MAREN LYNN

Transport Revolutions Oxford English for Careers
 The title is part of the International Handbook of Vocational Education and Training, the standard reference for comparative research in vocational education in German. It is intended for an academic audience as well as vocational education and training practitioners. Selected titles are translated to make them available to the much broader English readership.
Erziehung und Unterricht Cambridge University Press
 The volume focuses on emerging "rooms for manoeuvre" in the socialist societies of Central and Eastern Europe after the Second World War. Unlike in other works, these areas of activity are not viewed as isolated spheres where citizens could act independently from political and societal constraints. They are rather conceptualized here as geographical, social or institutional spaces whose existence was either outside of political control or more or less intentionally allowed by authorities and other decision-makers. The contributions investigate how East Germans, Poles, Romanians, Slovaks and Czechs coped with the limitations of socialist reality. How did they adopt and successfully adapt given norms to their own specific interests? To what extent were the resulting "rooms for manoeuvre" not only essential aspects of the state socialist system, but even necessary to stabilize it?

 Students will . *enjoy their course with the inspiring and up-to-date topics and Culture Shocks' sections. *be motivated and confident with activities that help learners both understand and internalise grammar rules and avoid common mistakes *be able to speak easily with a syllabus that focuses on communication in real-world contexts and vocabulary. *are extensively prepared for school-leaving exams with a clear syllabus supported by exam practice and exam strategies. Teachers .. *can make every lesson different with the variety of material in the Student's Book, the video, the CD-ROM, photocopyables and tests. *can easily adapt lessons and tests with photocopyables and the Testmaster CD-ROM. SUCCESS. It's all in the name
Let it all go Tectum
 Socrates said "To know thyself is the beginning of wisdom". Now Patrick Hoeller asks in this life counselling manuscript "What exactly do we know when we know ourselves?". Let it All Go is a book on life coaching combined with counselling, letting go of the past in order to live in the present etc. It is very much telling the reader that first of all everyone needs to know himself before he can understand others. And the first benefit of self knowledge is,

according to Patrick Hoeller, happiness. With self knowledge comes the ability to choose the right things for us - from sandwiches to the right life partner. So a book which aims to raise awareness in readers that "to know others, one must first know oneself" will be a useful addition to the range of self-help books on the market. Sometimes it takes a wrong turn to get you to the right place. Life is not meant to be lived perfectly but is to be lived. What you are waiting for is not as important as what happens to you while you are waiting. Not everyone will see your dreams and visions, you have to know and believe for yourself. The stretching of your faith is immediate pain that results in ultimate gain. It is in the waiting that you become who you are meant to be. In the midst of your struggle to find out who you are, there are infinite possibilities for beauty, hope, wonder and love. You have to trust in what feels true even if that truth requires you to ignore what you know. Things always make sense in hindsight. When you look back on your life, you can see that you went through the exact challenges that were necessary to allow for growth in the precise way that you most needed. All your personal struggles led you exactly where you really wanted to go but didn't know at that time. How difficult was it for you to let go?
A History and Theory of the Social Sciences Longman
 Authentic and up-to date information in every course, written and checked by industry insiders Clear and straightforward structure, with each unit containing a menu of learning outcomes, and an end-of-unit checklist with 'Can do' tick boxes Teaches English in context, so students practise the language and skills they need for the job in real work situations Real-world profiles from genuine professionals in the 'It's my job' section offer authentic and engaging insights into the industry Extra facts, figures, quotations, and specialist terminology included in the top margin of unit pages Additional activities and tests in the Teacher's Resource Book make the course suitable for mixed-ability classes The Teacher's Resource Book provides specialist background to the industry for every unit, as well as industry tips to support non-expert teachers Project work in the Student's Book, additional activities on the Student's website, and a Key words list of essential vocabulary at the end of every unit provide extra opportunities for revision

 The book presented here describes an outstanding attempt, not only to include children's views but to partner with children to develop the concept of well-being and to study the phenomenon as the children understand it. The authors do this by placing the concept of children's well-being within the existing discourses on the topic and by developing their unique theoretical approach to the concept. Then, and based on what children told them, the authors identify different domains and dimensions of children's well-being and touch upon its multifaceted nature. The book concludes with drawing research and policy implications from an integrated summary of the study's findings and lists indicator concepts that present an alternative framework and conceptualisation of well-being from a child standpoint.

