New Oxford Textbook of Psychiatry OUP Oxford
 Explore 3 is the third and final level of a theme-based, all-in-one integrated skills and grammar series that features high-interest Canadian and international content. In total, there are 5 units and it is expected that most teachers will complete 4 units during the 45-hour program. This built-in flexibility allows teachers to focus on the units they and their students find the most stimulating, and provides more variety for teachers who teach the same course successively. Unstudied units can also become extra testing material. Explore 3 is aimed at intermediate students who want to improve their English for career purposes. The textbook contains two readings per unit, writing activities, listening activities, speaking activities, a pronunciation activity, an interpreting data activity, a revising and editing activity, and a watching activity, all of which are designed to meet the specific objectives outlined by the Quebec Ministry of Education. All themes and content in Explore have transferable connections to

both technical and pre-university B Block programs. These connections are further reinforced by field-specific activities and projects in each unit that ensure students transfer what they have learned into practical application within their field of study, using both input and output skills. This innovative textbook addresses the reality that there is rarely a common B Block demographic in CEGEPs or in individual classes. As a result, the book is designed to meet a wide variety of student needs. The goal: help teachers find common denominators that are meaningful to and manageable for the entire group, no matter students' level or field of study.

Exploring Studio Materials: Teaching Creative Art Making to Children is a transformative approach to teaching art in elementary and secondary schools. Based on the model of how real artists create their work, the text encourages teachers to work with the most common media and materials found in the Pre-K-12 curriculum. Hafeli provides a rich blend of real-life examples and suggested classroom activities in order to help fledgling art teachers learn how to implement creative arts programs that will produce exceptional results. Rather than following a structure based on preconceived ideas, the book encourages experimental techniques with the materials that teachers commonly use in elementary and secondary classrooms. Therefore, teaching methodologies emerge from the activities themselves, rather than vice versa. Based on her own research, teaching, and contemporary approaches to arts education, this approach is an effective model for bringing artistic creativity into the school curriculum. Distinctive Features * Encourages teachers to work with the most common media and materials found in the Pre-K-12 curriculum * Establishes a meaningful, organic, and creative process in which teachers are discovering along with students * Includes a rich combination of real-life examples and suggested classroom activities

Exploring Personal Genomics OUP Oxford

Rapid advances in high-throughput genome sequencing technologies foreshadow a near-future in which millions of individuals will gain affordable access to their complete genome sequence. This promises to give unprecedented insights into the fundamental biological nature of ourselves and our species: where we came from, how we are born, how we interact with our environment, how we get sick, how we get well, and how we age. Personal genomics is therefore an important component of the inevitable transition towards personalized medicine, as the medical establishment begins to explore and evaluate the role of personal genomics in health and medicine. However there is currently very little training available for medical practitioners. Exploring Personal Genomics provides a novel, inquiry-based approach to understanding and interpreting the practical, medical, and societal aspects of personal genomic information. It is presented in two parts: the first provides readers of all backgrounds with a fundamental understanding of the biology of human genomes, information on how to obtain and understand digital representations of personal genomic data, tools and techniques for exploring the personal genomics of ancestry and genealogy, discovery and interpretation of genetic trait associations, and the role of personal genomics in drug response. The second part offers more advanced readers an understanding of the science, tools, and techniques for investigating interactions between a personal genome and the environment, connecting DNA to physiology, assessing rare variants and structural variation, and exploring resources for performing personal biological investigation. This advanced textbook is primarily aimed at undergraduate and graduate students taking classes in genomic medicine, genetics, and bioinformatics. It will also be of relevance and use to medical practitioners, evolutionary biologists, geneticists and individuals interested in exploring their personal genetic data.

The crash of the Indian plate into Asia is the biggest known collision in geological history, and it continues today. The result is the Himalaya and Karakoram - one of the largest mountain ranges on Earth. The Karakoram has half of the world's highest mountains and a reputation as being one of the most remote and

savage ranges of all. In this beautifully illustrated book, Mike Searle, a geologist at the University of Oxford and one of the most experienced field geologists of our time, presents a rich account of the geological forces that were involved in creating these mountain ranges. Using his personal accounts of extreme mountaineering and research in the region, he pieces together the geological processes that formed such impressive peaks.

Using an inquiry-based approach to learning, Oxford Discover develops the communication skills and thinking skills students need for success in the 21st century. Who are your family and friends? Where can we see colors? How can we make music? Oxford Discover uses Big Questions such as these to tap into students' natural curiosity. It enables them to ask their own questions, find their own answers, and explore the world around them. This approach to language learning and literacy, supported by a controlled grammar and skills syllabus, helps students achieve near-native fluency in English. Oxford Discover gives teachers the tools to develop children's 21st century skills, creating young thinkers with great futures. Use with Show and Tell as part of 9-level course.

The thrill and chill of the ghost story is displayed in all its variety and vitality through this marvellous anthology. Ranging from the early 19th century to the 1960s, the collection reveals the development of the genre, and showcases many of its greatest expositors - from Sir Walter Scott, H. G. Wells, M. R. James, T. H. White, Walter de la Mare, and Elizabeth Bowen in the UK to Edith Wharton in America. Though its heyday coincided with the golden age of Empire in the nineteenth century, the ghost story enjoyed a second flowering between the two World Wars and its popularity is as great as ever.

In this remarkably accessible, concise, and engaging introduction to moral philosophy, Steven M. Cahn brings together a rich, balanced, and wide-ranging collection of fifty-two readings on ethical theory and contemporary moral issues. He has carefully edited all the articles to ensure that they will be exceptionally clear and understandable to undergraduate students. The selections are organized into three parts--Challenges to Morality, Moral Theories, and Moral Problems--providing instructors with flexibility in designing and teaching a variety of ethics courses. Each reading is followed by study questions. The fifth edition features twelve new articles and unparalleled representation of women philosophers, with nearly half of the essays authored or coauthored by women. A password-protected Instructor's Manual is available on the book's Ancillary Resource Center. Visit the book's free, open-access Companion Website for additional student and instructor resources.
