The Impact of Publicity on Corporate Offenders University of Ottawa Press

In this newest installment in Chicago's series of Jacques Derrida's seminars, the renowned philosopher attempts one of his most ambitious goals: the first truly philosophical argument against the death penalty. While much has been written against the death penalty, Derrida contends that Western philosophy is massively, if not always overtly, complicit with a logic in which a sovereign state has the right to take a life. Haunted by this notion, he turns to the key places where such logic has been established—and to the place it has been most effectively challenged: literature. With his signature genius and patient yet dazzling readings of an impressive breadth of texts, Derrida examines everything from the Bible to Plato to Camus to Jean Genet, with special attention to Kant and post-World War II juridical texts, to draw the landscape of death penalty discourses. Keeping clearly in view

the death rows and execution chambers of the United States, he shows how arguments surrounding cruel and unusual punishment depend on what he calls an “anesthetical logic,” which has also driven the development of death penalty technology from the French guillotine to lethal injection. Confronting a demand for philosophical rigor, he pursues provocative analyses of the shortcomings of abolitionist discourse. Above all, he argues that the death penalty and its attendant technologies are products of a desire to put an end to one of the most fundamental qualities of our finite existence: the radical uncertainty of when we will die. Arriving at a critical juncture in history—especially in the United States, one of the last Christian-inspired democracies to resist abolition—The Death Penalty is both a timely response to an important ethical debate and a timeless addition to Derrida's esteemed body of work.

In spite of all the papers that others have written about the manuscript, there is no complete survey of all the approaches, ideas, background information and analytic studies that have accumulated over the nearly fifty-five years since the manuscript was discovered by Wilfrid M. Voynich in 1912. This report pulls together all the information the author could obtain from all the sources she has examined, and to present it in an orderly fashion. The resulting survey will provide a firm basis upon which other students may build their work, whether they seek to decipher the text or simply to learn more about the problem.

Is Two-Tier Health Care the Future? University of Ottawa Press
 Canadians are deeply worried about wait times for health care. Entrepreneurial doctors and private clinics are bringing Charter challenges to existing laws restrictive of a two-tier system. They argue that Canada is an outlier among developed countries in limiting options to jump the queue. This book explores whether a two-tier model is a solution. In *Is Two-Tier Health Care the Future?*, leading researchers explore the public and private mix in Canada, Australia, Germany, France, and Ireland. They explain the history and complexity of interactions between public and private funding of health care and the many regulations and policies found in different countries used to both inhibit and sometimes to encourage two-tier care, such as tax breaks. This edited collection provides critical evidence on the different approaches to regulating two-tier care across different countries and what could work in Canada. This book is published in English.

Studies of the influence of class and religion on politics often point to their gradual decline as a result of social change. Backed up by extensive evidence from 11 case studies and a 15-country pooled analysis, the editors argue instead that the supply of choices by parties influences the extent of class divisions: political choice matters.

What do we owe Iraq? America is up to its neck in nation building—but the public debate, focused on getting the troops home, devotes little attention to why we are building a new Iraqi nation, what success would look like, or what principles should guide us. *What We Owe Iraq* sets out to shift the terms of the debate, acknowledging that we are nation building to protect ourselves while demanding that we put the interests of the people being governed—whether in Iraq, Afghanistan, Kosovo, or elsewhere—ahead of our own when we exercise power over them. Noah Feldman argues that to prevent nation building from turning into a paternalistic, colonialist charade, we urgently need a new, humbler approach. Nation builders should focus on providing security, without arrogantly claiming any special expertise in how successful nation-states should be made. Drawing on his personal experiences in Iraq as a constitutional adviser, Feldman offers enduring insights into the power dynamics between the American occupiers and the Iraqis, and tackles issues such as Iraqi elections, the prospect of successful democratization, and the way home. Elections do not end the occupier's responsibility. Unless asked to leave, we must resist the temptation of a military pullout before a legitimately elected government can maintain order and govern effectively. But elections that create a legitimate democracy are also the only way a nation builder can put itself out of business and—eventually—send its troops home. Feldman's new afterword brings the Iraq story up-to-date since the book's original publication in 2004, and asks whether the United States has acted ethically in pushing the political process

in Iraq while failing to control the security situation; it also revisits the question of when, and how, to withdraw.
