BEARD SAWYER

Jane's Armour and Artillery Crescent

This book by a group of international scholars, both Arab and Western, was first published in 1985, and considers the state of contemporary North Africa and its

position both in the Arab world and within wider international affairs. It examines the cultural and historical contexts which have shaped political and social conditions within the region. It also considers the nature of intra-regional conflict which has long been a feature of the North African political scene. The sociological impact of

economic development within the region is treated at length, as are the changing positions of both the traditional elites and new groups such as women workers.

Timmerman details Iraq's

purchases of strategic weapons--including chemical weapons--and lays the blame for their arms build-up in the laps of the Western allies who supplied them. This explosive report is an indictment of Western governments as much as it is an expose of Western greed at the expense of world peace.

First published in 1987, *The Compendium of Armaments and Military Hardware* provides, within a single volume, the

salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required

for the weapons to be used effectively. A key title amongst Routledge reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'. The value of conventional weapons imported by Third World countries between 1971 and 1985

increased four times over that of the previous two decades--a leap that reflects profound changes in the economic and technological relations between industrialized nations and the Third World and holds serious political repercussions. A comprehensive overview of the flow of conventional weapons between 1971 and 1985, this volume analyzes both the suppliers--their arms export bureaucracies, degree of dependence on arms exports, and shifts in arms export policies--

and the Third World recipients. Providing valuable insight into the changing arms strategy of Third World countries, the book assesses the reasons underlying this influx of weapons, the factors that propel the arms trade, and the implications of structural changes that have occurred in the market.

The story of the battlefield

in the 20th century was dominated by a handful of developments. Foremost of these was the introduction and refinement of tanks. In Tank Warfare, prominent military historian Jeremy Black offers a comprehensive global account of the history of tanks and armored warfare in the 20th and 21st centuries. First introduced onto the battlefield during the World War I, tanks represented the reconciliation of firepower and mobility and

immediately seized the imagination of commanders and commentators concerned about the constraints of ordinary infantry. The developments of technology and tactics in the interwar years were realized in the German blitzkrieg in World War II and beyond. Yet the account of armor on the battlefield is a tale of limitations and defeats as well as of potential and achievements. Tank Warfare examines the traditional narrative of armored warfare while at

the same time challenging it, and Black suggests that tanks were no "silver bullet" on the battlefield. Instead, their success was based on their inclusion in the general mix of weaponry available to commanders and the context in which they were used.

The armored car has played a major role in American military operations since the relatively early days of the 20th Century. In 1989 Col. Royal P. Davidson arranged for the

installation of a .30 caliber Colt machine gun on a Duryea light three-wheeled car. In doing so, he jump-started the development and production of armored fighting vehicles that have served in the American military ever since. Although the very first armored cars were merely outfitted with a gunshield, they were soon fully protected by armor plating. In this installment of R. P. Hunnicutt's 10-volume series on the history of American armored vehicles he

details their early development through WWI, WWII, Korea, and Vietnam. Beginning with the development of armored cars on American soil at the outbreak of WWI-although none were ever shipped overseas-Hunnicutt goes on to describe the production of armored cars based on commercial car and truck chassis in the 1920s. These vehicles eventually reached limited production as the armored car M4. With detailed drawings and photographs to illustrate

the history, Hunnicutt describes the development of the armored car T3, which was also designated as scout car T1. The development of these lightweight scout cars, which met the needs of the cavalry, made the armored car unnecessary by 1937. Although production of armored cars stopped for the American military, American development continued on armored cars intended for British use. However, in 1942 as the Palmer Board decided

to limit the weight of reconnaissance vehicles, the light armored car T22E2 was standardized as the M8 and put into production. The M8 and a variation, the M20, served in the U.S. Army until after the Korean War, with new models developed for use in Vietnam. Spanning the history of American wheeled combat vehicles, Hunnicutt's "Armored Car" is a must have for anyone with a keen interest in the history of American military operations and equipment.
