From a hospital admittance to discharge to outpatient rehabilitation, Spinal Cord Injuries addresses the wide spectrum of rehabilitation interventions and administrative and clinical issues specific to patients with spinal cord injuries. Comprehensive coverage includes costs, life expectancies, acute care, respiratory care, documentation, goal setting, clinical treatment, complications, and activities of daily living associated with spinal cord patients. In addition to physical therapy interventions and family education components, this resource includes content on incidence, etiology, diagnosis, and clinical features of spinal cord injury. Case Studies with clinical application thinking exercises help you apply knowledge from the book to real life situations. Thoroughly referenced, evidence-based content provides the best evidence for treatment based on the most current research. Tables and boxes throughout each chapter organize and summarize important information for quick reference. Clinical Note boxes provide at-a-glance access to helpful tips. Over 500 clinical photos, line drawings, radiographs, and more bring important concepts to life. Highly respected experts in spinal cord injury rehabilitation, editors Sue Ann Sisto, Erica Druin, and Martha Sliwinski, provide authoritative guidance on the foundations and principles of practice for spinal cord injury. Companion DVD includes video clips of the techniques described throughout the book that demonstrate how to apply key concepts to practice.

This easy-to-use handbook is designed to assist in the evaluation and management of spinal cord injuries and the diverse related disorders and conditions. Spinal cord injuries can cause abnormalities in all body systems due to dysfunction of the somatic motor and sensory systems and damage to the autonomic nerve system. The latter gives rise to respiratory and cardiac problems, temperature regulation disorders, endocrine system disorders, and many associated metabolic disorders. Other potential consequences of spinal cord injuries include pressure injuries and various disabilities and obstacles, ranging from physical limitations to social embarrassment. This handbook offers extensive guidance on medical management in different scenarios from the acute phase to long-term care, with a particular focus on information of importance for the solution of clinical problems commonly encountered in daily practice. It will be ideal for practitioners in rehabilitation medicine, neurosurgery, orthopedics, neurology, and other relevant specialties that deal with patients with spinal cord injuries.

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.
