## KANE BRADLEY

### Handbook of Research on Implementation and Deployment of IoT Projects in Smart Cities Springer

"The objective of the "Stemming the Tide" symposium was to empower cultural heritage authorities, managers, and advocates to pursue more ambitious engagement with, and collaborative approaches to, the climate crisis. The conference examined the impact of climate change on cultural heritage and communities worldwide, discussed the responsibilities of stewards of cultural heritage in fostering collaborative solutions, addressed urgent questions of equity and inclusion, and identified strategies that leverage cultural heritage for climate action"--

### Autonomy in the European Union Springer

European policymakers are attempting to develop immigration policies that meet economic needs and promote greater competitiveness and growth —without undermining the social models so valued by their electorates. To succeed, they must take into account aging populations, high and persistent levels of overall unemployment, even higher levels of unemployment among immigrants

and ethnic minorities, and sector- and location-specific labor mismatches and shortfalls. Europe and Its Immigrants in the 21st Century examines many of the critical issues facing European economies and societies with regard to immigration. The authors juxtapose these issues with those facing the "traditional countries of immigration" (Australia, Canada, New Zealand, and the United States) and offers policy recommendations to address them. Among other topics, this book examines options for immigrant selection and managing all forms of migration better (including "irregular" migration), and offers recommendations for immigrant and minority integration policies at the EU, national, and local levels - where most integration work takes place. Contributors include Wolfgang Lutz (Vienna Institute for Demography), Klaus Zimmerman (Institute for the Study of Labor/DIW, Berlin), Louka Katseli (OECD), Grete Brochman (Institute for Social Research, University of Oslo), Heaven Crawley (AMRE Consulting), Demetrios G. Papademetriou (Migration Policy Institute), Sarah Spencer (COMPAS, University of Oxford), Brian Ray (University of Ottawa), Rinus Pennix (University of Amsterdam), Jorge Gaspar (University of Lisbon), Lucinda Fonseca (Centro de Estudos Geográficos), Kathleen Newland (Migration Policy Institute), Doris Meissner (Migration Policy Institute), T. Alexander Aleinikoff (Georgetown University Law Center), and Patrick Weil (CEPIC/ Centre d'histoire sociale du 20e siecle).

### Public Nurseries K G Saur Verlag Gmbh & Company

This book presents the latest thinking on the benefits and dangers of higher density urban living. It offers diverse opinions and research, from a wide range of disciplines, and gives an insight into both the theoretical debate and the practical challenges surrounding the compact city. Essential reading for anyone with an interest in sustainable urban development.

### 2 Parts IGI Global

Urban planning is undergoing a period of transformation across Europe, with a major trend towards increased urban competition, national deregulation and greater private sector influence. Urban Planning in Europe is the first comprehensive analysis of the influence of countries is developed, presenting the similarities and differences of each country's national planning system. The authors use detailed case studies to explore planning policies in a range of European cities, and discuss the social and environmental objectives that influence today's urban planner. Urban Planning in Europe is an essential guide to contemporary European planning projects and highlighting opportunities for innovation which contain vital lessons for the future of urban decision making.

### A New Deal Or a Continuing Dialogue of the Deaf? Migration Policy Inst

This book sheds new light on how lobbying works in the European Union. Drawing on the first-hand

professional experience of lobbyists, policymakers, and corporate and institutional stakeholders, combined with a sound academic foundation, it offers insights into successful lobbying strategies, such as how alliances are formed by interest groups in Brussels. The authors present key case studies, e.g. on the shelved EU-US trade deal Transatlantic Trade and Investment Partnership (TTIP), lobbying scandals, and the role of specific interest groups and EU Think-Tanks. Furthermore, they highlight efforts to improve transparency and ethical standards in EU decision-making, while also underscoring the benefits of lobbying in the context of decision-making. Understanding the tools and techniques of effective lobbying, as well as the dynamics and trends in EU lobbying, will allow professionals involved in the lobbying process, such as policymakers and corporate and institutional stakeholders, to improve their performance and achieve better results when pursuing their respective interests.

*Urban Planning in Europe* Martinus Nijhoff Publishers

On the way towards the Information Society, global networks such as the Internet, together with mobile computing, have made wide-area computing over virtual communities a reality. Digital city projects, with the goal of building platforms to support community networking, are going on worldwide. This is the first book devoted to digital cities. It is based on an international symposium held in Kyoto, Japan, in September 1999. The 34 revised full papers presented were carefully selected for inclusion in the book; they reflect the state of the art in this exciting new field of interdisciplinary research and development. The book is divided into parts on design and analysis, digital city experiments, community network experiments, applications, visualization technologies, mobile technologies, and social interaction and communityware.

*A Powerful Force for Health and Sustainable Development in Europe* Amsterdam University Press  
This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.

