 This monograph treats, for the first time, major aspects of gas dynamics of nozzles from a general point of view. Its outstanding feature is the presentation of the modern theory of gas flows and modern analytical and numerical methods, together with numerous examples of practical applications. At the same time, quite diverse physico-chemical processes, such as dissociation and

recombination, relaxation of vibrational degrees of freedom, two-phase flows with phase transformations and electromagnetic influences, are considered. The material is presented in such a way as to help the reader to use numerous methods and approaches, not only for the study of gas flows in nozzles, but also for the investigation of a wide variety of problems of physical gas dynamics in different areas of application. The number of applications which may benefit from the use of the methods and results presented in this book is constantly growing. Theoretical, numerical and analytical methods of

physical gas dynamics of internal flows may be, and are nowadays, applied to solving the problem of preventing pollution of the air basin with toxic substances. These methods make it possible to describe the formation and transformation of toxic components in the vapour generators of thermal power plants, internal combustion engines and various metallurgical installations. The methods of physical gas dynamics may be used in meteorology and powder metallurgy to create ultradispersed media and predict their properties. **The Global Findex Database 2017** Springer

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of

digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at

*Materiality and Organizing BoD - Books on Demand* This edited collection brings together leading academics in the field to explore the ways in which digital and non-digital artifacts shape how groups and collectives organize. It focuses on the idea of materiality and the interactions between the social and the technical in organizations, at work, and in technologies

There is much that is fascinating here. Long-established experiments and conclusions are rubbished and reinterpreted, long-established assumptions and beliefs about emotions are soundly trounced, and generally a good going-over is delivered to the whole field... it is such a blockbuster that one can only reel backwards and tell anyone studying the subject that they would be crazy not to get it' - Self & Society This fascinating book overviews the psychology of the emotions in its broadest sense, tracing historical, social, cultural and biological themes and analyses. The contributors - some of the leading figures in the field - produce a new theoretical synthesis by drawing together these strands. From the standpoint of the function of the emotions in everyday life, the authors focus on: the discursive role played by the emotions in expressing judgements about, attitudes to and contrition for actions done by the self and others, and how certain emotions - such as guilt, shame, embarrassment, chagrin and regret - seem to play

a role in social control; the variation and diversity in emotion, which provides scope for exploring how patterns of emotion contrast in different societies, across gender lines, at different historical times, and between children and adults; and the way in which the body is shaped and its functions influenced by culturally maintained patterns of emotion displays.

**The Consequences of Information** SAGE

In *Sustainable History and Human Dignity*, Professor Nayef Al-Rodhan shows that it is the human quest for sustainable governance, balancing the ever-present tension between nine human dignity needs and three human nature attributes (emotionality, amorality & egoism), that has and will most profoundly shape the course of history. Beginning with an 'Ocean Model' of a single collective human civilisation, Al-Rodhan constructs a common human story comprised of multiple geo-cultural domains and sub-cultures with a history of mutual borrowing and synergies. If humanity as a whole is to flourish, all of these diverse geo-cultural domains must succeed.

Only thus can lasting peace and prosperity be achieved for all, especially in the face of 'Civilisational Frontier Risks' and highly disruptive technologies in the twenty-first century.

Information produced and disseminated by an interlocking ecology of computer-based systems and artifacts currently provides the essential means for planning organizational operations and controlling organizational performances. This book describes the vital importance that digital information acquires in restructuring organizations.

Institution of Engineering and Technology  
Intelligent Transport Systems (ITS) have been a domain of substantial development for more than thirty years, enhancing safety, (energy and fuel) efficiency, comfort, and economic growth. Cooperative Intelligent Transport Systems (C-ITS), also referred to as Connected Vehicles, are a prelude to, and pave the way towards road transport automation. Vehicle connectivity and

information exchange will be an important asset for future highly-automated driving. The book provides a comprehensive insight in the state of the art of C-ITS and automated driving, especially addresses the important role of ICT (Information and Communication Technologies) infrastructure, and presents the main achievements (both theory and practice), as well as the challenges in the domain in Europe, the US and Asia/Pacific.

*The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies*

Edward Elgar Publishing  
Jannis Kallinikos analyzes the recent spectacular growth of information and the self-propelling processes through which technological information is increasingly generated out of the reshuffling and recombination of available and interoperable information sources. He argues that information is no longer simply a resource but a pervading element of socio-economic life that is crucially involved in the redefinition of a variety of organizational practices and modes of economic action. Academics and students in a variety of

disciplines, including information studies, information systems, managemen-

Big, unexpected changes are here to stay. Slow, incremental change has become a relic of the past. Today's shifts come

fast and big, what Darrell West calls megachanges, in which dramatic disruptions in trends and policies occur on a regular basis. Domestically, we see megachange at work in the new attitudes and policies toward same-sex marriage, health care, smoking, and the widespread legalization of marijuana use. Globally, we have seen the extraordinary rise and then collapse of the Arab Spring, the emergence of religious zealotry, the growing influence of nonstate actors, the spread of ISIS-fomented terrorism, the rise of new economic and political powers in Asia, and the fracturing of once-stable international alliances. Long-held assumptions have been shattered, and the proliferation of unexpected events is confounding experts in the United States and around the globe. Many of the social and political institutions that used to anchor domestic and international politics have grown weak or are in need of dramatic reform. What to do? West says that we should alter our

expectations about the speed and magnitude of political and social change. We also need to recognize that many of our current governing processes are geared to slow deliberation and promote incremental change, not large-scale transformation. With megachange becoming the new normal, our domestic and global institutions must develop the ability to tackle the massive economic, political, and social shifts that we face.