 Despite the increasing prominence of Klossowski's philosophical work, there exists no full-length or sustained treatment of his writings on Nietzsche. This study analyses Klossowski's semiotic of intensity as a conceptual foundation for his philosophy and interpretation of Nietzsche, grounded in the central principles of his theory of signs. It then explores its implications for the categories of chance, causality, individuation and time, drawing a series of parallels between Klossowski's texts and the work of other scholars, such as McTaggart, Eco, D. Z. Albert, M. Silverstein, Meillassoux, N. Land and J. Stambaugh. Throughout, this work lends accessibility to Klossowski's often opaque and idiosyncratic style. It should be relevant to anyone interested in Klossowski's philosophical work, in contemporary Nietzsche scholarship, or in the 20th Century linguistic and existential Continental tradition.

 Transport Revolutions: Moving People and Freight without Oil sets out the challenges to our growing dependence on transport fuelled by low-priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective, secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. Transport Revolutions synthesizes engineering, economics, environment, organization, policy and technology, and draws extensively on current data to present important conclusions. The authors argue that land transport in

the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid - as trains and trolley buses are powered today - rather than from on-board fuel. They go on to discuss marine transport, whose future is less clear, and aviation, which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport, *Transport Revolutions* is essential reading for professionals and students in transport, energy, town planning and public policy.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in

the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

India Harvard University Press

Sind Verhaltenstherapie und Zwang - wie immer wieder behauptet - unvereinbar? Schliessen sich Freiheitsentzug und Beziehungsarbeit gegenseitig aus? Endet die Unterbringung von Kindern und Jugendlichen in geschlossenen Heimen sogar in der Deformation ihrer Persönlichkeit? In der Kinder- und Jugendhilfe werden diese Fragen seit Jahrzehnten mit immer wieder wechselnden Vorzeichen heftig diskutiert. Nur auf wissenschaftlich belastbare Daten kann sich eigentlich niemand berufen. Bernhard Stadlers empirisch fundierte Studie zu dieser Thematik schliesst damit eine Forschungslücke und widerlegt so manches Vorurteil. Am Beispiel des Mädchenheims Gauting und seiner Arbeit mit dissozialen Mädchen zeigt er, in welchen Fällen freiheitsentziehende Massnahmen in der Jugendhilfe helfen können und wo nicht. Er bezieht dazu subjektive Einschätzungen der Jugendlichen und ihrer Betreuer ebenso ein wie Testergebnisse, Interviews und die Diagnosen eines externen Instituts.

Unternehmensrechnung HAK IV

Divided into two parts, this book examines the train of social theory from the 19th century, through to the 'organization of modernity', in relation to ideas of social planning, and as contributors to the 'rationalistic revolution' of the 'golden age' of capitalism in the 1950s and 60s. Part two examines key concepts in the social sciences. It begins with some of the broadest concepts used by social scientists: choice, decision, action and institution and moves on to examine the 'collectivist alternative': the concepts of society, culture and polity, which are often dismissed as untenable by postmodernists today. This is a major

contribution to contemporary social theory and provides a host of essential insights into the task of social science today.

Job Matters

'There is no alternative to postmetaphysical thinking': this statement, made by Jürgen Habermas in 1988, has lost none of its relevance. Postmetaphysical thinking is, in the first place, the historical answer to the crisis of metaphysics following Hegel, when the central metaphysical figures of thought began to totter under the pressure exerted by social developments and by developments within science. As a result, philosophy's epistemological privilege was shaken to its core, its basic concepts were de-transcendentalized, and the primacy of theory over practice was opened to question. For good reasons, philosophy 'lost its extraordinary status', but as a result it also courted new problems. In *Postmetaphysical Thinking II*, the sequel to the 1988 volume that bears the same title (English translation, Polity 1992), Habermas addresses some of these problems. The first section of the book deals with the shift in perspective from metaphysical worldviews to the lifeworld, the unarticulated meanings and assumptions that accompany everyday thought and action in the mode of 'background knowledge'. Habermas analyses the lifeworld as a 'space of reasons' - even where language is not (yet) involved, such as, for example, in gestural communication and rituals. In the second section, the uneasy relationship between religion and postmetaphysical thinking takes centre stage. Habermas picks up where he left off in 1988, when he made the far-sighted observation that 'philosophy, even in its postmetaphysical form, will be able neither to replace nor to repress religion', and explores philosophy's new-found interest in religion, among other topics. The final section includes essays on the role of religion in the political context of a post-secular, liberal society. This volume will be of great interest to students and scholars in philosophy, religion and the social sciences and humanities generally.
