**ACCCN's Critical Care Nursing - E-Book** Springer Science &  
Business Media

This book, part of the European Society of Intensive Care  
Medicine textbook series, teaches readers how to use  
hemodynamic monitoring, an essential skill for today's  
intensivists. It offers a valuable guide for beginners, as well as for  
experienced intensivists who want to hone their skills, helping

both groups detect an inadequacy of perfusion and make the  
right choices to achieve the main goal of hemodynamic  
monitoring in the critically ill, i.e., to correctly assess the  
cardiovascular system and its response to tissue oxygen  
demands. The book is divided into distinguished sections: from  
physiology to pathophysiology; clinical assessment and  
measurements; and clinical practice achievements including  
techniques, the basic goals in clinical practice as well as the more  
appropriate hemodynamic therapy to be applied in different  
conditions. All chapters use a learning-oriented style, with  
practical examples, key points and take home messages, helping

readers quickly absorb the content and, at the same time, apply what they have learned in the clinical setting. The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and state-of-the-art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care.

**Organisation and Management of Intensive Care** Springer Science & Business Media

This book is designed to present a comprehensive and state-of-the-art approach to all aspects of geriatric surgery within the broad confines of surgery in geriatrics including general surgery, neurosurgery, thoracic surgery, vascular surgery, cardiac surgery, surgical oncology, hepatobiliary and transplant surgery, plastic, colorectal, orthopedic, gynecologic, and urologic surgery. The text is split into four parts. The first part is organized under general considerations on the geriatric surgical patient and includes current trends in geriatric surgery, and a number of important general issues such as practical approaches to reversal of bleeding/anticoagulation, role of anesthetic concerns in advanced age, frailty index and measurements of physiological reserves, nutritional support in the elderly, quality of life in the elderly, drug use, and family involvement. Part two of the book focuses on surgery specific system-based problems in geriatric surgical patients. The third part addresses many other important aspects of geriatric surgery including palliative and end of life care for the elderly, religious issues and the elderly care surgery, elderly with mental health issues, and nursing care of elderly patients. The fourth and final part describes the need for geriatric surgical care education and the components that are essential for

the curriculum of current and future generations of students. Written by experts in the field, Surgical Decision Making in Geriatrics addresses patient selection, pre-operative considerations, technical conduct of the most common operations, and avoiding complications.

**Patient-Centred Acute Care Training : a ESICM multidisciplinary distance learning programme for intensive care training** Elsevier Health Sciences

The Update compiles the most recent, widespread developments of experimental and clinical research and practice in one comprehensive reference book. The chapters are written by well recognized experts in the field of intensive care and emergency medicine. It is addressed to every one involved in internal medicine, anesthesia, surgery, pediatrics, intensive care and emergency medicine.

Critical Care Medicine E-Book Springer

This book is a comprehensive guide to critical care medicine for postgraduate medical students. Presented in a case-based, question and answer format, the text begins with guidance on patient examination in the intensive care unit (ICU). Each of the following chapters covers a different disorder, from acute severe asthma, pulmonary embolism and septic shock, to traumatic brain injury, acute liver failure and much more. The book concludes with cases examining out-of-hospital cardiac arrest, brain death and organ donation, as well as end-of-life care in the ICU. A large selection of Objective Structured Clinical Examination (OSCE) practice questions are included to assist students in their preparation for examinations. Nearly 300 clinical photographs, illustrations and tables further enhance learning. Key points

Comprehensive guide to critical care medicine for postgraduates  
Presented in a case-based, question and answer format Includes numerous OSCE practice questions to help students prepare for examinations Highly illustrated with clinical photographs, diagrams and tables

Compelling Ethical Challenges in Critical Care and Emergency Medicine Springer-Verlag

A guide to "when to" and "what to" rather than "how to", this book provides evidence-based surgical reviews to provide credible answers to age-old surgical management questions. The management issues presented are oriented toward interventions and use evidence-based techniques to assess the safety and efficacy of new treatments and rehabilitative or preventative interventions. Each chapter is organised around the key questions essential to delineating the current status of evidence related to the subject reviewed. Publications from the past decade are cited that provide Level I and II evidence using the Oxford scale. Throughout Elective General Surgery, careful assessment of the validity of intervention studies and the strength of the evidence that they provide underlies the choices of cited publications. The information presented in this volume guides the scientific surgeon in providing state-of-the-art care and in optimizing the use of medical resources without losing sight of the need to address the unique needs of individual patients.

