Describes 250 occupations which cover approximately 107 million jobs.

Report Tata McGraw-Hill Education

"This new curriculum standard for the Level 2 - General Machinist for the Machining and Tooling trades is based upon the on-the-job performance objectives, located in the industry approved training standard. The curriculum is organized into 8 reportable subjects. The Program Summary of Reportable Subjects chart summarizes the training hours for each reportable subject. The curriculum identifies only the learning that takes place off-the-job. The in-school program focuses primarily on the theoretical knowledge and the essential skills required to support the performance objectives of the Apprenticeship Training Standards. Employers/Sponsors are expected to extend the apprentice's knowledge and skills through practical

training on the work site."--Document.

Annual Report - Malayan Railway Administration by Mocktime Publication
 Michèle Lamont takes us into the world inhabited by working-class men--the world as they understand it. Interviewing black and white working-class men who, because they are not college graduates, have limited access to high-paying jobs and other social benefits, she constructs a revealing portrait of how they see themselves and the rest of society. Morality is at the center of these workers' worlds. They find their identity and self-worth in their ability to discipline themselves and conduct responsible but caring lives. These moral standards function as an alternative to economic definitions of success, offering them a way to maintain dignity in an out-of-reach American dreamland. But these standards also enable them to draw class boundaries toward the poor and, to a lesser extent,

the upper half. Workers also draw rigid racial boundaries, with white workers placing emphasis on the "disciplined self" and blacks on the "caring self." Whites thereby often construe blacks as morally inferior because they are lazy, while blacks depict whites as domineering, uncaring, and overly disciplined. This book also opens up a wider perspective by examining American workers in comparison with French workers, who take the poor as "part of us" and are far less critical of blacks than they are of upper-middle-class people and immigrants. By singling out different "moral offenders" in the two societies, workers reveal contrasting definitions of "cultural membership" that help us understand and challenge the forms of inequality found in both societies.

This massive work took seventeen years to complete, and must stand as a seminal work of meticulous history. More than a history, it is an analysis of the railways and their role in the history of Nigeria as a country. It was the railways that carried agricultural products to the ports; that moved people at relatively little cost over long distance for trade and occupational pursuits; that gave support and strength to military operations and the movement

of heavy duty equipment and materials needed for industrial works and development. The railways were the life-line of national economic development, and the pioneers in the opening up of the country to development and contact with the outside world. The three volumes explore the systems from their beginnings in the 1890s to the closing decades of the twentieth century. Over 300 illustrations illuminate the volumes. There is introductory material on exploration, geography and demography, the basics of the railway system, and a description of the assets, fuel examination and water supply exploration. The economic and political history of each of the nine railway and tramway systems is given.

Operational facilities and commercial practice are each described within historical perspective. The whole is summed up under organisations, accounts and statistics, staff and industrial relations, and short biographies of departmental heads. The author spent forty-seven years in Nigeria, including twenty-seven serving to Nigeria's history.