*Geographies of Asylum in Europe and the Role of European Localities* Routledge

This book examines the nexus between City Networks, multilevel governance and migration policy. Examining several City Networks operating in the European Union and the United States of America's multilevel political settings, it brings migration research into conversation with both policy studies and political science. One of the first comparative studies of City Networks and migration, the book argues that multilevel governance is the result of a contingent process of converging interests and views between leaders in network organisations and national governments, the latter continuing to play a key gatekeeping role on this topical issue even in the supranational EU system.

**Culture: urban future** Brill Research Perspectives in

This book explores mobilities as a key to understanding the practices that both frame and generate contemporary everyday life in the urban context. At the same time, it investigates the challenges arising from the interpretation of mobility as a socio-spatial phenomenon both in the social sciences and in urban studies. Leading sociologists, economists, urban planners and architects address the ways in which spatial mobilities contribute to producing diversified uses of the city and describe forms and rhythms of different life practices, including unexpected uses and conflicts. The individual sections of the book focus on the role of mobility in transforming contemporary cities; the consequences of interpreting mobility as a socio-spatial phenomenon for urban projects and policies; the conflicts and inequalities generated by the co-presence of different populations due to mobility and by the interests gathered around major mobility projects; and the use of new data and mapping of mobilities to enhance comprehension of cities. The theoretical discussion is complemented by references to practical experiences, helping readers gain a broader understanding of mobilities in relation to the capacity to analyze, plan and design contemporary

cities.

**Strategies, Dynamics and Trends** UNESCO Publishing

Circular Economy in the Construction Industry is an invaluable resource for researchers, policymakers, implementers and PhD and Masters-level students in universities analyzing the present status of Construction and Demolition Wastes (C&DW) management, materials development utilizing slag, fly ash, HDPE fibre, geo-wastes, and other wastes, green concrete, soil stabilization, resource circulation in construction sectors, success in experimentation & commercial production, future needs, and future research areas. While huge C&DW is wasted by dumping, there is potential of recycling preventing greenhouse gas (GHG) emissions and environmental pollution as well as creating business opportunities. Circularity of resources in the construction industry can contribute to a more secure, sustainable, and economically sound future through proper policy instruments, management systems, and recycling by selecting the following: Supply chain sustainability and collection of C&D Wastes, Appropriate separation and recycling technology, Enforcement of policy instruments, Productivity, quality control of recycled products and intended end use, Economic feasibility as business case, commercialization, generating employment. This book addresses most of the above issues in a lucid manner by experts in the field from different countries, which are helpful for the related stakeholders, edited by experts in the field.

New Internationalist

This book was written with the aim of showing that even in the era of globalization developments appearing in cities are not subject to almost unconditional global forces. Rather, universal forces are decisive eventualities in the process of urban restructuring, often influencing its course and speed, yet developments and particularities within a city strongly influence the course of events and the extent to which negative characteristics of globalization might occur. Berlin, Brussels, Hanoi, Ho Chi Minh City, Hong Kong, Jerusalem, Johannesburg, Moscow, St. Petersburg, Sarajevo and Vienna: Using these important cities the special relationship between global and local/regional forces is analyzed. The case studies were selected based on their political and cultural context and the fact that their social and political fabric was subject to major changes in the recent past. How global processes manifest themselves locally depends to a great extent on how development processes and endogenic potentials are initiated locally in order to cope with the new global economic and societal conditions.

*Globalization, Political Change and Urban Development* UCL Press

This open access book describes how the numerous arrivals of asylum seekers since 2015 shaped reception and integration processes in Europe. It addresses the structuration of asylum and reception systems, and spaces and places of reception on European, national, regional and local level. It also analyses perceptions and discourses on asylum and refugees, their involvement and the consequences for policy development. Furthermore, it examines practices and policy developments in the field of refugee reception and integration. The volume shows and explains a variety of refugee reception and integration strategies and practices as specific outcome of multilevel governance processes in Europe. By addressing and contextualizing those multiple experiences of asylum seeker reception, the book is a valuable contribution to the literature on migration and integration, societal development and political culture in Europe.

*Balancing Student Mobility Rights and National Higher Education* UN-HABITAT

**Leading Cities** Cambridge University Press

This open access book explores how research and policymaking in the field of migrant integration have developed historically and how this interrelationship plays out in the strongly politicised climate of opinions on migration in Europe. It features interdisciplinary theoretical contributions as well as original empirical studies on research-policy dialogues at both the EU and country level. The chapters study not only how the dialogue between research and policy is structured (such as advisory bodies, research agencies, and ad-hoc committees), but also how these dialogues affect policymaking and the development of migrant integration research itself as well. The analysis reveals profound changes in the dialogue structures associated with the research-policy nexus in the domain of migrant integration. On the one hand, dialogue structures have become more ad-hoc, often established in response to distinct political events or to specific problems. On the other, politicisation has not thwarted all efforts to develop more institutionalised dialogue structures between producers and users of knowledge. In addition, research has contributed to policymaking in very different ways in various European countries. This edited volume is unique in this effort to

reflect on the impact of research-policy dialogues both on the development of migrant integration policies as well as on migrant integration research. It will be of importance to scholars in this field as well as to policymakers and other stakeholders involved in migrant integration policymaking.