**Cottrell and Patel's Neuroanesthesia E-Book** Elsevier Health Sciences

This book identifies the various ethical challenges that arise in pediatric hematology/oncology and provides the necessary tools

to overcome these challenges. Aiming to expand upon and strengthen providers' knowledge and experience in pediatric health care ethical issues, the text positions providers to be beneficial resources to faculty, staff, patients, and families within their institution. It presents a multidisciplinary approach to sound ethical practices that is necessary to effectively care for these patients and their families. The book reviews the principles of ethical decision-making, the unique difficulties in using children as research subjects, common ethical conundrums involved in providing end-of-life care, and general moralities of professional practice. Written by experts in their fields, Ethical Issues in Pediatric Hematology/Oncology is an innovative and valuable resource for clinicians, practitioners, and trainees who work in the field of pediatric hematology/oncology.

A Comprehensive Multidisciplinary Approach Oxford University Press

Acute Care Nursing provides an accessible and practical overview of the role of the nurse in acute medical and surgical settings in the Australian and New Zealand context. Linking closely with the Australian 'Registered nurse standards for practice' and the New Zealand Competencies for Registered Nurses, this text equips students with foundational knowledge of the pathophysiology, treatment and legal and ethical issues associated with common acute conditions. Through the person-centred, collaborative care approach, students will also learn effective communication, decision-making and cultural competency skills that are essential for nurses in any practice context. Each chapter is enriched with pedagogical features designed to solidify understanding and promote critical thinking, including case studies, reflections, key

terms, review questions, research topics and further readings. Offering students a relevant and contemporary understanding of the acute care context, *Acute Care Nursing* is an essential companion that can be taken from the classroom into practice.

**Textbook of Critical Care E-Book** Elsevier Health Sciences Featuring new co-editor Piyush Patel, MD, the updated edition of Cottrell and Patel's *Neuroanesthesia* continues to serve as the definitive reference on this important field of medicine. Clinically oriented chapters are clearly organized and cover key clinical points, case presentations, and discussions, delivering the complete and authoritative guidance you need to ensure optimal perioperative safety for neurosurgical patients. Integrates current scientific principles with the newest clinical applications. Explains what to do under any set of circumstances, the logic behind why it should be done, and how to avoid complications. Clear conceptual illustrations make complex concepts easier to understand at a glance. Comprehensive and broad coverage of all important aspects of neuroanesthesia enables you to find reliable answers to any clinical question. Access brand-new information to keep you current! All chapters have been thoroughly updated to reflect the latest developments in neurosurgical anesthesia. A completely reorganized TOC offers easier access to information. Covers the latest advances in neuromodality monitoring — brain tissue oxygenation oximetry; microdialysis; and depth of anesthesia. Includes a brand-new chapter on end-of-life care and the diagnosis and management of brain death, as well as a new chapter on minimally invasive techniques. New information on Parkinson's disease has been added to the chapter on Awake Craniotomy.

#### Annual Update 2003 Springer Nature

This book offers valuable guidance to neurointensivists, other neurocritical care staff, and those desiring to develop a neurocritical care unit via a thorough discussion of neurological emergencies and neurocritical care unit organization. This comprehensive volume begins with a review of acute neurological emergencies as managed clinically in the neurocritical care unit. Topics include acute cerebrovascular, neurological, and neurosurgical disorders. The unique aspect of this book is its description of the organization of the neurocritical care unit. We focus on how other services in the hospital interact with and assist neurocritical care operations, telemedicine/telestroke, and neurocritical care personnel and their roles. A review of expected outcomes of neurocritical care conditions is also included. Neurointensivists, neurocritical care unit staff leadership, hospital administrators, and those interested in developing a neurocritical care unit will find *Neurointensive Care Unit: Clinical Practice and Organization* to be an invaluable guide.

