Mastering the 12-Lead EKG, Second Edition Elsevier Health Sciences

A state-of-the-art reference on contemporary and challenging issues in electrocardiography. Amazingly, over a century after the first use of the electrocardiogram, new ECG patterns are being discovered. And in the last few decades, several new electrocardiographic phenomena and markers have emerged that are challenging to physicians and allied professionals who read and interpret ECGs such as early repolarization, ECGs of athletes, Brugada Syndrome, short and long QT syndrome, various channelopathies, and cardiomyopathies. Internationally recognized experts discuss the most recent evidence-based information on these new observations, complemented with detailed ECG tracings, to provide essential guidance for the optimal interpretation of ECGs in the 21st century. Audience: Physicians who are involved in sports medicine, emergency department physicians, internists, ECG readers, and pediatric and adult cardiologists.

This book gathers together contributions from internationally renowned authors in the field of cardiovascular systems and provides crucial insight into the importance of sex- and gender-concepts during the analysis of patient data. This innovative title is the first to offer the elements necessary to consider sex-related properties in both clinical and basic studies regarding the heart and circulation on multiscale levels (i.e. molecular, cellular, electrophysiologically, neuroendocrine, immunoregulatory, organ, allometric, and modeling). Observed differences at (ultra)cellular and organ level are quantified, with focus on clinical relevance and implications for diagnosis and patient management. Since the cardiovascular system is of vital importance for all tissues, Sex-Specific Analysis of Cardiovascular Function is an essential source of information for clinicians, biologists, and biomedical investigators. The wide spectrum of differences described in this book will also act as an eye-opener and serve as a handbook for students, teachers, scientists and practitioners.
