The Reeds Western Almanac covers the coastline from Cape Wrath to Padstow as well as the whole of Ireland, and is ideal for any boater lucky enough to cruise and race in the superb waters off the coast of Western Scotland, Ireland or Western England. It offers ready access to essential navigation information by virtue of its clear layout and user friendly format. Completely updated for 2019, topics include seamanship, pilotage, tide tables, safety procedures, navigation tips, radio, lights, waypoints, weather forecast information, communications, Mayday and distress procedures.

The spiral binding allows the Almanac to be opened flat on the chart table and the large type size and clear layout makes information easy to read even in adverse conditions. It is the complete guide for both Irish and Scottish mariners as well as those cruising the UK west coast. Includes a free Reeds Marina Guide. Also available: free supplements of up-to-date navigation changes from January to June at: [www.reedsnauticalalmanac.co.uk](http://www.reedsnauticalalmanac.co.uk) 'There are some things I would not go to sea without - Reeds is one of them.' Economic growth is highly dependent on technological progress and innovation, yet the sources from which these innovations originate are still largely misunderstood and untapped. Recent research has demonstrated that users, rather than manufacturers, are often a critical source of innovation in numerous fields from extreme sports to medical devices to software. This book systematically identifies the most important barriers to user-innovation and critically evaluates the democratization of innovation argument by critically assessing the main legal, economic, technological, and societal barriers to user-innovation for the first time and proposing alternative possibilities. Through original research the author reveals the dynamics of user-innovation and offers strategies for minimizing those factors that inhibit and stifle the spread of this phenomenon. From this analysis it becomes clear that user-innovation has become more difficult over time and that the problem is now of how manufacturers can enable users to overcome the discussed barriers and simultaneously benefit from such consumer-driven activities. Arguing that licenses are not just an important technology commercialization instrument but are tools critical to generating innovations, the author explains how licenses can in certain situations be employed to help users overcome some of the barriers to user-innovation. User-Innovation: Barriers to Democratization and IP Licensing is a practical guidebook as well as a startlingly original work of scholarship that

will be essential reading for years to come.

### PC Mag

This practical manual of amphibian ecology and conservation brings together a distinguished, international group of amphibian researchers to provide a state-of-the-art review of the many new and exciting techniques used to study amphibians and to track their conservation status and population trends. The integration of ecology and conservation is a natural outcome of the types of questions posed by these disciplines: how amphibians can and should be sampled, marked, and followed through time; how abundance and population trends are measured; what are the robust statistical methods that can be used in ecology and conservation; what roles do amphibians play in community structure and function; how do animals function in their environment; and what affects the long-term persistence of species assemblages? Although emphasizing field ecology, sections on physiological ecology, genetics, landscape ecology, and disease analysis are also included. The book describes the latest statistical approaches in amphibian field ecology and conservation, as well as the use of models in interpreting field research. Much of this information is scattered in the scientific literature or not readily available, and the intention is to provide an affordable, comprehensive synthesis for use by graduate students, researchers, and practising conservationists worldwide.
