### **New Perspectives on the History of Political Economy** Routledge

The nature of the contemporary global political economy and the significance of the current crisis are a matter of wide-ranging intellectual and political debate, which has contributed to a revival of interest in Marx's critique of political economy. This book interrogates such a critique within the broader framework of the history of political economy, and offers a new appreciation of its contemporary relevance. A distinctive feature of this

study is its use of the new historical critical edition of the writings of Marx and Engels (MEGA2), their partially unpublished notebooks in particular. The sheer volume of this material forces a renewed encounter with Marx. It demonstrates that the international sphere and non-European societies had an increasing importance in his research, which developed the scientific elements elaborated by Marx's predecessors. This book questions widespread assumptions that the nation-state was the starting point for the analysis of development. It explores the international foundations of political economy, from mercantilism to Adam Smith and David Ricardo and to Hegel, and investigates how the understanding of

the international political economy informs the interpretations of history to which it gave rise. The book then traces the developments of Marx's critique of political economy from the early 1840s to Capital Volume 1 and shows that his deepening understanding of the laws of capitalist uneven and combined development allowed him to recognise the growth of a world working class. Marx's work thus offers the necessary categories to develop an alternative to methodological nationalism and Eurocentrism grounded in a critique of political economy. This book is essential reading for anyone interested in the development of Marx's thought and in the foundations of International Political Economy.

The newly industrializing countries (NICs) of East Asia have undergone rapid economic expansion over the past twenty years. Unlike NICs elsewhere in the Third World, those in the Pacific basin-South Korea, Taiwan, Singapore, and Hong Kong have managed to achieve almost full employment, a relatively egalitarian distribution of income, and the virtual elimination of poverty. In this collection of essays, nine development specialists explore the Asian NICs' exceptional ability to capitalize on the favorable economic environment of the 1960s and then to adapt flexibly to worsening conditions in the 1970s and 1980s.

**The American Political Economy**

Westview Press

This is one of a series of books on the forces that shape metropolitan areas. In particular, the series has to do with the forces that shape the largest and most complex metropolitan area in the United States, a 22-county expanse which takes in parts of three states but which, for convenience, we have termed the New York Metropolitan Region. The present volume deals with the impact of local government programs and the political processes which underlie the pattern of urban development. As such it adds the dimension of political science to the Study, though obviously it does not treat the party politics of the Region. Rather, it focuses on those public activities which seem most likely to affect the distribution of firms and households throughout the Region. / \$c Foreword, Edward S. Mason. Statement of Some New Principles of Political Economy Routledge

In the completely revised second edition of this highly praised book, Susumu Yabuki, one of Japan's leading China experts, and Stephen M. Harner, A Shanghai-based investment banker, present a comprehensive and accessible analysis of China's political economy. The authors provide dozens of easy-to-grasp and up-to-date graphs, charts, tables, and maps to illustrate the reality of China, as they explain and comment on political, economic, financial and trade trends. Placing issues in historical perspective, and with a view to trends into the twenty-first century, the authors survey the realities of China's area and population, agriculture, energy needs, pollution, industrial structure, township and village enterprises, state-owned enterprise reform, unemployment, economic regions, foreign investment, state finances, fiscal and monetary policy, China's financial institutions, foreign

financial institutions in China, stock markets, international finance, balance of payments and exchange rate policy, corporate finance, the role of Shanghai, government institution reform, foreign trade, the roles of Hong Kong and Taiwan, U.S.-China relations, and Japan-China relations. Useful as an introduction to China's economics, finance, and politics for students, and as a desktop reference volume for corporations, organizations, and individuals considering doing business in China, this unique study fills a genuine gap in the literature.

Urban education and its contexts have changed in powerful ways. Old paradigms are being eclipsed by global forces of privatization and markets and new articulations of race, class, and urban space. These factors and more set the stage for Pauline Lipman's insightful analysis of the relationship between education policy and the neoliberal economic, political, and ideological processes that are reshaping cities in the United States and around the globe. Using Chicago as a case study of the interconnectedness of neoliberal urban policies on housing, economic development, race, and education, Lipman explores larger implications for equity, justice, and "the right to the city". She draws on scholarship in critical geography, urban sociology and anthropology, education policy, and critical analyses of race. Her synthesis of these lenses gives added weight to her critical appraisal and hope for the future, offering a significant contribution to current arguments about urban schooling and how we think about relations between neoliberal education reforms and the transformation of cities. By examining the cultural politics of why and how these relationships resonate with people's lived experience, Lipman pushes the analysis one step further toward a new educational and social paradigm rooted in radical political and economic democracy.

