Forklift Training Facts PS Publishing
Powered industrial trucks, commonly known as forklifts, are used in factories throughout the United States to move materials as well as finished goods. Research indicates that a failure to adequately manage the hazards/risks which are associated with the operation of a forklift, especially as it relates to providing employees with necessary training-based information, may lead to

injuries ranging from minor wounds to a fatality. As part of normal business operation, a high percentage of employees who are employed by Company XYZ are required to utilize forklifts on a routine basis throughout the facility. Past accidents which involved employees who were operating a forklift during the loss-producing event indicated the strong need for Company XYZ management to analyze the current forklift training program that is currently employed by the organization. In order to improve the practices set forth by Company XYZ, a literature review was first performed to determine the basis for a successful forklift training program. The literature review provided evidence that Company XYZ had deficiencies within the classroom pre and post-test as well as the hands-on training. The methodology utilized data collected within the literature review to construct a quiz. The quiz was then administered before and after three dissimilar styles of classroom training. The results were compared to determine which delivery method provided the strongest increase in classroom quiz scores. The methodology also included a performance evaluation to determine if training on a

specific powered industrial vehicle would allow individuals to operate similar forklifts without operating deficiencies.

The Forklifts Have Nothing To Do! provides practical methods for improving supply chain operations. Colonel Joe Walden has spent more than 30 years leading and improving supply chain operations. Improving your supply chain will improve your bottom line, regardless of your industry. His recommendations draw on examples in civilian industry and military operations, including his experiences in Operation Iraqi Freedom and his experience as a consultant to FORTUNE 500 Companies. The examples in this book demonstrate that supply chain operations in the military are very similar to supply chain operations in commercial industry. The successful management of supply chains in the military and corporations has the ability to improve operations for the organization and improve support for the customer.

Forklift Operator Training Government Institutes

OSHA has promulgated the Final Rule for

Powered Industrial Truck Operator Training [29 CFR 1910.178(l)], which became effective March 1, 1999. The standard requires operator training and licensing as well as periodic evaluations of operator performance. The standard also addresses specific training requirements for truck operation, loading, seat belts, overhead protective structures, alarms, and maintenance of industrial trucks.

Refresher training is required if the operator is observed operating the truck in an unsafe manner, is involved in an accident or near miss, or is assigned a different type of truck.

Forklift Safety

It is a requirement of The Occupational Safety and Health Administration (OSHA)

that any person who operates a forklift should receive proper training and be evaluated under a minimum set of safety standards. Carolina Trucking Academy is pleased to offer a program designed to comply with these standards to those who wish to pursue work as a forklift operator.

Safety Standard for Lift Trucks

The Powered Lift Truck Level 2 (PLT) curriculum has been developed in keeping with the prescribed Ministry of Training, Colleges and Universities (MTCU) Training Standards. The curriculum layout used provides an opportunity to cross-reference the in-school learning outcomes and content to the specific workplace Training Standards. For easy reference, a time allocation has been included for each reportable subject along with the Theory/Practical breakdown for the delivery of the Learning Content. More detailed time allocations for the instructor have been provided for each topic area to ensure consistency for each appropriate intake. The reportable subjects are Trade Practices; Electrical Systems; Computer Control Systems; Fuel Systems; Engine Systems; Chassis Systems; Frame, Drive, and Lift Systems; and Hydraulic Systems.--