#### *Post-Intensive Care Syndrome* Cambridge University Press

This groundbreaking reference — created by an internationally respected team of clinical and research experts — provides quick access to concise summaries of the body of nursing research for 192 common medical-surgical interventions. Each nursing care guideline classifies specific nursing activities as Effective, Possibly Effective, or Possibly Harmful, providing a bridge between research and clinical practice. Ideal for both nursing students and practicing nurses, this evidence-based reference is your key to confidently evaluating the latest research findings

and effectively applying best practices in the clinical setting. Synthesizing the current state of research evidence, each nursing care guideline classifies specific activities as Effective, Possibly Effective, Not Effective, or Possibly Harmful. Easy-to-recognize icons for each cited study help you differentiate between findings that are based on nursing research (NR), multidisciplinary research (MR), or expert opinion (EO), or those activities that represent established standards of practice (SP). Each nursing activity is rated by level of evidence, allowing you to gauge the validity of the research and weigh additional evidence you may encounter. Guidelines are identified by NIC intervention labels wherever appropriate, and NOC outcome measurements are incorporated throughout. An Evolve website provides additional evidence-based nursing resources.

**Paediatric Critical Care Manual** Elsevier Health Sciences  
Endorsed by the Australian College of Critical Care Nurses (ACCCN) ACCCN is the peak professional organisation representing critical care nurses in Australia Written by leading critical care nursing clinicians, Leanne Aitken, Andrea Marshall and Wendy Chaboyer, the 4th edition of Critical Care Nursing continues to encourage and challenge critical care nurses and students to develop world-class practice and ensure the delivery of the highest quality care. The text addresses all aspects of critical care nursing and is divided into three sections: scope of practice, core components and specialty practice, providing the most recent research, data, procedures and guidelines from expert local and international critical care nursing academics and clinicians. Alongside its strong focus on critical care nursing practice within Australia and New Zealand, the 4th edition brings

a stronger emphasis on international practice and expertise to ensure students and clinicians have access to the most contemporary practice insights from around the world. Increased emphasis on practice tips to help nurses care for patients within critical care Updated case studies, research vignettes and learning activities to support further learning Highlights the role of the critical care nurse within a multidisciplinary environment and how they work together Increased global considerations relevant to international context of critical care nursing alongside its key focus within the ANZ context Aligned to update NMBA RN Standards for Practice and NSQHS Standards

**Annuaire Des Organisations Internationales** Oxford University Press, USA

This is the tenth edition of the authoritative API Textbook of Medicine, completely revised, updated and expanded, with 28 brand new chapters. The textbook is comprised of two volumes, divided into 29 sections. Beginning with an introduction to the practice of medicine, and a disease profile and epidemiology of communicable and non-communicable diseases, each subsequent section covers a separate medical specialty. The second section on 'Clinical Approach to Key Manifestation' has been expanded with six new chapters, including the appropriate selection of imaging modalities. Other new topics in this edition include advanced cardiac life support system, life-style changes in the management of diabetes, diabetes in the elderly, prevention of cardiovascular disease, acute and chronic pancreatitis, and tumours of the liver. Chapters on chronic and sleep-related pulmonary disorders have been completely re-written to highlight their increased prevalence, and a new

chapter on pulmonary rehabilitation has been added. An entirely new section on the 'Future of Medicine' including regenerative medicine, nanotechnology and nanomedicine, robotic surgery, and an introduction to 'space medicine', brings the API Textbook of Medicine to its conclusion. With 1090 full colour images and illustrations, spanning over 3000 pages, this all-encompassing textbook is a comprehensive guide to the practice of medicine, brought fully up-to-date for physicians, surgeons and post-graduate medical students. Key Points New edition of this comprehensive, two volume textbook Fully revised, updated and expanded with 28 new chapters New section on the future of medicine 1090 full colour images and illustrations Previous edition published 2012

**Evidence-Based Practice** Springer

An important review on critical care for the general surgeon! Topics include: heparin induced thrombocytopenia, monitoring devices, mechanical ventilation, removal from mechanical ventilations, common complications in the critically ill patients, common drugs in the SICU, hypovolemic shock resuscitation, sepsis, nutrition, renal management, pain management, family engagement, and more!