U of Minnesota Press

This volume brings together the work of outstanding feminist scholars who reflect on the achievements of feminist political economy and the challenges it faces in the 21st century. The volume develops further some key areas of research in feminist political economy - understanding economies as gendered structures and economic crises as crises in social reproduction, as well as in finance and production; assessing economic policies through the lens of women's rights; analysing global transformations in women's work; making visible the unpaid economy in which care is provided for family and communities, and critiquing the ways in which policy makers are addressing (or failing to address) this unpaid economy.

"The" End of Capitalism (as We Knew It)

New York : Harper &amp; Row

Originating as a miniconference at the August 1988 meeting of the Rural Sociological Society in Madison, Wisconsin, 16 papers offer ideas on how agriculture can and must be reconceived in the context of global economics and food production. Among the considerations are labor, government, technology, and gender. Annotation copyrighted by Book News, Inc., Portland, OR

**Towards A New Political Economy Of Agriculture**

Routledge

Critical of the economic and political power relations in contemporary India, this book is written from the vantagepoint of the working masses whose basic economic and democratic rights remain unmet. Written for a broader audience beyond the academic community, the essays that make up the book provide short critical commentaries on different aspects of Indian society undergoing significant changes in recent times. The essays are conceptually driven and include empirical details, but they generally avoid the usual perils of academicism, by expressing complicated ideas in a relatively simple language and by drawing out their practical implications. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

**Transnational Private Governance and its Limits**

MIT Press

Originally, economics was called political economy, and those studying it readily accepted that economic decisions are made in a political world. But economics eventually separated itself from politics to

pursue rigorous methods of analyzing individual behavior and markets. Recently, an increasing number of economists have turned their attention to the old question of how politics shape economic outcomes. To date, however, this growing literature has lacked a cogent organization and a unified approach. Here, in the first full-length examination of how political forces affect economic policy decisions, Allan Drazen provides a systematic treatment, organizing the increasingly influential "new political economy" as a more established field at the highly productive intersection of economics and political science. Although he provides an extraordinarily helpful guide to the recent explosion of papers on political economy in macroeconomics, Drazen moves far beyond survey, giving definition and structure to the field. He proposes that conflict or heterogeneity of interests should be the field's essential organizing principle, because political questions arise only when people disagree over which economic policies should be enacted or how economic costs and benefits should be distributed. Further, he illustrates how heterogeneity of interests is crucial in every part of political economy. Drazen's approach allows innovative treatment--using rigorous economic models--of public goods and finance, economic growth, the open economy, economic transition, political business cycles, and all of the traditional topics of macroeconomics. This major text will have an enormous impact on students and professionals in political science as well as economics, redefining how decision makers on several continents think about the full range of macroeconomic issues and informing the approaches of the next generation of economists.

Bartels's acclaimed examination of how the American political system favors the wealthy—now fully revised and expanded. The first edition of *Unequal Democracy* was an instant classic, shattering illusions about American democracy and spurring scholarly and popular interest in the political causes and consequences of escalating economic inequality. This revised, updated, and expanded second edition includes two new chapters on the political economy of the Obama era. One presents the Great Recession as a "stress test" of the American political system by analyzing the 2008 election and the impact of Barack Obama's "New New Deal" on the economic fortunes of the rich, middle class, and poor. The other assesses the politics of inequality in the wake of the

Occupy Wall Street movement, the 2012 election, and the partisan gridlock of Obama's second term. Larry Bartels offers a sobering account of the barriers to change posed by partisan ideologies and the political power of the wealthy. He also provides new analyses of tax policy, partisan differences in economic performance, the struggle to raise the minimum wage, and inequalities in congressional representation. President Obama identified inequality as "the defining challenge of our time." *Unequal Democracy* is the definitive account of how and why our political system has failed to rise to that challenge. Now more than ever, this is a book every American needs to read.

*Building New Deal Liberalism* Westport, Conn : Greenwood Press

There are six chapters examining the strategic and economic policies of the major external powers towards Southeast Asia and two more focusing on the still unresolved conflict in Cambodia and on the continuing disputes over the ownership of the Spratly Islands. The conclusion assesses the relevance of Southeast Asian experience in the 'New World Order' to the ongoing theoretical debates about democracy, the market, the state and multilateralism.

This exploration of some of the more important frameworks used for understanding the relationship between politics and economics includes the classical, Marxian, Keynesian, neoclassical, state-centered, power-centered, and justice-centered.

A number of large-scale transformations have shaped the economy, polity and society of India over the past quarter century. This book provides a detailed account of three that are of particular importance: the advent of liberal economic reform, the ascendance of Hindu cultural nationalism, and the empowerment of historically subordinate classes through popular democratic mobilizations. Filling a gap in existing literature, the book goes beyond looking at the transformations in isolation, managing to:

- Explain the empirical linkages between these three phenomena
- Provide an account that integrates the insights of separate disciplinary perspectives
- Explain their distinct but possibly related causes and the likely consequences of these central transformations taken together

By seeking to explain the causal relationships between these central transformations through a coordinated conversation across

different disciplines, the dynamics of India's new political economy are captured. Chapters focus on the political, economic and social aspects of India in their current and historical context. The contributors use new empirical research to discuss how India's multidimensional story of economic growth, social welfare and democratic deepening is likely to develop. This is an essential text for students and researchers of India's political economy and the growth economies of Asia.