*A Sustainable Urban Form?* Legare Street Press

The book analyses the concept and conditions of transnational solidarity, its challenges and opportunities, drawing on diverse disciplines as Law, Political Science, Sociology, Philosophy, Psychology and History. In the contemporary world, we see two major opposing trends. The first involves nationalistic and populist movements. Transnational solidarity has been under pressure for a decade because of, among others, global economic and migration crises, leading to populist and authoritarian leadership in some European countries, the United States and Brazil. Countries withdraw from international commitments on climate, trade and refugees and the European Union struggles with Brexit. The second trend, partly a reaction to the first, is a strengthened transnational grass-root community – a cosmopolitan movement – which protests primarily against climate change. Based on interdisciplinary reflections on the concept of transnational solidarity, its challenges and opportunities are analysed, drawing on Europe as a focal case study for a broader, global perspective.

*Building on the Experiences of City-to-city Cooperation* Springer Nature

National healthy cities networks are the backbone of the healthy cities movement in Europe. They provide political, strategic and technical support to their members, represent a national resource of experience and expertise in health development and offer a dynamic platform for public health advocacy at the national and international level. Each national network is unique. Each one develops in response to the needs of its member cities, according to the resources available and within its own cultural and legal framework. The publication has two parts : an analysis of the multifaceted work and achievements of national networks across Europe and a profile of each network focusing on its special features, successes and aspirations. [Authors] Chapter 5. Profiles of the national healthy cities networks in Europe : Austria, Belgium, Bosnia and Herzegovina, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Israel, Italy, Kazakhstan, Latvia, Lithuania, Netherlands, Norway, Poland, Portugal, Russian Federation, Slovakia, Slovenia, Spain, Sweden, Turkey, Ukraine, United Kingdom

*Technologies, Experiences, and Future Perspectives* Verso Books

In Urban Europe, urban researchers and practitioners based in Amsterdam tell the story of the European city, sharing their knowledge of and insights into urban dynamics in short, thought-provoking pieces. Their essays were collected on the occasion of the adoption of the Pact of Amsterdam with an Urban Agenda for the European Union during the Dutch Presidency of the Council in 2016. The fifty essays gathered in this volume present perspectives from diverse academic disciplines in the humanities and the social sciences. The authors - including the Mayor of Amsterdam, urban activists, civil servants and academic observers - cover a wide range of topical issues, inviting and encouraging us to rethink citizenship, connectivity, innovation, sustainability and representation as well as the role of cities in administrative and political networks. With the Urban Agenda for the European Union, EU Member States have acknowledged the potential of cities to address the societal challenges of the 21st century. This is part of a larger, global trend. These are all good reasons to learn more about urban dynamics and to understand the challenges that cities have faced in the past and that they currently face. Often but not necessarily taking Amsterdam as an example, the essays in this volume will help you grasp the complexity of urban.

*New Land Marks* Project Management: Concepts, Methodologies, Tools, and Applications Concepts, Methodologies, Tools, and Applications

Leading Cities is a global review of the state of city leadership and urban governance today. Drawing on research into 202 cities in 100 countries, the book provides a broad, international evidence base grounded in the experiences of all types of cities. It offers a scholarly but also practical assessment of how cities are led, what challenges their leaders face, and the ways in which this leadership is increasingly connected to global affairs. Arguing that effective leadership is not just something created by an individual, Elizabeth Rapoport, Michele Acuto and Leonora Grcheva focus on three elements of city leadership: leaders, the structures and institutions that underpin them, and the tools used to drive change. Each of these elements are examined in turn, as are the major urban policy issues that leaders confront today on the ground. The book also takes a deep dive into one particular example of tool or instrument of city leadership – the strategic urban plan. Leading Cities provides a much-needed overview and introduction to the

theory and practice of city leadership, and a starting point for future research on, and evaluation of, city leadership and its practice around the world.

Springer

By examining the great economic and political transformations of our time, Juan Luis Manfredi-Sánchez reveals how cities and their hinterlands have become part of globalisation. The global city

has joined the group of actors who develop diplomatic, political and communicative action in a manner that is de facto and lawful. Thus, the city is involved in the formulation of foreign policy at the same time that it proposes its own political agenda, which may or may not be aligned with its own country. The city thereby becomes a source of innovation in the field of diplomacy. The

Covid-19 pandemic is accelerating the political and diplomatic role of cities, which have become epicentres of prevention and response in the face of this public health crisis.
