientific thinking in your students, providing them with a deep understanding of the subject and creating confident, independent scientists.

A Visual Dictionary of Architecture OUP Oxford

This series builds on the fact that pictures are easier to memorize than words. Each topic is summarized on a single page using annotated diagrams and concise notes with a full index for easy reference. Expert authors have taken the content of the AS and A Level specifications and presented them