*The Political Economy of the New Asian Industrialism* Princeton University Press

This volume offers a snapshot of the resurgent historiography of political economy in the wake of the ongoing global financial crisis, and suggests fruitful new agendas for research on the political-economic nexus as it has developed in the Western world since the end of the Middle Ages. *New Perspectives on the History of Political Economy* brings together a select group of young and established scholars from a wide variety of disciplinary backgrounds—history, economics, law, and political science—in an effort to begin a re-conceptualization of the origins and history of political economy through a variety of still largely distinct but complementary historical approaches—legal and intellectual, literary and philosophical, political and economic—and from a variety of related perspectives: debt and state finance, tariffs and tax policy, the encouragement and discouragement of trade, merchant communities and companies, smuggling and illicit trades, mercantile and colonial systems, economic cultures, and the history of economic doctrines more narrowly construed. The first decade of the twenty-first century, bookended by 9/11 and a global financial crisis, witnessed the clamorous and urgent return of both 'the political' and 'the economic' to historiographical debates. It is becoming more important than ever to rethink the historical role of politics (and, indeed, of government) in business, economic production, distribution, and exchange. The artefacts of pre-modern and modern political economy, from the fourteenth through the twentieth centuries, remain monuments of perennial importance for understanding how human beings grappled with and overcame material hardship, organized their political and economic communities, won great wealth and lost it, conquered and were conquered. The present volume, assembling some of the brightest lights in the field, eloquently testifies to the rich and powerful lessons to be had from such a historical understanding of political

economy and of power in an economic age.

In this book, China-Latin America relations experts Margaret Myers and Carol Wise examine the political and economic forces that have underpinned Chinese engagement in the region, as well as the ways in which these forces have shaped economic sectors and policy-making in Latin America. The contributors begin with a review of developments in cross-Pacific statecraft, including the role of private, state-level, sub-national, and extra-regional actors that have influenced China-Latin America engagement in recent years. Part two of the book examines the variety of Latin American development trajectories borne of China's growing global presence. Contributors analyse the effects of Chinese engagement on specific economic sectors, clusters (the LAC emerging economies), and sub-regions (Central America, the Southern Cone of South America, and the Andean region). Individual case studies draw out these themes. This volume is a welcome addition to the growing body of literature on China-Latin America relations. It illuminates the complex interplay between economics and

politics that has characterized China's relations with the region as a second decade of enhanced economic engagement draws to a close. This volume is an indispensable read for students, scholars and policy makers wishing to gain new insights into the political economy of China-Latin America relations.

This book addresses the ways in which individualised, market-based models of disability support provision have been mobilised in and across different countries through cross-national investigation of individualised funding (IF) as an object of neoliberal policy mobility. Combining rich theoretical and interdisciplinary perspectives with extensive empirical research, the book provides a timely examination of the policy processes and mechanisms driving the spread of IF amongst countries at the forefront of disability policy reform. It is argued that IF's mobility is not attributable to neoliberalism alone, but to the complex intersections between neoliberal and emancipatory agendas, and to the transnational networks that have blended the two agendas in new ways in different institutional contexts. The book shows how disability rights struggles have synchronised with neoliberal agendas, which explains IF's propensity to move and mutate between different jurisdictions. Featuring first-hand accounts of the activists and advocates engaged in these struggles, the book illuminates the consequences and risks of the dangerous liaisons and political trade-offs that seemed necessary to get individualised

funding on the policy agenda for disabled people. It will be of interest to all scholars and students working in disability studies, social policy, sociology and political science more generally.

We live in a time of economic virtualism, whereby our lives are made to conform to the virtual reality of economic thought. Globalization, transnational capitalism, structural adjustment programmes and the decay of welfare are all signs of the growing power of economics, one of the most potent forces of recent decades. In the last thirty years, economics has ceased to be just an academic discipline concerned with the study of economy, and has come to be the only legitimate way to think about all aspects of society and how we order our lives. Economic models are no longer measured against the world they seek to describe, but instead the world is measured against them, found wanting and made to conform. This profound and dangerous change in the power of abstract economics to shape the lives of people in rich and poor countries alike is the subject of this interdisciplinary study. Contributors show how economics has come to portray a virtual reality - a world that seems real but is merely a reflection of a neo-classical model - and how governments, the World Bank and the IMF combine to stamp the world with a virtual image that condemns as irrational our local social and cultural arrangements. Further, it is argued that virtualism represents the worrying emergence of new forms of abstraction in the political economy, of which economics is just one example.