**Principles and Practice of Critical Care** Springer Nature

Ideal for neurosurgeons, neurologists, neuroanesthesiologists, and intensivists, Monitoring in Neurocritical Care helps you use the latest technology to more successfully detect deteriorations in neurological status in the ICU. This neurosurgery reference offers in-depth coverage of state-of-the-art management strategies and techniques so you can effectively monitor your patients and ensure the best outcomes. Understand the scientific

basis and rationale of particular monitoring techniques and how they can be used to assess neuro-ICU patients. Make optimal use of the most advanced technology, including transcranial Doppler sonography, transcranial color-coded sonography, measurements of jugular venous oxygen saturation, near-infrared spectroscopy, brain electrical monitoring techniques, and intracerebral microdialysis and techniques based on imaging. Apply multimodal monitoring for a more accurate view of brain function, and utilize the latest computer systems to integrate data at the bedside. Access practical information on basic principles, such as quality assurance, ethics, and ICU design.

**Ethical Issues in Pediatric Hematology/Oncology** Elsevier Health Sciences

This book is one of the first to comprehensively summarise the latest thinking and research in the rapidly evolving field of quality management in intensive care. Quality indicators and outcome measures are discussed with a practical focus on patient-centred, evidence-based implementation for safer and more effective clinical practice. Chapters on topics such as teambuilding, patient satisfaction, mortality and morbidity, and electronic management systems are organised into three sections, covering quality management at the scale of the individual patient, the intensive care unit, and the national and international level. Written by a team of over forty international experts in the specialty, with editors who have been heavily involved for many years with the European Society of Intensive Care Medicine, the book reflects commonly accepted goals and guidelines for best practice, and will be valuable for practitioners worldwide. The ideal one-stop resource for intensive care physicians as well as ICU and hospital

managers.

Intensive Care Medicine JP Medical Ltd

In diesem handlichen Kitteltaschenbuch finden Sie die wichtigsten Fakten zur Beatmung: Prinzipien, Beatmungsverfahren bei speziellen Krankheitsbildern sowie Prävention und Behandlung von beatmungsbedingten Komplikationen. Ideal für alle Ärzte und das Fachpflegepersonal auf Intensivstation und im OP. Übersichtlich, praxisrelevant und auf das Wesentliche reduziert. Passt garantiert in jede Kitteltasche und als ebook auf das Smartphone! Nach kurzer Zeit liegt bereits die 2. aktualisierte Auflage vor.

**Annual Update in Intensive Care and Emergency Medicine 2014** Elsevier Health Sciences

This book is open access under a CC BY 4.0 license. It constitutes a unique source of knowledge and guidance for all healthcare workers who care for patients with sepsis and septic shock in resource-limited settings. More than eighty percent of the worldwide deaths related to sepsis occur in resource-limited settings in low and middle-income countries. Current international sepsis guidelines cannot be implemented without adaptations towards these settings, mainly because of the difference in local resources and a different spectrum of infectious diseases causing sepsis. This prompted members of the Global Intensive Care working group of the European Society of Intensive Care Medicine (ESICM) and the Mahidol-Oxford Tropical Medicine Research Unit (MORU, Bangkok, Thailand) - among which the Editors - to develop with an international group of experts a comprehensive set of recommendations for the management of sepsis in resource-limited settings.

Recommendations are based on both current scientific evidence and clinical experience of clinicians working in resource-limited settings. The book includes an overview chapter outlining the current challenges and future directions of sepsis management as well as general recommendations on the structure and organization of intensive care services in resource-limited settings. Specific recommendations on the recognition and management of patients with sepsis and septic shock in these settings are grouped into seven chapters. The book provides evidence-based practical guidance for doctors in low and middle income countries treating patients with sepsis, and highlights areas for further research and discussion.

Surgical Decision Making in Geriatrics Springer

PACTPatient-Centred Acute Care Training : a ESICM multidisciplinary distance learning programme for intensive care trainingMCQS in Critical Care MedicineWolters kluwer india Pvt Ltd

*Sepsis Management in Resource-limited Settings* Springer Nature

This is the first comprehensive book published from India which is based on MCQs, primarily for doctors appearing for competitive exams in critical care medicine. It is also a must have for every doctor and nurse working in the ICU, as the case scenarios and latest recommendations will help them to have a better approach towards complex situations and provide better care to the patients.

*A Prospective Study in 12 European Countries* Elsevier Health Sciences

Ideal for neurosurgeons, neurologists, neuroanesthesiologists, and intensivists, Monitoring in Neurocritical Care helps you use

the latest technology to more successfully detect deteriorations in neurological status in the ICU.
